Yah. I had the same experience with Amateur Electronic Supply, from
a guy named Ray Grenier,in Michigan.

Who knows a good one?

Fair Radio in Lima Ohio is good.
Dealt with them over 20 years and they have NEVER stiffed me.

I have a Hammarlund 120 that hasn't been turned on in 30 years.
It belinged to the son of Chief Gray Horse, who, I am told, was one
of the very last indians to make peace with the army, in 1950s.

A while ago I saw a site that gave a formula to calculate how long it takes to charge a NiCd battery with a charger but I didn't bookmark it so I can't find it anymore.

Here is my problem.

I have a 12V 800 mA charger and I want to charge my 12V 600 mA battery with it. How long sould I charge it in order to get a full charge when the battery has been completely depleted ?

Stay safe !

There are many issues here. In general, a stupid charger can not safely charge a NiCd at greater than about c/16 (37.5 ma in this case). You would have to use a current limiting resistor to protect the battery. Even at that rate the battery should probably not be left on the charger for more than a day or so. You didn't specify if the battery itself is designed to be fast charged. If not, then the c/16 rate is the best you can safely do. If the battery is designed to be fast charged and the charger you have is specifically designed to charge NiCd batteries, then you can reasonably expect that the battery will be fully charged in 1 to 2 hours. This requires a smart charger that shuts off when the battery gets hot or is fully charged. Since NiCd batteries are usually dealt with on a current basis rather than voltage, I would hazard a guess that your charger is actually just a power supply. It requires well over 12 volts to successfully charge a 12 volt battery. If that is the case, then you would be best off to get a charger that is intended for NiCd batteries. Unfortunately, the usual result of improper charging of NiCd batteries is to destroy the battery. Hope this helps clarify things.

Jean:
Discharge the battery completely and recharge. As you are recharging it,
monitor the battery voltage. You will see a rapid increase for the first few
minutes and then the voltage will flatten out. The battery is charged when
the voltage rapidly increases again.

I wonder if anyone out there has upgraded from a 9+ to a 599 and could
give me an honest assessment of the noise reduction feature of the 599.
I've got a 9+ and I'm wondering if the 599 is significantly different and
better at noise reduction. The 9+ works great at removing heterodynes and
narrowing bandwidth, but I'm disappointed in the random noise red.
feature. Your opinions would be most appreciated. Many thanks and best

Yep. Our radio club is embarking on a one-tube transmitter construction
project (somewhat difficult today due to a lack of available parts and lack
of disposable time). One of the larger growth-groups in ham radio is
interest in AM or "boatanchors". Old equipment requires simple maintenance
and rebuilding/restoring.

I love the radio, but the 290 memories is a farce. There can only either be 142 or 52 memories. I don't know how they even arrive at 290. I am sure there is some distorted explanation by Yaesu how they claim the 290 memories. I can't figure it out or for that matter am not going to try. It is just one of those so close to false advertising things that in a court of law they could some how prove that it does have 290 by using a pie R squared calculation. Sorry I couldn't be of more help, but I can't figure it out either.

> 73
> David Panek KE4MLV
> dpanek@mindspring.com

I doubt the panels are really rated at 230 mils...they are a little
small to carry that rating at 18 volts. I have some that are 12 inches
by 48 inches that are rated at 750 ma at 18 volts. Solar panels differ
in type, though, and you need to see a factory rating that you can
believe.
Also, the sun is at it's lowest angle this time of year, reducing
somewhat the energy delivered per square inch, although I don't believe
there is any way that could make a x10 difference. I suspect yours are
misrated. Presumably you oriented them for maximum sunlight exposure,
wthout interference and at right angles to the sun.
Also one type of cell (there are 2 types that I know of) loses
effectiveness with age and useage. Are they old and well used?

> All you get is a kind of bubbly sound with a little
> noise reduction.

You've just described what I don't like about the NR1 operation in my TS-570D. My JPS NIR-12, on the otherhand, does not produce the "bubbly sound" and does a credible job of noise reduction, assuming I set it up right. Not perfect, but it sure does reduce the stress from listening to the noise and makes full copy much easier.

Phil

> 73 Michel Morin.

Michael, I can't let that one pass!

I would guess that you haven't tried a JPS NIR-12. With mine I can eliminate 90%+ of noise and still recover a very usable phone or cw signal. It uses two separate reduction algorithms with dual processor chips, and either alone does a great job. But with the NIR-12, you can use both concurrently, as well as bandpass filtering AND notch filtering for heterodynes.

I have heard that the Radio Shack unit is a bummer, but too many of us swear by the NIR-12 to agree with your blanket condemnation.

Source record: 158575

I'm content with my Timewave DSP 9+ DSP. Makes a heck of a difference on really weak CW/Data or voice, makes the difference between copy and non-copy. The RTTY is regenerated for solid text, NO QRN or QRM- just the tones. Switch out the 9+ and my TU and ears can barley make out any presence of signal. No "bubbly" or "swirly".

BUT, download K6STI's DSP Blaster (demo version). It uses your sound card in your 486DX or better PC. His program features spectrum scope(s), block diagrams of all filter and AGC stages. ALL are adjustable. Runs in the "background" on Windows 95.

Now THIS is a DSP!!!! The "Coherent" CW DSP mode brings out CW that you wouldn't even believe is in the QRN!! Signals fade to inaudible without the DSP and re-appear to almost solid copy when switched "in". SSB Voice is easily tailors for comfortable copy - noisy evening 75 SSB nets sound like full-quieting 2 FM (@ssholes included - no filter for that... maybe the next version)!

Highly recommend it. It'll make you a believer in DSP for sure!! It blows away any "stand-alone" DSP box out there.

Oh, don't waste your money on a expensive 32 bit or 64 bit sound card, all you need is the $50 16 bit "Creative Labs" card. The 32 and 64 are fine but enhance nothing for signal processing.

Get your free demo, then decide:
go to:
http://www.megalink.net/~n1rct/db/dbindex.html
and download the DSP Blaster.

Just my opinion, I don't know the guy or get any monetary gain..... Just comfortable listening. Give your 3-500Z's a rest.

Scott KD6CQ

I don't think that tin foil should be used....
A standard 12V bayonet base buld will be just fine... The
original bulb was a Stanley 16V bulb.... It was ment to:
protect the Rx Front end, from extreme rf overload..?

It is a good place to look at first....
Also the antenna relay in the tube compartment is a:
dp/dt relay... only one half of the relay is being used....
If the contact is bad on the used side, take the bottom of the
rig off an move the leads to the previously unused side of the relay.

The main relay next to the Vox board inside the rig , near left side
of the vfo; is prone to going South as old as most of these rigs are
now...

Good luck

Tom /KD4QHH

=0AFrom: "Bubba" <kf9yh@netnitco.net>=0D=0ASubject: Icom IC-756A???=0D=0A=
=0D=0A>use do not impress me. Give me something I can use. For=0D=0A>instan=

ce, someone said that Icom Tx audio is tailored for=0D=0A>DXing. That's nic=
e, but how about adding a button that=0D=0A>permits the user to select a li=
ttle better EQ for=0D=0A>ragchewing? THAT would be a feature I would find v=
aluable in=0D=0A>a low priced ham rig.=0D=0A=0D=0A=0D=0A Yaesu has included=
a few things in the FT-920 that I did find=0D=0Auseful. It allows four dif=
ferent EQ settings, which do change=0D=0Athe audio considerably.=0D=0A It a=
lso has a built-in digital voice recorder, which I realize is=0D=0Anot for =
everyone, but I am somewhat of a contester, and I=0D=0Aabsolutely love it.=
=0D=0A The 920 also will increment serial numbers from it's CW memory=0D=0A=
keyer. Another contester plus. Again, I realize it's not for everyone,=0D=
=0Abut then again, you can't build a radio for "everyone".=0D=0A=0D=0AHappy=

Dec 1997 09:00:45 -0600=0D=0AFrom: Ed Picha <edpi@mcs.com>=0D=0ASubject: Ka=
china 505DSP- 1st impressions (kinda long)=0D=0A=0D=0AHey folks...=0D=0A=0D=
=0AThere=92s been a bit of interest in the Kachina 505DSP on this newsgroup=
,=0D=0Aso =0D=0AI thought I would share my experiences with this rig after =
a few weeks=0D=0Aof playing with it. I won=92t dwell on the specs or featu=
res since they=0D=0Aare fairly well described on the Kachina web page,=0D=
=0Ahttp://www.kachina-az.com, and in the full page ads in QST.=0D=0A=0D=0AO=
verall, the radio performs well, meets all the specs I have been able=0D=0A=
to test, and is a=0D=0Areal blast to play with. I have gotten used to the =
tuning scheme of=0D=0Ausing a mouse to click UP or DOWN on the digit to be =
changed, and=0D=0Aalthough it=92s hard to get used to at first, it does gro=
w on you. I=0D=0Ahaven=92t experienced any problems due to noise generated=
by the computer=0D=0Aor monitor.=0D=0A=0D=0AI=92ve controlled the radio wi=
th two W95 machines (no-name P100 and IBM=0D=0AThinkpad 760ED laptop) with =
no problems. Control is very real-time,=0D=0Awith no noticeable lag betwee=
n activating a control and hearing the=0D=0Aeffect in the radio. The user =
interface is very intuitive, and it=0D=0Adoesn=92t take long at all to get =
comfortable using the radio. You can do=0D=0Amost operation either with the=
mouse or with keyboard. If you get lost,=0D=0Athere=92s a =93cheat sheet=
=94 with most of the major single-keystroke=0D=0Acommands, and there=92s al=
ways the pull-down help that goes into more=0D=0Adetail. You can download a=
demo version of the software that will give=0D=0Ayou a good feeling for ho=
w it works from Kachina'a web site.=0D=0A=0D=0AI did some basic bench chec=

ks, and the radio was well within specs for=0D=0Apower-out and receive sens=
itivity. I plan to do more detailed tests=0D=0A(particularly on receiver p=
erformance) when I can get the equipment=0D=0Atogether at work.=0D=0A=0D=0A=
I did my own little PA torture tests by running the radio for 24 hours,=0D=
=0ACW full power out into a dummy load, keyed by a memory keyer in beacon=
=0D=0Amode. I also tested continuous duty PA performance by keying in CW m=
ode=0D=0Acontinuously for 30 minutes. In both tests, there was no power ou=
tput=0D=0Aslump, and the PA temperature stayed under +50 C.=0D=0A=0D=0ALIKE=
S:=0D=0ADSP-based noise reduction can be very effective! Likewise the auto=
matic=0D=0Anotch.=0D=0A=0D=0AAbility to tailor transmit audio response is a=
nice feature. I=92ve=0D=0Agotten many unsolicited positive comments on th=
e general audio quality,=0D=0Aboth with the speech processor and without.=
=0D=0A=0D=0ASpectrum analyzer is useful, and it=92s slick to be able to cli=
ck on a=0D=0Asignal you see in the analyzer window and have the radio autom=
agically=0D=0Atuned to that frequency.=0D=0A=0D=0AI like the idea of a cali=
brated S-meter that is accurate on all bands. =0D=0A(I checked...it=92s wel=
l within the claimed +/- 5 dB accuracy). It=92s also=0D=0Anice to be able =
to configure the S-meter to read in dBm, uV, or S units.=0D=0A=0D=0AThere a=
re two antenna ports that you can assign by band, or use one for=0D=0Atrans=
mit and one for receive. This setup accommodates the typical=0D=0Ainstalla=
tion where you have a wire antenna for 80/40 and a beam for the=0D=0Ahigher=
frequency bands=0D=0A=0D=0AThe squelch operation is neat...there are two m=
odes, level and=0D=0Asyllabic. With level, you can set the absolute level =
for squelch=0D=0Athreshold. With syllabic squelch, the radio looks for sig=
nals that have=0D=0Acharacteristics of voice. In case you=92re wondering w=
hat good a squelch=0D=0Afeature is on an HF radio, I use it for scanning of=
shortwave utility=0D=0Afrequencies. Speaking of scanning, it works pretty=
well too, although=0D=0Athe scan speed could be improved. The minimum =93=
dwell time=94 is 200 mS,=0D=0Aso the maximum scan rate is something like 5 =
channels per second. In=0D=0Aaddition to scanning the 100 programmable cha=
nnels, you can scan a=0D=0Aprogrammable frequency range.=0D=0A=0D=0AThe cho=
ice of IF filters (Hz):=0D=0A=0D=0A6000, 3500, 2700, 2400, 2100, 1700, 1000=
, 500, 200, 100, DATAHI, DATAMED=0D=0A=0D=0A is OK, and the filters work we=
ll. It would have been nice to have=0D=0Acontinuously variable filtering l=
ike some of the external DSP boxes=0D=0Ahave. The DATA filters are 500 Hz =
wide, and have center frequencies of=0D=0A2210 Hz (DATA HI) and 1700 Hz (DA=
TA MED). Center freqs can be moved=0D=0Ausing IF shift.=0D=0A=0D=0AAlmost =
everything you could want for interfacing the radio is brought=0D=0Aout on =
three accessory connectors. Connectors are provided for=0D=0Aaudio/PTT/mis=
c (DB25), antenna tuner (DB9) and external amplifier=0D=0Acontrol (DB15). =
Nice that they used three different sized connectors so=0D=0Athat there=92s=
no way to screw up by plugging the wrong connector in the=0D=0Awrong jack.=
=0D=0A=0D=0ADISLIKES:=0D=0A=0D=0AThe =93whisper=94 fan on the PA is notice=
ably loud and is not=0D=0Athermostatically controlled. Instead it runs all=
the time. Fan noise=0D=0Ais a function of main supply voltage...at 12 V, =
it=92s pretty quiet. By=0D=0Athe time you run it at 13.8V, it=92s pretty n=
oisy.=0D=0A=0D=0AThere=92s no FM mode.=0D=0A=0D=0AThere=92s no low-level RF=
jacks for transverter operation. =0D=0A=0D=0AThe manual is light, no discu=
ssion of operation. However, you can get a=0D=0Agood theory of operation s=
ection from the Kachina web page and Kachina=0D=0Awill send schematics on r=

equest. There is currently no service manual=0D=0Aavailable. By the way, t=
he folks at Kachina have been VERY responsive,=0D=0Aboth by email and by te=
lephone.=0D=0A=0D=0AWhy doesn=92t notch, IF shift, and noise reduction work=
in AM mode? Also,=0D=0Ayou have no choice of filtering in AM....6 KHz is =
it, like it or not.=0D=0A=0D=0AOn CW, you can select right-handed keyer, le=
ft-handed keyer or straight=0D=0Akey modes. (Nice touch, accommodating pad=
dles wired any which way!)=0D=0AWhen you select straight key and use an ext=
ernal keyer, it appears that=0D=0Athe self-completing feature of the keyer=
is still active. If you have=0D=0Athe external keyer set to a speed that =
is FASTER than the speed set on=0D=0Athe internal keyer, the radio does not=
follow the external keying very=0D=0Awell. The simple workaround is to se=
t the internal keyer speed to max=0D=0A(80WPM) when using an external keyer=
.=0D=0A=0D=0AI can=92t find a way to generate a continuous TUNE signal shor=
t of=0D=0Aplugging a good old straight key into the jack.=0D=0A=0D=0AAntenn=
a tuner is not very robust...not much range of z match, and it=0D=0Awould =
be nice if it could work outside the ham bands. To be fair, they=0D=0Aadver=
tise it to be used with VSWRs of 3:1 or less. Looks like it will be=0D=0Aea=
sy to interface homebrewed autotuners.=0D=0AYou may as well skip the $239 f=
or the internal tuner and cobble up your=0D=0Aown. By the way, the interna=
l tuner is currently sold as a=0D=0Auser-installed option by AES. It goes =
in very easily.=0D=0A=0D=0AThe control software is not smart enough to dete=
ct minimized previous=0D=0Aversions. If you run more than one version of th=
e control software, the=0D=0Aoperation becomes very unstable.=0D=0A=0D=0AA =
relay was used for TR switching...solid-state switching would have=0D=0Abee=
n nice. The relay makes QSK a bit clumsy and noisy, but it does seem=0D=0At=
o work pretty well (with limited testing) up to about 30 WPM.=0D=0A=0D=0AAn=
yway, that=92s my initial take on the 505DSP. So far I like it and I=92m=
=0D=0Aglad I bought it. If you have any specific questions, I=92d be glad =

20=0D=0A=0D=0AHere it is. The TS -570 is great long as you own stock in t=
he 3 volt=0D=0Alithium battery companies. For some reason this radio goes t=
hrough batteries=0D=0Aevery 3 months. There are=0D=0Avarious messages from =
Kenwood and many people have sent their radios back=0D=0Aand forth to Kenw=
ood with no improvement. I would reccomend waiting till=0D=0AKenwood figure=
s out=0D=0Athe "REAL PROBEM".=0D=0A The IC-756 will be going up in price to=
$2400 on January 1st, 1998 to make=0D=0Aroom for the IC-746 radio. If you =
want the IC-756 then get it now. OTherwise=0D=0Await for the IC-746 which i=
s similar with 2 meters allwmode at 100 Watts.=0D=0ANICE.=0D=0A=0D=0AThe FT=
-920 is nice but beware of all the options Yaesu sticks it to you! You=0D=
=0Ahave to pay extra for :CTCSS encoding, FM (please guys), AM filter. To b=
e=0D=0Afair they give you the=0D=0APC interface built in for free.=0D=0A=0D=
=0AI would reccomend going to a local Ham store and trying them all side by=
=0D=0Aside.=0D=0A=0D=0A Cheers, Ausin Powers=0D=0A=0D=0AScott Colgrove wr=
ote:=0D=0A=0D=0A> Which one to buy? Can anyone comment on recent QST or ot=
her reviews of=0D=0A> these radios? Anyone own one of these radios and wou=
ld recommend for or=0D=0A> against?=0D=0A>=0D=0A> Any information would hel=

?=3D0D=3D0A=3D=0D=0A=3D0D=3D0A>use do not impress me. Give me something I c=
an use. For=3D0D=3D0A>instan=3D=0D=0Ace, someone said that Icom Tx audio is=
tailored for=3D0D=3D0A>DXing. That's nic=3D=0D=0Ae, but how about adding a=
button that=3D0D=3D0A>permits the user to select a li=3D=0D=0Attle better =
EQ for=3D0D=3D0A>ragchewing? THAT would be a feature I would find v=3D=0D=
=0Aaluable in=3D0D=3D0A>a low priced ham rig.=3D0D=3D0A=3D0D=3D0A=3D0D=3D0A=
Yaesu has included=3D=0D=0A a few things in the FT-920 that I did find=3D0=
D=3D0Auseful. It allows four dif=3D=0D=0Aferent EQ settings, which do chang=
e=3D0D=3D0Athe audio considerably.=3D0D=3D0A It a=3D=0D=0Also has a built-i=
n digital voice recorder, which I realize is=3D0D=3D0Anot for =3D=0D=0Aever=
yone, but I am somewhat of a contester, and I=3D0D=3D0Aabsolutely love it.=
=3D=0D=0A=3D0D=3D0A The 920 also will increment serial numbers from it's CW=
memory=3D0D=3D0A=3D=0D=0Akeyer. Another contester plus. Again, I realize i=
t's not for everyone,=3D0D=3D=0D=0A=3D0Abut then again, you can't build a r=
adio for "everyone".=3D0D=3D0A=3D0D=3D0AHappy=3D=0D=0A Holidays=3D0D=3D0ABo=

AFrom: Ed Picha <edpi@mcs.com>=3D0D=3D0ASubject: Ka=3D=0D=0Achina 505DSP- 1=
st impressions (kinda long)=3D0D=3D0A=3D0D=3D0AHey folks...=3D0D=3D0A=3D0D=
=3D=0D=0A=3D0AThere=3D92s been a bit of interest in the Kachina 505DSP on t=
his newsgroup=3D=0D=0A,=3D0D=3D0Aso =3D0D=3D0AI thought I would share my ex=
periences with this rig after =3D=0D=0Aa few weeks=3D0D=3D0Aof playing with=
it. I won=3D92t dwell on the specs or featu=3D=0D=0Ares since they=3D0D=
=3D0Aare fairly well described on the Kachina web page,=3D0D=3D=0D=0A=3D0Ah=
ttp://www.kachina-az.com, and in the full page ads in QST.=3D0D=3D0A=3D0D=
=3D0AO=3D=0D=0Averall, the radio performs well, meets all the specs I have =
been able=3D0D=3D0A=3D=0D=0Ato test, and is a=3D0D=3D0Areal blast to play w=
ith. I have gotten used to the =3D=0D=0Atuning scheme of=3D0D=3D0Ausing a =
mouse to click UP or DOWN on the digit to be =3D=0D=0Achanged, and=3D0D=3D0=
Aalthough it=3D92s hard to get used to at first, it does gro=3D=0D=0Aw on y=
ou. I=3D0D=3D0Ahaven=3D92t experienced any problems due to noise generated=

=3D=0D=0A by the computer=3D0D=3D0Aor monitor.=3D0D=3D0A=3D0D=3D0AI=3D92ve =
controlled the radio wi=3D=0D=0Ath two W95 machines (no-name P100 and IBM=
=3D0D=3D0AThinkpad 760ED laptop) with =3D=0D=0Ano problems. Control is ver=
y real-time,=3D0D=3D0Awith no noticeable lag betwee=3D=0D=0An activating a =
control and hearing the=3D0D=3D0Aeffect in the radio. The user =3D=0D=0Ain=
terface is very intuitive, and it=3D0D=3D0Adoesn=3D92t take long at all to =
get =3D=0D=0Acomfortable using the radio. You can do=3D0D=3D0Amost operatio=
n either with the=3D=0D=0A mouse or with keyboard. If you get lost,=3D0D=
=3D0Athere=3D92s a =3D93cheat sheet=3D=0D=0A=3D94 with most of the major si=
ngle-keystroke=3D0D=3D0Acommands, and there=3D92s al=3D=0D=0Aways the pull-=
down help that goes into more=3D0D=3D0Adetail. You can download a=3D=0D=0A =
demo version of the software that will give=3D0D=3D0Ayou a good feeling for=
ho=3D=0D=0Aw it works from Kachina'a web site.=3D0D=3D0A=3D0D=3D0AI did s=
ome basic bench chec=3D=0D=0Aks, and the radio was well within specs for=3D=
0D=3D0Apower-out and receive sens=3D=0D=0Aitivity. I plan to do more detai=
led tests=3D0D=3D0A(particularly on receiver p=3D=0D=0Aerformance) when I c=
an get the equipment=3D0D=3D0Atogether at work.=3D0D=3D0A=3D0D=3D0A=3D=0D=
=0AI did my own little PA torture tests by running the radio for 24 hours,=
=3D0D=3D=0D=0A=3D0ACW full power out into a dummy load, keyed by a memory k=
eyer in beacon=3D=0D=0A=3D0D=3D0Amode. I also tested continuous duty PA pe=
rformance by keying in CW m=3D=0D=0Aode=3D0D=3D0Acontinuously for 30 minute=
s. In both tests, there was no power ou=3D=0D=0Atput=3D0D=3D0Aslump, and t=
he PA temperature stayed under +50 C.=3D0D=3D0A=3D0D=3D0ALIKE=3D=0D=0AS:=3D=
0D=3D0ADSP-based noise reduction can be very effective! Likewise the auto=
=3D=0D=0Amatic=3D0D=3D0Anotch.=3D0D=3D0A=3D0D=3D0AAbility to tailor transmi=
t audio response is a=3D=0D=0A nice feature. I=3D92ve=3D0D=3D0Agotten many=
unsolicited positive comments on th=3D=0D=0Ae general audio quality,=3D0D=
=3D0Aboth with the speech processor and without.=3D=0D=0A=3D0D=3D0A=3D0D=3D=
0ASpectrum analyzer is useful, and it=3D92s slick to be able to cli=3D=0D=
=0Ack on a=3D0D=3D0Asignal you see in the analyzer window and have the radi=
o autom=3D=0D=0Aagically=3D0D=3D0Atuned to that frequency.=3D0D=3D0A=3D0D=
=3D0AI like the idea of a cali=3D=0D=0Abrated S-meter that is accurate on a=
ll bands. =3D0D=3D0A(I checked...it=3D92s wel=3D=0D=0Al within the claimed =
+/- 5 dB accuracy). It=3D92s also=3D0D=3D0Anice to be able =3D=0D=0Ato con=
figure the S-meter to read in dBm, uV, or S units.=3D0D=3D0A=3D0D=3D0AThere=
a=3D=0D=0Are two antenna ports that you can assign by band, or use one for=
=3D0D=3D0Atrans=3D=0D=0Amit and one for receive. This setup accommodates t=
he typical=3D0D=3D0Ainstalla=3D=0D=0Ation where you have a wire antenna for=
80/40 and a beam for the=3D0D=3D0Ahigher=3D=0D=0A frequency bands=3D0D=3D0=
A=3D0D=3D0AThe squelch operation is neat...there are two m=3D=0D=0Aodes, le=
vel and=3D0D=3D0Asyllabic. With level, you can set the absolute level =3D=
=0D=0Afor squelch=3D0D=3D0Athreshold. With syllabic squelch, the radio loo=
ks for sig=3D=0D=0Anals that have=3D0D=3D0Acharacteristics of voice. In ca=
se you=3D92re wondering w=3D=0D=0Ahat good a squelch=3D0D=3D0Afeature is on=
an HF radio, I use it for scanning of=3D=0D=0A shortwave utility=3D0D=3D0A=
frequencies. Speaking of scanning, it works pretty=3D=0D=0A well too, alth=
ough=3D0D=3D0Athe scan speed could be improved. The minimum =3D93=3D=0D=0A=
dwell time=3D94 is 200 mS,=3D0D=3D0Aso the maximum scan rate is something l=
ike 5 =3D=0D=0Achannels per second. In=3D0D=3D0Aaddition to scanning the 1=
00 programmable cha=3D=0D=0Annels, you can scan a=3D0D=3D0Aprogrammable fre=

quency range.=3D0D=3D0A=3D0D=3D0AThe cho=3D=0D=0Aice of IF filters (Hz):=3D=
0D=3D0A=3D0D=3D0A6000, 3500, 2700, 2400, 2100, 1700, 1000=3D=0D=0A, 500, 20=
0, 100, DATAHI, DATAMED=3D0D=3D0A=3D0D=3D0A is OK, and the filters work we=
=3D=0D=0All. It would have been nice to have=3D0D=3D0Acontinuously variabl=
e filtering l=3D=0D=0Aike some of the external DSP boxes=3D0D=3D0Ahave. Th=
e DATA filters are 500 Hz =3D=0D=0Awide, and have center frequencies of=3D0=
D=3D0A2210 Hz (DATA HI) and 1700 Hz (DA=3D=0D=0ATA MED). Center freqs can =
be moved=3D0D=3D0Ausing IF shift.=3D0D=3D0A=3D0D=3D0AAlmost =3D=0D=0Aeveryt=
hing you could want for interfacing the radio is brought=3D0D=3D0Aout on =
=3D=0D=0Athree accessory connectors. Connectors are provided for=3D0D=3D0A=
audio/PTT/mis=3D=0D=0Ac (DB25), antenna tuner (DB9) and external amplifier=
=3D0D=3D0Acontrol (DB15). =3D=0D=0ANice that they used three different siz=
ed connectors so=3D0D=3D0Athat there=3D92s=3D=0D=0A no way to screw up by p=
lugging the wrong connector in the=3D0D=3D0Awrong jack.=3D=0D=0A=3D0D=3D0A=
=3D0D=3D0ADISLIKES:=3D0D=3D0A=3D0D=3D0AThe =3D93whisper=3D94 fan on the PA=
is notice=3D=0D=0Aably loud and is not=3D0D=3D0Athermostatically controlle=
d. Instead it runs all=3D=0D=0A the time. Fan noise=3D0D=3D0Ais a functio=
n of main supply voltage...at 12 V, =3D=0D=0Ait=3D92s pretty quiet. By=3D0=
D=3D0Athe time you run it at 13.8V, it=3D92s pretty n=3D=0D=0Aoisy.=3D0D=3D=
0A=3D0D=3D0AThere=3D92s no FM mode.=3D0D=3D0A=3D0D=3D0AThere=3D92s no low-l=
evel RF=3D=0D=0A jacks for transverter operation. =3D0D=3D0A=3D0D=3D0AThe m=
anual is light, no discu=3D=0D=0Assion of operation. However, you can get =
a=3D0D=3D0Agood theory of operation s=3D=0D=0Aection from the Kachina web p=
age and Kachina=3D0D=3D0Awill send schematics on r=3D=0D=0Aequest. There is=
currently no service manual=3D0D=3D0Aavailable. By the way, t=3D=0D=0Ahe =
folks at Kachina have been VERY responsive,=3D0D=3D0Aboth by email and by t=
e=3D=0D=0Alephone.=3D0D=3D0A=3D0D=3D0AWhy doesn=3D92t notch, IF shift, and =
noise reduction work=3D=0D=0A in AM mode? Also,=3D0D=3D0Ayou have no choic=
e of filtering in AM....6 KHz is =3D=0D=0Ait, like it or not.=3D0D=3D0A=3D0=
D=3D0AOn CW, you can select right-handed keyer, le=3D=0D=0Aft-handed keyer =
or straight=3D0D=3D0Akey modes. (Nice touch, accommodating pad=3D=0D=0Adle=
s wired any which way!)=3D0D=3D0AWhen you select straight key and use an ex=
t=3D=0D=0Aernal keyer, it appears that=3D0D=3D0Athe self-completing featur=
e of the keyer=3D=0D=0A is still active. If you have=3D0D=3D0Athe external=
keyer set to a speed that =3D=0D=0Ais FASTER than the speed set on=3D0D=3D=
0Athe internal keyer, the radio does not=3D=0D=0A follow the external keyin=
g very=3D0D=3D0Awell. The simple workaround is to se=3D=0D=0At the interna=
l keyer speed to max=3D0D=3D0A(80WPM) when using an external keyer=3D=0D=0A=
.=3D0D=3D0A=3D0D=3D0AI can=3D92t find a way to generate a continuous TUNE s=
ignal shor=3D=0D=0At of=3D0D=3D0Aplugging a good old straight key into the =
jack.=3D0D=3D0A=3D0D=3D0AAntenn=3D=0D=0Aa tuner is not very robust...not mu=
ch range of z match, and it=3D0D=3D0Awould =3D=0D=0Abe nice if it could wo=
rk outside the ham bands. To be fair, they=3D0D=3D0Aadver=3D=0D=0Atise it t=
o be used with VSWRs of 3:1 or less. Looks like it will be=3D0D=3D0Aea=3D=
=0D=0Asy to interface homebrewed autotuners.=3D0D=3D0AYou may as well skip =
the $239 f=3D=0D=0Aor the internal tuner and cobble up your=3D0D=3D0Aown. =
By the way, the interna=3D=0D=0Al tuner is currently sold as a=3D0D=3D0Ause=
r-installed option by AES. It goes =3D=0D=0Ain very easily.=3D0D=3D0A=3D0D=
=3D0AThe control software is not smart enough to dete=3D=0D=0Act minimized =
previous=3D0D=3D0Aversions. If you run more than one version of th=3D=0D=0A=

e control software, the=3D0D=3D0Aoperation becomes very unstable.=3D0D=3D0A=
=3D0D=3D0AA =3D=0D=0Arelay was used for TR switching...solid-state switchin=
g would have=3D0D=3D0Abee=3D=0D=0An nice. The relay makes QSK a bit clumsy =
and noisy, but it does seem=3D0D=3D0At=3D=0D=0Ao work pretty well (with lim=
ited testing) up to about 30 WPM.=3D0D=3D0A=3D0D=3D0AAn=3D=0D=0Ayway, that=
=3D92s my initial take on the 505DSP. So far I like it and I=3D92m=3D=0D=
=0A=3D0D=3D0Aglad I bought it. If you have any specific questions, I=3D92d=
be glad =3D=0D=0Ato=3D0D=3D0Atry and answer them.=3D0D=3D0A73...=3D0D=3D0A=

From: cdurand@tri.com
Subject: Extended Receive Standard?

Here is a question? Why don't amateur radio equipment manufacturers
build all their units with extended receive standard? I know some
companies do already, but not all. I know I would like to have extended
receive on a few of my radios and could care less about extended
```

transmit. I myself see no reason why someone should be able to transmit on the local cops repeater for any reason. If you have a reason the cops will give you a radio.

Just a thought, I just finished reading a story about a kid you was jamming the local police with his handheld and thought he might not have done it if the option hadn't been so easily obtained.

AFrom: Ed Picha <edpi@mcs.com>=3D0D=3D0ASubject: Ka=3D=0D=0Achina 505DSP- 1=
st impressions (kinda long)=3D0D=3D0A=3D0D=3D0AHey folks...=3D0D=3D0A=3D0D=
=3D=0D=0A=3D0AThere=3D92s been a bit of interest in the Kachina 505DSP on t=
his newsgroup=3D=0D=0A,=3D0D=3D0Aso =3D0D=3D0AI thought I would share my ex=
periences with this rig after =3D=0D=0Aa few weeks=3D0D=3D0Aof playing with=

it. I won=3D92t dwell on the specs or featu=3D=0D=0Ares since they=3D0D=
=3D0Aare fairly well described on the Kachina web page,=3D0D=3D=0D=0A=3D0Ah=
ttp://www.kachina-az.com, and in the full page ads in QST.=3D0D=3D0A=3D0D=
=3D0AO=3D=0D=0Averall, the radio performs well, meets all the specs I have =
been able=3D0D=3D0A=3D=0D=0Ato test, and is a=3D0D=3D0Areal blast to play w=
ith. I have gotten used to the =3D=0D=0Atuning scheme of=3D0D=3D0Ausing a =
mouse to click UP or DOWN on the digit to be =3D=0D=0Achanged, and=3D0D=3D0=
Aalthough it=3D92s hard to get used to at first, it does gro=3D=0D=0Aw on y=
ou. I=3D0D=3D0Ahaven=3D92t experienced any problems due to noise generated=
=3D=0D=0A by the computer=3D0D=3D0Aor monitor.=3D0D=3D0A=3D0D=3D0AI=3D92ve =
controlled the radio wi=3D=0D=0Ath two W95 machines (no-name P100 and IBM=
=3D0D=3D0AThinkpad 760ED laptop) with =3D=0D=0Ano problems. Control is ver=
y real-time,=3D0D=3D0Awith no noticeable lag betwee=3D=0D=0An activating a =
control and hearing the=3D0D=3D0Aeffect in the radio. The user =3D=0D=0Ain=
terface is very intuitive, and it=3D0D=3D0Adoesn=3D92t take long at all to =
get =3D=0D=0Acomfortable using the radio. You can do=3D0D=3D0Amost operatio=
n either with the=3D=0D=0A mouse or with keyboard. If you get lost,=3D0D=
=3D0Athere=3D92s a =3D93cheat sheet=3D=0D=0A=3D94 with most of the major si=
ngle-keystroke=3D0D=3D0Acommands, and there=3D92s al=3D=0D=0Aways the pull-=
down help that goes into more=3D0D=3D0Adetail. You can download a=3D=0D=0A =
demo version of the software that will give=3D0D=3D0Ayou a good feeling for=
ho=3D=0D=0Aw it works from Kachina'a web site.=3D0D=3D0A=3D0D=3D0AI did s=
ome basic bench chec=3D=0D=0Aks, and the radio was well within specs for=3D=
0D=3D0Apower-out and receive sens=3D=0D=0Aitivity. I plan to do more detai=
led tests=3D0D=3D0A(particularly on receiver p=3D=0D=0Aerformance) when I c=
an get the equipment=3D0D=3D0Atogether at work.=3D0D=3D0A=3D0D=3D0A=3D=0D=
=0AI did my own little PA torture tests by running the radio for 24 hours,=
=3D0D=3D=0D=0A=3D0ACW full power out into a dummy load, keyed by a memory k=
eyer in beacon=3D=0D=0A=3D0D=3D0Amode. I also tested continuous duty PA pe=
rformance by keying in CW m=3D=0D=0Aode=3D0D=3D0Acontinuously for 30 minute=
s. In both tests, there was no power ou=3D=0D=0Atput=3D0D=3D0Aslump, and t=
he PA temperature stayed under +50 C.=3D0D=3D0A=3D0D=3D0ALIKE=3D=0D=0AS:=3D=
0D=3D0ADSP-based noise reduction can be very effective! Likewise the auto=
=3D=0D=0Amatic=3D0D=3D0Anotch.=3D0D=3D0A=3D0D=3D0AAbility to tailor transmi=
t audio response is a=3D=0D=0A nice feature. I=3D92ve=3D0D=3D0Agotten many=
unsolicited positive comments on th=3D=0D=0Ae general audio quality,=3D0D=
=3D0Aboth with the speech processor and without.=3D=0D=0A=3D0D=3D0A=3D0D=3D=
0ASpectrum analyzer is useful, and it=3D92s slick to be able to cli=3D=0D=
=0Ack on a=3D0D=3D0Asignal you see in the analyzer window and have the radi=
o autom=3D=0D=0Aagically=3D0D=3D0Atuned to that frequency.=3D0D=3D0A=3D0D=
=3D0AI like the idea of a cali=3D=0D=0Abrated S-meter that is accurate on a=
ll bands. =3D0D=3D0A(I checked...it=3D92s wel=3D=0D=0Al within the claimed =
+/- 5 dB accuracy). It=3D92s also=3D0D=3D0Anice to be able =3D=0D=0Ato con=
figure the S-meter to read in dBm, uV, or S units.=3D0D=3D0A=3D0D=3D0AThere=
a=3D=0D=0Are two antenna ports that you can assign by band, or use one for=
=3D0D=3D0Atrans=3D=0D=0Amit and one for receive. This setup accommodates t=
he typical=3D0D=3D0Ainstalla=3D=0D=0Ation where you have a wire antenna for=
80/40 and a beam for the=3D0D=3D0Ahigher=3D=0D=0A frequency bands=3D0D=3D0=
A=3D0D=3D0AThe squelch operation is neat...there are two m=3D=0D=0Aodes, le=
vel and=3D0D=3D0Asyllabic. With level, you can set the absolute level =3D=

=0D=0Afor squelch=3D0D=3D0Athreshold. With syllabic squelch, the radio loo=
ks for sig=3D=0D=0Anals that have=3D0D=3D0Acharacteristics of voice. In ca=
se you=3D92re wondering w=3D=0D=0Ahat good a squelch=3D0D=3D0Afeature is on=
an HF radio, I use it for scanning of=3D=0D=0A shortwave utility=3D0D=3D0A=
frequencies. Speaking of scanning, it works pretty=3D=0D=0A well too, alth=
ough=3D0D=3D0Athe scan speed could be improved. The minimum =3D93=3D=0D=0A=
dwell time=3D94 is 200 mS,=3D0D=3D0Aso the maximum scan rate is something l=
ike 5 =3D=0D=0Achannels per second. In=3D0D=3D0Aaddition to scanning the 1=
00 programmable cha=3D=0D=0Annels, you can scan a=3D0D=3D0Aprogrammable fre=
quency range.=3D0D=3D0A=3D0D=3D0AThe cho=3D=0D=0Aice of IF filters (Hz):=3D=
0D=3D0A=3D0D=3D0A6000, 3500, 2700, 2400, 2100, 1700, 1000=3D=0D=0A, 500, 20=
0, 100, DATAHI, DATAMED=3D0D=3D0A=3D0D=3D0A is OK, and the filters work we=
=3D=0D=0All. It would have been nice to have=3D0D=3D0Acontinuously variabl=
e filtering l=3D=0D=0Aike some of the external DSP boxes=3D0D=3D0Ahave. Th=
e DATA filters are 500 Hz =3D=0D=0Awide, and have center frequencies of=3D0=
D=3D0A2210 Hz (DATA HI) and 1700 Hz (DA=3D=0D=0ATA MED). Center freqs can =
be moved=3D0D=3D0Ausing IF shift.=3D0D=3D0A=3D0D=3D0AAlmost =3D=0D=0Aeveryt=
hing you could want for interfacing the radio is brought=3D0D=3D0Aout on =
=3D=0D=0Athree accessory connectors. Connectors are provided for=3D0D=3D0A=
audio/PTT/mis=3D=0D=0Ac (DB25), antenna tuner (DB9) and external amplifier=
=3D0D=3D0Acontrol (DB15). =3D=0D=0ANice that they used three different siz=
ed connectors so=3D0D=3D0Athat there=3D92s=3D=0D=0A no way to screw up by p=
lugging the wrong connector in the=3D0D=3D0Awrong jack.=3D=0D=0A=3D0D=3D0A=
=3D0D=3D0ADISLIKES:=3D0D=3D0A=3D0D=3D0AThe =3D93whisper=3D94 fan on the PA=
is notice=3D=0D=0Aably loud and is not=3D0D=3D0Athermostatically controlle=
d. Instead it runs all=3D=0D=0A the time. Fan noise=3D0D=3D0Ais a functio=
n of main supply voltage...at 12 V, =3D=0D=0Ait=3D92s pretty quiet. By=3D0=
D=3D0Athe time you run it at 13.8V, it=3D92s pretty n=3D=0D=0Aoisy.=3D0D=3D=
0A=3D0D=3D0AThere=3D92s no FM mode.=3D0D=3D0A=3D0D=3D0AThere=3D92s no low-l=
evel RF=3D=0D=0A jacks for transverter operation. =3D0D=3D0A=3D0D=3D0AThe m=
anual is light, no discu=3D=0D=0Assion of operation. However, you can get =
a=3D0D=3D0Agood theory of operation s=3D=0D=0Aection from the Kachina web p=
age and Kachina=3D0D=3D0Awill send schematics on r=3D=0D=0Aequest. There is=
currently no service manual=3D0D=3D0Aavailable. By the way, t=3D=0D=0Ahe =
folks at Kachina have been VERY responsive,=3D0D=3D0Aboth by email and by t=
e=3D=0D=0Alephone.=3D0D=3D0A=3D0D=3D0AWhy doesn=3D92t notch, IF shift, and =
noise reduction work=3D=0D=0A in AM mode? Also,=3D0D=3D0Ayou have no choic=
e of filtering in AM....6 KHz is =3D=0D=0Ait, like it or not.=3D0D=3D0A=3D0=
D=3D0AOn CW, you can select right-handed keyer, le=3D=0D=0Aft-handed keyer =
or straight=3D0D=3D0Akey modes. (Nice touch, accommodating pad=3D=0D=0Adle=
s wired any which way!)=3D0D=3D0AWhen you select straight key and use an ex=
t=3D=0D=0Aernal keyer, it appears that=3D0D=3D0Athe self-completing featur=
e of the keyer=3D=0D=0A is still active. If you have=3D0D=3D0Athe external=
keyer set to a speed that =3D=0D=0Ais FASTER than the speed set on=3D0D=3D=
0Athe internal keyer, the radio does not=3D=0D=0A follow the external keyin=
g very=3D0D=3D0Awell. The simple workaround is to se=3D=0D=0At the interna=
l keyer speed to max=3D0D=3D0A(80WPM) when using an external keyer=3D=0D=0A=
.=3D0D=3D0A=3D0D=3D0AI can=3D92t find a way to generate a continuous TUNE s=
ignal shor=3D=0D=0At of=3D0D=3D0Aplugging a good old straight key into the =
jack.=3D0D=3D0A=3D0D=3D0AAntenn=3D=0D=0Aa tuner is not very robust...not mu=

ch range of z match, and it=3D0D=3D0Awould =3D=0D=0Abe nice if it could wo=
rk outside the ham bands. To be fair, they=3D0D=3D0Aadver=3D=0D=0Atise it t=
o be used with VSWRs of 3:1 or less. Looks like it will be=3D0D=3D0Aea=3D=
=0D=0Asy to interface homebrewed autotuners.=3D0D=3D0AYou may as well skip =
the $239 f=3D=0D=0Aor the internal tuner and cobble up your=3D0D=3D0Aown. =
By the way, the interna=3D=0D=0Al tuner is currently sold as a=3D0D=3D0Ause=
r-installed option by AES. It goes =3D=0D=0Ain very easily.=3D0D=3D0A=3D0D=
=3D0AThe control software is not smart enough to dete=3D=0D=0Act minimized =
previous=3D0D=3D0Aversions. If you run more than one version of th=3D=0D=0A=
e control software, the=3D0D=3D0Aoperation becomes very unstable.=3D0D=3D0A=
=3D0D=3D0AA =3D=0D=0Arelay was used for TR switching...solid-state switchin=
g would have=3D0D=3D0Abee=3D=0D=0An nice. The relay makes QSK a bit clumsy =
and noisy, but it does seem=3D0D=3D0At=3D=0D=0Ao work pretty well (with lim=
ited testing) up to about 30 WPM.=3D0D=3D0A=3D0D=3D0AAn=3D=0D=0Ayway, that=
=3D92s my initial take on the 505DSP. So far I like it and I=3D92m=3D=0D=
=0A=3D0D=3D0Aglad I bought it. If you have any specific questions, I=3D92d=

1874. Re: FT101 AUDIO PROBLEMS

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-21 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <19971221002801.TAA22937@ladder01.news.aol.com>
Source record: 158646

I would look first at the receive contacts on the T/R relay
(transmit-to-receive relay). Perhaps cleaning will help.

K0MB

Message-ID: <19971221003201.TAA23330@ladder01.news.aol.com>
Source record: 158647

>For Sale
>Kenwood TR7850 2 meter transceiver
>mike & mounting bracket
>$175.00 US or best offer plus shipping

Why not try dropping the price $10/ week? At a recent hamfest near Denver I saw an average condition '7850 list at $150, and sell by the end of the day at $125.

User of a tr-7850

1876. Equipment Dust Covers Wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-21 00:00:00 UTC
From: mailfrmpa@aol.com
Message-ID: <19971221004101.TAA21761@ladder02.news.aol.com>
Source record: 158648

Some years ago the was a company in New England called CoverCraft, who made heavy vinyl dust covers for ham equipment. Well they don't anymore.

Does anyone know of an alternate source? Or seen any gathering dust in some electronics shop? Specifically needed are covers for TS-520, IC-730, FT-900, KWM-2, 30L-1, SB-200, HT-.....etc.

Thanks,
K0MB

From: cdurand@tri.com
Subject: Extended Receive Standard?

Here is a question? Why don't amateur radio equipment manufacturers
build all their units with extended receive standard? I know some
companies do already, but not all. I know I would like to have extended
receive on a few of my radios and could care less about extended
transmit. I myself see no reason why someone should be able to transmit
on the local cops repeater for any reason. If you have a reason the cops
will give you a radio.

Just a thought, I just finished reading a story about a kid you was
jamming the local police with his handheld and thought he might not have
done it if the option hadn't been so easily obtained.

AFrom: Ed Picha <edpi@mcs.com>=3D0D=3D0ASubject: Ka=3D=0D=0Achina 505DSP- 1=
st impressions (kinda long)=3D0D=3D0A=3D0D=3D0AHey folks...=3D0D=3D0A=3D0D=
=3D=0D=0A=3D0AThere=3D92s been a bit of interest in the Kachina 505DSP on t=
his newsgroup=3D=0D=0A,=3D0D=3D0Aso =3D0D=3D0AI thought I would share my ex=
periences with this rig after =3D=0D=0Aa few weeks=3D0D=3D0Aof playing with=
it. I won=3D92t dwell on the specs or featu=3D=0D=0Ares since they=3D0D=
=3D0Aare fairly well described on the Kachina web page,=3D0D=3D=0D=0A=3D0Ah=
ttp://www.kachina-az.com, and in the full page ads in QST.=3D0D=3D0A=3D0D=
=3D0AO=3D=0D=0Averall, the radio performs well, meets all the specs I have =
been able=3D0D=3D0A=3D=0D=0Ato test, and is a=3D0D=3D0Areal blast to play w=
ith. I have gotten used to the =3D=0D=0Atuning scheme of=3D0D=3D0Ausing a =
mouse to click UP or DOWN on the digit to be =3D=0D=0Achanged, and=3D0D=3D0=
Aalthough it=3D92s hard to get used to at first, it does gro=3D=0D=0Aw on y=
ou. I=3D0D=3D0Ahaven=3D92t experienced any problems due to noise generated=
=3D=0D=0A by the computer=3D0D=3D0Aor monitor.=3D0D=3D0A=3D0D=3D0AI=3D92ve =
controlled the radio wi=3D=0D=0Ath two W95 machines (no-name P100 and IBM=
=3D0D=3D0AThinkpad 760ED laptop) with =3D=0D=0Ano problems. Control is ver=
y real-time,=3D0D=3D0Awith no noticeable lag betwee=3D=0D=0An activating a =
control and hearing the=3D0D=3D0Aeffect in the radio. The user =3D=0D=0Ain=
terface is very intuitive, and it=3D0D=3D0Adoesn=3D92t take long at all to =
get =3D=0D=0Acomfortable using the radio. You can do=3D0D=3D0Amost operatio=
n either with the=3D=0D=0A mouse or with keyboard. If you get lost,=3D0D=
=3D0Athere=3D92s a =3D93cheat sheet=3D=0D=0A=3D94 with most of the major si=
ngle-keystroke=3D0D=3D0Acommands, and there=3D92s al=3D=0D=0Aways the pull-=
down help that goes into more=3D0D=3D0Adetail. You can download a=3D=0D=0A =
demo version of the software that will give=3D0D=3D0Ayou a good feeling for=
ho=3D=0D=0Aw it works from Kachina'a web site.=3D0D=3D0A=3D0D=3D0AI did s=
ome basic bench chec=3D=0D=0Aks, and the radio was well within specs for=3D=
0D=3D0Apower-out and receive sens=3D=0D=0Aitivity. I plan to do more detai=
led tests=3D0D=3D0A(particularly on receiver p=3D=0D=0Aerformance) when I c=
an get the equipment=3D0D=3D0Atogether at work.=3D0D=3D0A=3D0D=3D0A=3D=0D=
=0AI did my own little PA torture tests by running the radio for 24 hours,=
=3D0D=3D=0D=0A=3D0ACW full power out into a dummy load, keyed by a memory k=
eyer in beacon=3D=0D=0A=3D0D=3D0Amode. I also tested continuous duty PA pe=
rformance by keying in CW m=3D=0D=0Aode=3D0D=3D0Acontinuously for 30 minute=
s. In both tests, there was no power ou=3D=0D=0Atput=3D0D=3D0Aslump, and t=
he PA temperature stayed under +50 C.=3D0D=3D0A=3D0D=3D0ALIKE=3D=0D=0AS:=3D=

0D=3D0ADSP-based noise reduction can be very effective! Likewise the auto=
=3D=0D=0Amatic=3D0D=3D0Anotch.=3D0D=3D0A=3D0D=3D0AAbility to tailor transmi=
t audio response is a=3D=0D=0A nice feature. I=3D92ve=3D0D=3D0Agotten many=
unsolicited positive comments on th=3D=0D=0Ae general audio quality,=3D0D=
=3D0Aboth with the speech processor and without.=3D=0D=0A=3D0D=3D0A=3D0D=3D=
0ASpectrum analyzer is useful, and it=3D92s slick to be able to cli=3D=0D=
=0Ack on a=3D0D=3D0Asignal you see in the analyzer window and have the radi=
o autom=3D=0D=0Aagically=3D0D=3D0Atuned to that frequency.=3D0D=3D0A=3D0D=
=3D0AI like the idea of a cali=3D=0D=0Abrated S-meter that is accurate on a=
ll bands. =3D0D=3D0A(I checked...it=3D92s wel=3D=0D=0Al within the claimed =
+/- 5 dB accuracy). It=3D92s also=3D0D=3D0Anice to be able =3D=0D=0Ato con=
figure the S-meter to read in dBm, uV, or S units.=3D0D=3D0A=3D0D=3D0AThere=
a=3D=0D=0Are two antenna ports that you can assign by band, or use one for=
=3D0D=3D0Atrans=3D=0D=0Amit and one for receive. This setup accommodates t=
he typical=3D0D=3D0Ainstalla=3D=0D=0Ation where you have a wire antenna for=
80/40 and a beam for the=3D0D=3D0Ahigher=3D=0D=0A frequency bands=3D0D=3D0=
A=3D0D=3D0AThe squelch operation is neat...there are two m=3D=0D=0Aodes, le=
vel and=3D0D=3D0Asyllabic. With level, you can set the absolute level =3D=
=0D=0Afor squelch=3D0D=3D0Athreshold. With syllabic squelch, the radio loo=
ks for sig=3D=0D=0Anals that have=3D0D=3D0Acharacteristics of voice. In ca=
se you=3D92re wondering w=3D=0D=0Ahat good a squelch=3D0D=3D0Afeature is on=
an HF radio, I use it for scanning of=3D=0D=0A shortwave utility=3D0D=3D0A=
frequencies. Speaking of scanning, it works pretty=3D=0D=0A well too, alth=
ough=3D0D=3D0Athe scan speed could be improved. The minimum =3D93=3D=0D=0A=
dwell time=3D94 is 200 mS,=3D0D=3D0Aso the maximum scan rate is something l=
ike 5 =3D=0D=0Achannels per second. In=3D0D=3D0Aaddition to scanning the 1=
00 programmable cha=3D=0D=0Annels, you can scan a=3D0D=3D0Aprogrammable fre=
quency range.=3D0D=3D0A=3D0D=3D0AThe cho=3D=0D=0Aice of IF filters (Hz):=3D=
0D=3D0A=3D0D=3D0A6000, 3500, 2700, 2400, 2100, 1700, 1000=3D=0D=0A, 500, 20=
0, 100, DATAHI, DATAMED=3D0D=3D0A=3D0D=3D0A is OK, and the filters work we=
=3D=0D=0All. It would have been nice to have=3D0D=3D0Acontinuously variabl=
e filtering l=3D=0D=0Aike some of the external DSP boxes=3D0D=3D0Ahave. Th=
e DATA filters are 500 Hz =3D=0D=0Awide, and have center frequencies of=3D0=
D=3D0A2210 Hz (DATA HI) and 1700 Hz (DA=3D=0D=0ATA MED). Center freqs can =
be moved=3D0D=3D0Ausing IF shift.=3D0D=3D0A=3D0D=3D0AAlmost =3D=0D=0Aeveryt=
hing you could want for interfacing the radio is brought=3D0D=3D0Aout on =
=3D=0D=0Athree accessory connectors. Connectors are provided for=3D0D=3D0A=
audio/PTT/mis=3D=0D=0Ac (DB25), antenna tuner (DB9) and external amplifier=
=3D0D=3D0Acontrol (DB15). =3D=0D=0ANice that they used three different siz=
ed connectors so=3D0D=3D0Athat there=3D92s=3D=0D=0A no way to screw up by p=
lugging the wrong connector in the=3D0D=3D0Awrong jack.=3D=0D=0A=3D0D=3D0A=
=3D0D=3D0ADISLIKES:=3D0D=3D0A=3D0D=3D0AThe =3D93whisper=3D94 fan on the PA=
is notice=3D=0D=0Aably loud and is not=3D0D=3D0Athermostatically controlle=
d. Instead it runs all=3D=0D=0A the time. Fan noise=3D0D=3D0Ais a functio=
n of main supply voltage...at 12 V, =3D=0D=0Ait=3D92s pretty quiet. By=3D0=
D=3D0Athe time you run it at 13.8V, it=3D92s pretty n=3D=0D=0Aoisy.=3D0D=3D=
0A=3D0D=3D0AThere=3D92s no FM mode.=3D0D=3D0A=3D0D=3D0AThere=3D92s no low-l=
evel RF=3D=0D=0A jacks for transverter operation. =3D0D=3D0A=3D0D=3D0AThe m=
anual is light, no discu=3D=0D=0Assion of operation. However, you can get =
a=3D0D=3D0Agood theory of operation s=3D=0D=0Aection from the Kachina web p=

age and Kachina=3D0D=3D0Awill send schematics on r=3D=0D=0Aequest. There is=
currently no service manual=3D0D=3D0Aavailable. By the way, t=3D=0D=0Ahe =
folks at Kachina have been VERY responsive,=3D0D=3D0Aboth by email and by t=
e=3D=0D=0Alephone.=3D0D=3D0A=3D0D=3D0AWhy doesn=3D92t notch, IF shift, and =
noise reduction work=3D=0D=0A in AM mode? Also,=3D0D=3D0Ayou have no choic=
e of filtering in AM....6 KHz is =3D=0D=0Ait, like it or not.=3D0D=3D0A=3D0=
D=3D0AOn CW, you can select right-handed keyer, le=3D=0D=0Aft-handed keyer =
or straight=3D0D=3D0Akey modes. (Nice touch, accommodating pad=3D=0D=0Adle=
s wired any which way!)=3D0D=3D0AWhen you select straight key and use an ex=
t=3D=0D=0Aernal keyer, it appears that=3D0D=3D0Athe self-completing featur=
e of the keyer=3D=0D=0A is still active. If you have=3D0D=3D0Athe external=
keyer set to a speed that =3D=0D=0Ais FASTER than the speed set on=3D0D=3D=
0Athe internal keyer, the radio does not=3D=0D=0A follow the external keyin=
g very=3D0D=3D0Awell. The simple workaround is to se=3D=0D=0At the interna=
l keyer speed to max=3D0D=3D0A(80WPM) when using an external keyer=3D=0D=0A=
.=3D0D=3D0A=3D0D=3D0AI can=3D92t find a way to generate a continuous TUNE s=
ignal shor=3D=0D=0At of=3D0D=3D0Aplugging a good old straight key into the =
jack.=3D0D=3D0A=3D0D=3D0AAntenn=3D=0D=0Aa tuner is not very robust...not mu=
ch range of z match, and it=3D0D=3D0Awould =3D=0D=0Abe nice if it could wo=
rk outside the ham bands. To be fair, they=3D0D=3D0Aadver=3D=0D=0Atise it t=
o be used with VSWRs of 3:1 or less. Looks like it will be=3D0D=3D0Aea=3D=
=0D=0Asy to interface homebrewed autotuners.=3D0D=3D0AYou may as well skip =
the $239 f=3D=0D=0Aor the internal tuner and cobble up your=3D0D=3D0Aown. =
By the way, the interna=3D=0D=0Al tuner is currently sold as a=3D0D=3D0Ause=
r-installed option by AES. It goes =3D=0D=0Ain very easily.=3D0D=3D0A=3D0D=
=3D0AThe control software is not smart enough to dete=3D=0D=0Act minimized =
previous=3D0D=3D0Aversions. If you run more than one version of th=3D=0D=0A=
e control software, the=3D0D=3D0Aoperation becomes very unstable.=3D0D=3D0A=
=3D0D=3D0AA =3D=0D=0Arelay was used for TR switching...solid-state switchin=
g would have=3D0D=3D0Abee=3D=0D=0An nice. The relay makes QSK a bit clumsy =
and noisy, but it does seem=3D0D=3D0At=3D=0D=0Ao work pretty well (with lim=
ited testing) up to about 30 WPM.=3D0D=3D0A=3D0D=3D0AAn=3D=0D=0Ayway, that=
=3D92s my initial take on the 505DSP. So far I like it and I=3D92m=3D=0D=
=0A=3D0D=3D0Aglad I bought it. If you have any specific questions, I=3D92d=
be glad =3D=0D=0Ato=3D0D=3D0Atry and answer them.=3D0D=3D0A73...=3D0D=3D0A=

Subject: Equipment Dust Covers Wanted

Some years ago the was a company in New England called CoverCraft, who made heavy vinyl dust covers for ham equipment. Well they don't anymore.

Does anyone know of an alternate source? Or seen any gathering dust in some electronics shop? Specifically needed are covers for TS-520, IC-730, FT-900, KWM-2, 30L-1, SB-200, HT-.....etc.

Thanks,
K0MB

Subject: For Sale: Kenwood TR7850

>For Sale
>Kenwood TR7850 2 meter transceiver
>mike & mounting bracket
>$175.00 US or best offer plus shipping

Why not try dropping the price $10/ week? At a recent hamfest near Denver I saw an average condition '7850 list at $150, and sell by the end of the day at $125.

Subject: FT101 AUDIO PROBLEMS

I would look first at the receive contacts on the T/R relay (transmit-to-receive relay). Perhaps cleaning will help.

From: "Mike Pender" <steam@megsinet.net>
Subject: TS-430S meter light

Use your meter to see if it's a 12 volt or 120 volt panel lamp,
then save yourself some time and money and go to radio
shack and get a small panel lamp. That's what I did for my
ts-700a.

73... Mike

From: Austin Powers <Powers@ix.netcom.com>
Subject: TS570S vs IC756 vs FT920

I stand corrected. The CTCSS is included with the FT-920 plus Digital Voice
Keyer.
These are usually EXTRAS for other brands so I guess it all evens out.
STILL....Charging
for FM is "cheesy". The AM filter is first rate but I suggest you buy it from
INRAD instead of Yaesu.
The scope on the IC-756 is too slow and as QST say"like choppy seas".

Austin Powers

Subject: FS Kenwood PS430 20 amp P.S. Mint condx

I bought it new and it is a great supply. Perfect condition and looks
great next to Kenwood rigs! $145

From: k1lpi@aol.com (K1LPI)
Subject: FS or SWAP: MA-550 Crank up mast 55 feet

For Sale or SWAP
US TOWERS MA-550 Telescoping 55 foot three section crank up tubular tower. For
specs surf over to
http://www.ustower.com/tubular.html

Tower is on the ground and can be picked up near San Jose, CA. Sorry, can't
ship. Weighs 400 lbs so bring some strong friends and a truck to get it. Needs
a base which is available from US Towers.

Sell for Best Offer or trade for HF Linear.

73
Dave,
K1LPI

From: cdurand@tri.com
Subject: Extended Receive Standard?

Here is a question? Why don't amateur radio equipment manufacturers
build all their units with extended receive standard? I know some
companies do already, but not all. I know I would like to have extended
receive on a few of my radios and could care less about extended
transmit. I myself see no reason why someone should be able to transmit
on the local cops repeater for any reason. If you have a reason the cops
will give you a radio.

Just a thought, I just finished reading a story about a kid you was
jamming the local police with his handheld and thought he might not have
done it if the option hadn't been so easily obtained.

=3D0D=3D0A=3D0D=3D0ADate: Sat, 20 =3D=0D=0ADec 1997 09:00:45 -0600=3D0D=3D0=
AFrom: Ed Picha <edpi@mcs.com>=3D0D=3D0ASubject: Ka=3D=0D=0Achina 505DSP- 1=
st impressions (kinda long)=3D0D=3D0A=3D0D=3D0AHey folks...=3D0D=3D0A=3D0D=
=3D=0D=0A=3D0AThere=3D92s been a bit of interest in the Kachina 505DSP on t=
his newsgroup=3D=0D=0A,=3D0D=3D0Aso =3D0D=3D0AI thought I would share my ex=
periences with this rig after =3D=0D=0Aa few weeks=3D0D=3D0Aof playing with=
it. I won=3D92t dwell on the specs or featu=3D=0D=0Ares since they=3D0D=
=3D0Aare fairly well described on the Kachina web page,=3D0D=3D=0D=0A=3D0Ah=
ttp://www.kachina-az.com, and in the full page ads in QST.=3D0D=3D0A=3D0D=
=3D0AO=3D=0D=0Averall, the radio performs well, meets all the specs I have =
been able=3D0D=3D0A=3D=0D=0Ato test, and is a=3D0D=3D0Areal blast to play w=
ith. I have gotten used to the =3D=0D=0Atuning scheme of=3D0D=3D0Ausing a =
mouse to click UP or DOWN on the digit to be =3D=0D=0Achanged, and=3D0D=3D0=
Aalthough it=3D92s hard to get used to at first, it does gro=3D=0D=0Aw on y=
ou. I=3D0D=3D0Ahaven=3D92t experienced any problems due to noise generated=
=3D=0D=0A by the computer=3D0D=3D0Aor monitor.=3D0D=3D0A=3D0D=3D0AI=3D92ve =
controlled the radio wi=3D=0D=0Ath two W95 machines (no-name P100 and IBM=
=3D0D=3D0AThinkpad 760ED laptop) with =3D=0D=0Ano problems. Control is ver=

y real-time,=3D0D=3D0Awith no noticeable lag betwee=3D=0D=0An activating a =
control and hearing the=3D0D=3D0Aeffect in the radio. The user =3D=0D=0Ain=
terface is very intuitive, and it=3D0D=3D0Adoesn=3D92t take long at all to =
get =3D=0D=0Acomfortable using the radio. You can do=3D0D=3D0Amost operatio=
n either with the=3D=0D=0A mouse or with keyboard. If you get lost,=3D0D=
=3D0Athere=3D92s a =3D93cheat sheet=3D=0D=0A=3D94 with most of the major si=
ngle-keystroke=3D0D=3D0Acommands, and there=3D92s al=3D=0D=0Aways the pull-=
down help that goes into more=3D0D=3D0Adetail. You can download a=3D=0D=0A =
demo version of the software that will give=3D0D=3D0Ayou a good feeling for=
ho=3D=0D=0Aw it works from Kachina'a web site.=3D0D=3D0A=3D0D=3D0AI did s=
ome basic bench chec=3D=0D=0Aks, and the radio was well within specs for=3D=
0D=3D0Apower-out and receive sens=3D=0D=0Aitivity. I plan to do more detai=
led tests=3D0D=3D0A(particularly on receiver p=3D=0D=0Aerformance) when I c=
an get the equipment=3D0D=3D0Atogether at work.=3D0D=3D0A=3D0D=3D0A=3D=0D=
=0AI did my own little PA torture tests by running the radio for 24 hours,=
=3D0D=3D=0D=0A=3D0ACW full power out into a dummy load, keyed by a memory k=
eyer in beacon=3D=0D=0A=3D0D=3D0Amode. I also tested continuous duty PA pe=
rformance by keying in CW m=3D=0D=0Aode=3D0D=3D0Acontinuously for 30 minute=
s. In both tests, there was no power ou=3D=0D=0Atput=3D0D=3D0Aslump, and t=
he PA temperature stayed under +50 C.=3D0D=3D0A=3D0D=3D0ALIKE=3D=0D=0AS:=3D=
0D=3D0ADSP-based noise reduction can be very effective! Likewise the auto=
=3D=0D=0Amatic=3D0D=3D0Anotch.=3D0D=3D0A=3D0D=3D0AAbility to tailor transmi=
t audio response is a=3D=0D=0A nice feature. I=3D92ve=3D0D=3D0Agotten many=
unsolicited positive comments on th=3D=0D=0Ae general audio quality,=3D0D=
=3D0Aboth with the speech processor and without.=3D=0D=0A=3D0D=3D0A=3D0D=3D=
0ASpectrum analyzer is useful, and it=3D92s slick to be able to cli=3D=0D=
=0Ack on a=3D0D=3D0Asignal you see in the analyzer window and have the radi=
o autom=3D=0D=0Aagically=3D0D=3D0Atuned to that frequency.=3D0D=3D0A=3D0D=
=3D0AI like the idea of a cali=3D=0D=0Abrated S-meter that is accurate on a=
ll bands. =3D0D=3D0A(I checked...it=3D92s wel=3D=0D=0Al within the claimed =
+/- 5 dB accuracy). It=3D92s also=3D0D=3D0Anice to be able =3D=0D=0Ato con=
figure the S-meter to read in dBm, uV, or S units.=3D0D=3D0A=3D0D=3D0AThere=
a=3D=0D=0Are two antenna ports that you can assign by band, or use one for=
=3D0D=3D0Atrans=3D=0D=0Amit and one for receive. This setup accommodates t=
he typical=3D0D=3D0Ainstalla=3D=0D=0Ation where you have a wire antenna for=
80/40 and a beam for the=3D0D=3D0Ahigher=3D=0D=0A frequency bands=3D0D=3D0=
A=3D0D=3D0AThe squelch operation is neat...there are two m=3D=0D=0Aodes, le=
vel and=3D0D=3D0Asyllabic. With level, you can set the absolute level =3D=
=0D=0Afor squelch=3D0D=3D0Athreshold. With syllabic squelch, the radio loo=
ks for sig=3D=0D=0Anals that have=3D0D=3D0Acharacteristics of voice. In ca=
se you=3D92re wondering w=3D=0D=0Ahat good a squelch=3D0D=3D0Afeature is on=
an HF radio, I use it for scanning of=3D=0D=0A shortwave utility=3D0D=3D0A=
frequencies. Speaking of scanning, it works pretty=3D=0D=0A well too, alth=
ough=3D0D=3D0Athe scan speed could be improved. The minimum =3D93=3D=0D=0A=
dwell time=3D94 is 200 mS,=3D0D=3D0Aso the maximum scan rate is something l=
ike 5 =3D=0D=0Achannels per second. In=3D0D=3D0Aaddition to scanning the 1=
00 programmable cha=3D=0D=0Annels, you can scan a=3D0D=3D0Aprogrammable fre=
quency range.=3D0D=3D0A=3D0D=3D0AThe cho=3D=0D=0Aice of IF filters (Hz):=3D=
0D=3D0A=3D0D=3D0A6000, 3500, 2700, 2400, 2100, 1700, 1000=3D=0D=0A, 500, 20=
0, 100, DATAHI, DATAMED=3D0D=3D0A=3D0D=3D0A is OK, and the filters work we=

=3D=0D=0All. It would have been nice to have=3D0D=3D0Acontinuously variabl=
e filtering l=3D=0D=0Aike some of the external DSP boxes=3D0D=3D0Ahave. Th=
e DATA filters are 500 Hz =3D=0D=0Awide, and have center frequencies of=3D0=
D=3D0A2210 Hz (DATA HI) and 1700 Hz (DA=3D=0D=0ATA MED). Center freqs can =
be moved=3D0D=3D0Ausing IF shift.=3D0D=3D0A=3D0D=3D0AAlmost =3D=0D=0Aeveryt=
hing you could want for interfacing the radio is brought=3D0D=3D0Aout on =
=3D=0D=0Athree accessory connectors. Connectors are provided for=3D0D=3D0A=
audio/PTT/mis=3D=0D=0Ac (DB25), antenna tuner (DB9) and external amplifier=
=3D0D=3D0Acontrol (DB15). =3D=0D=0ANice that they used three different siz=
ed connectors so=3D0D=3D0Athat there=3D92s=3D=0D=0A no way to screw up by p=
lugging the wrong connector in the=3D0D=3D0Awrong jack.=3D=0D=0A=3D0D=3D0A=
=3D0D=3D0ADISLIKES:=3D0D=3D0A=3D0D=3D0AThe =3D93whisper=3D94 fan on the PA=
is notice=3D=0D=0Aably loud and is not=3D0D=3D0Athermostatically controlle=
d. Instead it runs all=3D=0D=0A the time. Fan noise=3D0D=3D0Ais a functio=
n of main supply voltage...at 12 V, =3D=0D=0Ait=3D92s pretty quiet. By=3D0=
D=3D0Athe time you run it at 13.8V, it=3D92s pretty n=3D=0D=0Aoisy.=3D0D=3D=
0A=3D0D=3D0AThere=3D92s no FM mode.=3D0D=3D0A=3D0D=3D0AThere=3D92s no low-l=
evel RF=3D=0D=0A jacks for transverter operation. =3D0D=3D0A=3D0D=3D0AThe m=
anual is light, no discu=3D=0D=0Assion of operation. However, you can get =
a=3D0D=3D0Agood theory of operation s=3D=0D=0Aection from the Kachina web p=
age and Kachina=3D0D=3D0Awill send schematics on r=3D=0D=0Aequest. There is=
currently no service manual=3D0D=3D0Aavailable. By the way, t=3D=0D=0Ahe =
folks at Kachina have been VERY responsive,=3D0D=3D0Aboth by email and by t=
e=3D=0D=0Alephone.=3D0D=3D0A=3D0D=3D0AWhy doesn=3D92t notch, IF shift, and =
noise reduction work=3D=0D=0A in AM mode? Also,=3D0D=3D0Ayou have no choic=
e of filtering in AM....6 KHz is =3D=0D=0Ait, like it or not.=3D0D=3D0A=3D0=
D=3D0AOn CW, you can select right-handed keyer, le=3D=0D=0Aft-handed keyer =
or straight=3D0D=3D0Akey modes. (Nice touch, accommodating pad=3D=0D=0Adle=
s wired any which way!)=3D0D=3D0AWhen you select straight key and use an ex=
t=3D=0D=0Aernal keyer, it appears that=3D0D=3D0Athe self-completing featur=
e of the keyer=3D=0D=0A is still active. If you have=3D0D=3D0Athe external=
keyer set to a speed that =3D=0D=0Ais FASTER than the speed set on=3D0D=3D=
0Athe internal keyer, the radio does not=3D=0D=0A follow the external keyin=
g very=3D0D=3D0Awell. The simple workaround is to se=3D=0D=0At the interna=
l keyer speed to max=3D0D=3D0A(80WPM) when using an external keyer=3D=0D=0A=
.=3D0D=3D0A=3D0D=3D0AI can=3D92t find a way to generate a continuous TUNE s=
ignal shor=3D=0D=0At of=3D0D=3D0Aplugging a good old straight key into the =
jack.=3D0D=3D0A=3D0D=3D0AAntenn=3D=0D=0Aa tuner is not very robust...not mu=
ch range of z match, and it=3D0D=3D0Awould =3D=0D=0Abe nice if it could wo=
rk outside the ham bands. To be fair, they=3D0D=3D0Aadver=3D=0D=0Atise it t=
o be used with VSWRs of 3:1 or less. Looks like it will be=3D0D=3D0Aea=3D=
=0D=0Asy to interface homebrewed autotuners.=3D0D=3D0AYou may as well skip =
the $239 f=3D=0D=0Aor the internal tuner and cobble up your=3D0D=3D0Aown. =
By the way, the interna=3D=0D=0Al tuner is currently sold as a=3D0D=3D0Ause=
r-installed option by AES. It goes =3D=0D=0Ain very easily.=3D0D=3D0A=3D0D=
=3D0AThe control software is not smart enough to dete=3D=0D=0Act minimized =
previous=3D0D=3D0Aversions. If you run more than one version of th=3D=0D=0A=
e control software, the=3D0D=3D0Aoperation becomes very unstable.=3D0D=3D0A=
=3D0D=3D0AA =3D=0D=0Arelay was used for TR switching...solid-state switchin=

This radio is brand new! Still in box. Also has been tweaked and peaked in every way!!! (For those of you who dont know what that means, it means it has been completely every MOD!) Comes with a edge cover.

5 w/ 2w on low.
comes with two batteries (1 five watt battery, 1 two watt back up battery)
112 memory channels
DCS & CTCSS encoder
Alpha numeric display
PC programable
so, so, so, so, so, so much MORE FEATURES!!!!!!!!!!!! Please E-Mail me at:
Slash523@earthlink.net or
Slash502@aol.com

respnd ASAP please.

From: mailfrmpa@aol.com (MailfrmPA)
Subject: Equipment Dust Covers Wanted

Some years ago the was a company in New England called CoverCraft, who made
heavy vinyl dust covers for ham equipment. Well they don't anymore.

Does anyone know of an alternate source? Or seen any gathering dust in some
electronics shop? Specifically needed are covers for TS-520, IC-730, FT-900,
KWM-2, 30L-1, SB-200, HT-.......etc.

Thanks,
K0MB

Subject: For Sale: Kenwood TR7850

>For Sale
>Kenwood TR7850 2 meter transceiver
>mike & mounting bracket
>$175.00 US or best offer plus shipping

Why not try dropping the price $10/ week? At a recent hamfest near Denver I saw an average condition '7850 list at $150, and sell by the end of the day at $125.

Subject: FT101 AUDIO PROBLEMS

I would look first at the receive contacts on the T/R relay (transmit-to-receive relay). Perhaps cleaning will help.

Subject: TS-430S meter light

Use your meter to see if it's a 12 volt or 120 volt panel lamp,
then save yourself some time and money and go to radio
shack and get a small panel lamp. That's what I did for my
ts-700a.

73... Mike

From: Austin Powers <Powers@ix.netcom.com>
Subject: TS570S vs IC756 vs FT920

I stand corrected. The CTCSS is included with the FT-920 plus Digital Voice
Keyer.
These are usually EXTRAS for other brands so I guess it all evens out.
STILL....Charging
for FM is "cheesy". The AM filter is first rate but I suggest you buy it from
INRAD instead of Yaesu.
The scope on the IC-756 is too slow and as QST say"like choppy seas".

Austin Powers

From: cdurand@tri.com
Subject: Extended Receive Standard?

Here is a question? Why don't amateur radio equipment manufacturers
build all their units with extended receive standard? I know some
companies do already, but not all. I know I would like to have extended
receive on a few of my radios and could care less about extended
transmit. I myself see no reason why someone should be able to transmit
on the local cops repeater for any reason. If you have a reason the cops
will give you a radio.

Just a thought, I just finished reading a story about a kid you was
jamming the local police with his handheld and thought he might not have
done it if the option hadn't been so easily obtained.

AFrom: Ed Picha <edpi@mcs.com>=3D0D=3D0ASubject: Ka=3D=0D=0Achina 505DSP- 1=
st impressions (kinda long)=3D0D=3D0A=3D0D=3D0AHey folks...=3D0D=3D0A=3D0D=
=3D=0D=0A=3D0AThere=3D92s been a bit of interest in the Kachina 505DSP on t=
his newsgroup=3D=0D=0A,=3D0D=3D0Aso =3D0D=3D0AI thought I would share my ex=
periences with this rig after =3D=0D=0Aa few weeks=3D0D=3D0Aof playing with=
it. I won=3D92t dwell on the specs or featu=3D=0D=0Ares since they=3D0D=
=3D0Aare fairly well described on the Kachina web page,=3D0D=3D=0D=0A=3D0Ah=
ttp://www.kachina-az.com, and in the full page ads in QST.=3D0D=3D0A=3D0D=
=3D0AO=3D=0D=0Averall, the radio performs well, meets all the specs I have =
been able=3D0D=3D0A=3D=0D=0Ato test, and is a=3D0D=3D0Areal blast to play w=
ith. I have gotten used to the =3D=0D=0Atuning scheme of=3D0D=3D0Ausing a =
mouse to click UP or DOWN on the digit to be =3D=0D=0Achanged, and=3D0D=3D0=
Aalthough it=3D92s hard to get used to at first, it does gro=3D=0D=0Aw on y=
ou. I=3D0D=3D0Ahaven=3D92t experienced any problems due to noise generated=
=3D=0D=0A by the computer=3D0D=3D0Aor monitor.=3D0D=3D0A=3D0D=3D0AI=3D92ve =
controlled the radio wi=3D=0D=0Ath two W95 machines (no-name P100 and IBM=
=3D0D=3D0AThinkpad 760ED laptop) with =3D=0D=0Ano problems. Control is ver=
y real-time,=3D0D=3D0Awith no noticeable lag betwee=3D=0D=0An activating a =
control and hearing the=3D0D=3D0Aeffect in the radio. The user =3D=0D=0Ain=
terface is very intuitive, and it=3D0D=3D0Adoesn=3D92t take long at all to =
get =3D=0D=0Acomfortable using the radio. You can do=3D0D=3D0Amost operatio=
n either with the=3D=0D=0A mouse or with keyboard. If you get lost,=3D0D=
=3D0Athere=3D92s a =3D93cheat sheet=3D=0D=0A=3D94 with most of the major si=
ngle-keystroke=3D0D=3D0Acommands, and there=3D92s al=3D=0D=0Aways the pull-=
down help that goes into more=3D0D=3D0Adetail. You can download a=3D=0D=0A =
demo version of the software that will give=3D0D=3D0Ayou a good feeling for=
ho=3D=0D=0Aw it works from Kachina'a web site.=3D0D=3D0A=3D0D=3D0AI did s=
ome basic bench chec=3D=0D=0Aks, and the radio was well within specs for=3D=

0D=3D0Apower-out and receive sens=3D=0D=0Aitivity. I plan to do more detai=
led tests=3D0D=3D0A(particularly on receiver p=3D=0D=0Aerformance) when I c=
an get the equipment=3D0D=3D0Atogether at work.=3D0D=3D0A=3D0D=3D0A=3D=0D=
=0AI did my own little PA torture tests by running the radio for 24 hours,=
=3D0D=3D=0D=0A=3D0ACW full power out into a dummy load, keyed by a memory k=
eyer in beacon=3D=0D=0A=3D0D=3D0Amode. I also tested continuous duty PA pe=
rformance by keying in CW m=3D=0D=0Aode=3D0D=3D0Acontinuously for 30 minute=
s. In both tests, there was no power ou=3D=0D=0Atput=3D0D=3D0Aslump, and t=
he PA temperature stayed under +50 C.=3D0D=3D0A=3D0D=3D0ALIKE=3D=0D=0AS:=3D=
0D=3D0ADSP-based noise reduction can be very effective! Likewise the auto=
=3D=0D=0Amatic=3D0D=3D0Anotch.=3D0D=3D0A=3D0D=3D0AAbility to tailor transmi=
t audio response is a=3D=0D=0A nice feature. I=3D92ve=3D0D=3D0Agotten many=
unsolicited positive comments on th=3D=0D=0Ae general audio quality,=3D0D=
=3D0Aboth with the speech processor and without.=3D=0D=0A=3D0D=3D0A=3D0D=3D=
0ASpectrum analyzer is useful, and it=3D92s slick to be able to cli=3D=0D=
=0Ack on a=3D0D=3D0Asignal you see in the analyzer window and have the radi=
o autom=3D=0D=0Aagically=3D0D=3D0Atuned to that frequency.=3D0D=3D0A=3D0D=
=3D0AI like the idea of a cali=3D=0D=0Abrated S-meter that is accurate on a=
ll bands. =3D0D=3D0A(I checked...it=3D92s wel=3D=0D=0Al within the claimed =
+/- 5 dB accuracy). It=3D92s also=3D0D=3D0Anice to be able =3D=0D=0Ato con=
figure the S-meter to read in dBm, uV, or S units.=3D0D=3D0A=3D0D=3D0AThere=
a=3D=0D=0Are two antenna ports that you can assign by band, or use one for=
=3D0D=3D0Atrans=3D=0D=0Amit and one for receive. This setup accommodates t=
he typical=3D0D=3D0Ainstalla=3D=0D=0Ation where you have a wire antenna for=
80/40 and a beam for the=3D0D=3D0Ahigher=3D=0D=0A frequency bands=3D0D=3D0=
A=3D0D=3D0AThe squelch operation is neat...there are two m=3D=0D=0Aodes, le=
vel and=3D0D=3D0Asyllabic. With level, you can set the absolute level =3D=
=0D=0Afor squelch=3D0D=3D0Athreshold. With syllabic squelch, the radio loo=
ks for sig=3D=0D=0Anals that have=3D0D=3D0Acharacteristics of voice. In ca=
se you=3D92re wondering w=3D=0D=0Ahat good a squelch=3D0D=3D0Afeature is on=
an HF radio, I use it for scanning of=3D=0D=0A shortwave utility=3D0D=3D0A=
frequencies. Speaking of scanning, it works pretty=3D=0D=0A well too, alth=
ough=3D0D=3D0Athe scan speed could be improved. The minimum =3D93=3D=0D=0A=
dwell time=3D94 is 200 mS,=3D0D=3D0Aso the maximum scan rate is something l=
ike 5 =3D=0D=0Achannels per second. In=3D0D=3D0Aaddition to scanning the 1=
00 programmable cha=3D=0D=0Annels, you can scan a=3D0D=3D0Aprogrammable fre=
quency range.=3D0D=3D0A=3D0D=3D0AThe cho=3D=0D=0Aice of IF filters (Hz):=3D=
0D=3D0A=3D0D=3D0A6000, 3500, 2700, 2400, 2100, 1700, 1000=3D=0D=0A, 500, 20=
0, 100, DATAHI, DATAMED=3D0D=3D0A=3D0D=3D0A is OK, and the filters work we=
=3D=0D=0All. It would have been nice to have=3D0D=3D0Acontinuously variabl=
e filtering l=3D=0D=0Aike some of the external DSP boxes=3D0D=3D0Ahave. Th=
e DATA filters are 500 Hz =3D=0D=0Awide, and have center frequencies of=3D0=
D=3D0A2210 Hz (DATA HI) and 1700 Hz (DA=3D=0D=0ATA MED). Center freqs can =
be moved=3D0D=3D0Ausing IF shift.=3D0D=3D0A=3D0D=3D0AAlmost =3D=0D=0Aeveryt=
hing you could want for interfacing the radio is brought=3D0D=3D0Aout on =
=3D=0D=0Athree accessory connectors. Connectors are provided for=3D0D=3D0A=
audio/PTT/mis=3D=0D=0Ac (DB25), antenna tuner (DB9) and external amplifier=
=3D0D=3D0Acontrol (DB15). =3D=0D=0ANice that they used three different siz=
ed connectors so=3D0D=3D0Athat there=3D92s=3D=0D=0A no way to screw up by p=
lugging the wrong connector in the=3D0D=3D0Awrong jack.=3D=0D=0A=3D0D=3D0A=

=3D0D=3D0ADISLIKES:=3D0D=3D0A=3D0D=3D0AThe =3D93whisper=3D94 fan on the PA=
is notice=3D=0D=0Aably loud and is not=3D0D=3D0Athermostatically controlle=
d. Instead it runs all=3D=0D=0A the time. Fan noise=3D0D=3D0Ais a functio=
n of main supply voltage...at 12 V, =3D=0D=0Ait=3D92s pretty quiet. By=3D0=
D=3D0Athe time you run it at 13.8V, it=3D92s pretty n=3D=0D=0Aoisy.=3D0D=3D=
0A=3D0D=3D0AThere=3D92s no FM mode.=3D0D=3D0A=3D0D=3D0AThere=3D92s no low-l=
evel RF=3D=0D=0A jacks for transverter operation. =3D0D=3D0A=3D0D=3D0AThe m=
anual is light, no discu=3D=0D=0Assion of operation. However, you can get =
a=3D0D=3D0Agood theory of operation s=3D=0D=0Aection from the Kachina web p=
age and Kachina=3D0D=3D0Awill send schematics on r=3D=0D=0Aequest. There is=
currently no service manual=3D0D=3D0Aavailable. By the way, t=3D=0D=0Ahe =
folks at Kachina have been VERY responsive,=3D0D=3D0Aboth by email and by t=
e=3D=0D=0Alephone.=3D0D=3D0A=3D0D=3D0AWhy doesn=3D92t notch, IF shift, and =
noise reduction work=3D=0D=0A in AM mode? Also,=3D0D=3D0Ayou have no choic=
e of filtering in AM....6 KHz is =3D=0D=0Ait, like it or not.=3D0D=3D0A=3D0=
D=3D0AOn CW, you can select right-handed keyer, le=3D=0D=0Aft-handed keyer =
or straight=3D0D=3D0Akey modes. (Nice touch, accommodating pad=3D=0D=0Adle=
s wired any which way!)=3D0D=3D0AWhen you select straight key and use an ex=
t=3D=0D=0Aernal keyer, it appears that=3D0D=3D0Athe self-completing featur=
e of the keyer=3D=0D=0A is still active. If you have=3D0D=3D0Athe external=
keyer set to a speed that =3D=0D=0Ais FASTER than the speed set on=3D0D=3D=
0Athe internal keyer, the radio does not=3D=0D=0A follow the external keyin=
g very=3D0D=3D0Awell. The simple workaround is to se=3D=0D=0At the interna=
l keyer speed to max=3D0D=3D0A(80WPM) when using an external keyer=3D=0D=0A=
.=3D0D=3D0A=3D0D=3D0AI can=3D92t find a way to generate a continuous TUNE s=
ignal shor=3D=0D=0At of=3D0D=3D0Aplugging a good old straight key into the =
jack.=3D0D=3D0A=3D0D=3D0AAntenn=3D=0D=0Aa tuner is not very robust...not mu=
ch range of z match, and it=3D0D=3D0Awould =3D=0D=0Abe nice if it could wo=
rk outside the ham bands. To be fair, they=3D0D=3D0Aadver=3D=0D=0Atise it t=
o be used with VSWRs of 3:1 or less. Looks like it will be=3D0D=3D0Aea=3D=
=0D=0Asy to interface homebrewed autotuners.=3D0D=3D0AYou may as well skip =
the $239 f=3D=0D=0Aor the internal tuner and cobble up your=3D0D=3D0Aown. =
By the way, the interna=3D=0D=0Al tuner is currently sold as a=3D0D=3D0Ause=
r-installed option by AES. It goes =3D=0D=0Ain very easily.=3D0D=3D0A=3D0D=
=3D0AThe control software is not smart enough to dete=3D=0D=0Act minimized =
previous=3D0D=3D0Aversions. If you run more than one version of th=3D=0D=0A=
e control software, the=3D0D=3D0Aoperation becomes very unstable.=3D0D=3D0A=
=3D0D=3D0AA =3D=0D=0Arelay was used for TR switching...solid-state switchin=
g would have=3D0D=3D0Abee=3D=0D=0An nice. The relay makes QSK a bit clumsy =
and noisy, but it does seem=3D0D=3D0At=3D=0D=0Ao work pretty well (with lim=
ited testing) up to about 30 WPM.=3D0D=3D0A=3D0D=3D0AAn=3D=0D=0Ayway, that=
=3D92s my initial take on the 505DSP. So far I like it and I=3D92m=3D=0D=
=0A=3D0D=3D0Aglad I bought it. If you have any specific questions, I=3D92d=
be glad =3D=0D=0Ato=3D0D=3D0Atry and answer them.=3D0D=3D0A73...=3D0D=3D0A=

Hello Ed,

I don't remember it asking for this info when I installed mine (version
1.0). You might try using the serial number typed on the front of the
diskette as the password...

Subject: GAP Antennas

Dave
SWR on 6M is around 1:1.5 to 1:2 depending on the freq.
Next question did I change or tune anything? NO.
I'm using an ICOM 706 Without a tuner.
Just go with it
I talked to a guy who could use it on 160M.
SWR on 160M is about a zillion to one for me.
Merry Christmas

Subject: Equipment Dust Covers Wanted

Some years ago the was a company in New England called CoverCraft, who made heavy vinyl dust covers for ham equipment. Well they don't anymore.

Does anyone know of an alternate source? Or seen any gathering dust in some electronics shop? Specifically needed are covers for TS-520, IC-730, FT-900, KWM-2, 30L-1, SB-200, HT-.....etc.

Thanks,
K0MB

Subject: TS-430S meter light

Use your meter to see if it's a 12 volt or 120 volt panel lamp,
then save yourself some time and money and go to radio
shack and get a small panel lamp. That's what I did for my
ts-700a.

From: Austin Powers <Powers@ix.netcom.com>
Subject: TS570S vs IC756 vs FT920

I stand corrected. The CTCSS is included with the FT-920 plus Digital Voice
Keyer.
These are usually EXTRAS for other brands so I guess it all evens out.
STILL....Charging
for FM is "cheesy". The AM filter is first rate but I suggest you buy it from
INRAD instead of Yaesu.
The scope on the IC-756 is too slow and as QST say"like choppy seas".

Austin Powers

From: cdurand@tri.com
Subject: Extended Receive Standard?

Here is a question? Why don't amateur radio equipment manufacturers
build all their units with extended receive standard? I know some
companies do already, but not all. I know I would like to have extended
receive on a few of my radios and could care less about extended
transmit. I myself see no reason why someone should be able to transmit
on the local cops repeater for any reason. If you have a reason the cops
will give you a radio.

Just a thought, I just finished reading a story about a kid you was
jamming the local police with his handheld and thought he might not have
done it if the option hadn't been so easily obtained.

AFrom: Ed Picha <edpi@mcs.com>=3D0D=3D0ASubject: Ka=3D=0D=0Achina 505DSP- 1=
st impressions (kinda long)=3D0D=3D0A=3D0D=3D0AHey folks...=3D0D=3D0A=3D0D=
=3D=0D=0A=3D0AThere=3D92s been a bit of interest in the Kachina 505DSP on t=
his newsgroup=3D=0D=0A,=3D0D=3D0Aso =3D0D=3D0AI thought I would share my ex=
periences with this rig after =3D=0D=0Aa few weeks=3D0D=3D0Aof playing with=
it. I won=3D92t dwell on the specs or featu=3D=0D=0Ares since they=3D0D=
=3D0Aare fairly well described on the Kachina web page,=3D0D=3D=0D=0A=3D0Ah=
ttp://www.kachina-az.com, and in the full page ads in QST.=3D0D=3D0A=3D0D=
=3D0AO=3D=0D=0Averall, the radio performs well, meets all the specs I have =
been able=3D0D=3D0A=3D=0D=0Ato test, and is a=3D0D=3D0Areal blast to play w=
ith. I have gotten used to the =3D=0D=0Atuning scheme of=3D0D=3D0Ausing a =
mouse to click UP or DOWN on the digit to be =3D=0D=0Achanged, and=3D0D=3D0=
Aalthough it=3D92s hard to get used to at first, it does gro=3D=0D=0Aw on y=
ou. I=3D0D=3D0Ahaven=3D92t experienced any problems due to noise generated=
=3D=0D=0A by the computer=3D0D=3D0Aor monitor.=3D0D=3D0A=3D0D=3D0AI=3D92ve =
controlled the radio wi=3D=0D=0Ath two W95 machines (no-name P100 and IBM=
=3D0D=3D0AThinkpad 760ED laptop) with =3D=0D=0Ano problems. Control is ver=
y real-time,=3D0D=3D0Awith no noticeable lag betwee=3D=0D=0An activating a =
control and hearing the=3D0D=3D0Aeffect in the radio. The user =3D=0D=0Ain=
terface is very intuitive, and it=3D0D=3D0Adoesn=3D92t take long at all to =
get =3D=0D=0Acomfortable using the radio. You can do=3D0D=3D0Amost operatio=

n either with the=3D=0D=0A mouse or with keyboard. If you get lost,=3D0D=
=3D0Athere=3D92s a =3D93cheat sheet=3D=0D=0A=3D94 with most of the major si=
ngle-keystroke=3D0D=3D0Acommands, and there=3D92s al=3D=0D=0Aways the pull-=
down help that goes into more=3D0D=3D0Adetail. You can download a=3D=0D=0A =
demo version of the software that will give=3D0D=3D0Ayou a good feeling for=
ho=3D=0D=0Aw it works from Kachina'a web site.=3D0D=3D0A=3D0D=3D0AI did s=
ome basic bench chec=3D=0D=0Aks, and the radio was well within specs for=3D=
0D=3D0Apower-out and receive sens=3D=0D=0Aitivity. I plan to do more detai=
led tests=3D0D=3D0A(particularly on receiver p=3D=0D=0Aerformance) when I c=
an get the equipment=3D0D=3D0Atogether at work.=3D0D=3D0A=3D0D=3D0A=3D=0D=
=0AI did my own little PA torture tests by running the radio for 24 hours,=
=3D0D=3D=0D=0A=3D0ACW full power out into a dummy load, keyed by a memory k=
eyer in beacon=3D=0D=0A=3D0D=3D0Amode. I also tested continuous duty PA pe=
rformance by keying in CW m=3D=0D=0Aode=3D0D=3D0Acontinuously for 30 minute=
s. In both tests, there was no power ou=3D=0D=0Atput=3D0D=3D0Aslump, and t=
he PA temperature stayed under +50 C.=3D0D=3D0A=3D0D=3D0ALIKE=3D=0D=0AS:=3D=
0D=3D0ADSP-based noise reduction can be very effective! Likewise the auto=
=3D=0D=0Amatic=3D0D=3D0Anotch.=3D0D=3D0A=3D0D=3D0AAbility to tailor transmi=
t audio response is a=3D=0D=0A nice feature. I=3D92ve=3D0D=3D0Agotten many=
unsolicited positive comments on th=3D=0D=0Ae general audio quality,=3D0D=
=3D0Aboth with the speech processor and without.=3D=0D=0A=3D0D=3D0A=3D0D=3D=
0ASpectrum analyzer is useful, and it=3D92s slick to be able to cli=3D=0D=
=0Ack on a=3D0D=3D0Asignal you see in the analyzer window and have the radi=
o autom=3D=0D=0Aagically=3D0D=3D0Atuned to that frequency.=3D0D=3D0A=3D0D=
=3D0AI like the idea of a cali=3D=0D=0Abrated S-meter that is accurate on a=
ll bands. =3D0D=3D0A(I checked...it=3D92s wel=3D=0D=0Al within the claimed =
+/- 5 dB accuracy). It=3D92s also=3D0D=3D0Anice to be able =3D=0D=0Ato con=
figure the S-meter to read in dBm, uV, or S units.=3D0D=3D0A=3D0D=3D0AThere=
a=3D=0D=0Are two antenna ports that you can assign by band, or use one for=
=3D0D=3D0Atrans=3D=0D=0Amit and one for receive. This setup accommodates t=
he typical=3D0D=3D0Ainstalla=3D=0D=0Ation where you have a wire antenna for=
80/40 and a beam for the=3D0D=3D0Ahigher=3D=0D=0A frequency bands=3D0D=3D0=
A=3D0D=3D0AThe squelch operation is neat...there are two m=3D=0D=0Aodes, le=
vel and=3D0D=3D0Asyllabic. With level, you can set the absolute level =3D=
=0D=0Afor squelch=3D0D=3D0Athreshold. With syllabic squelch, the radio loo=
ks for sig=3D=0D=0Anals that have=3D0D=3D0Acharacteristics of voice. In ca=
se you=3D92re wondering w=3D=0D=0Ahat good a squelch=3D0D=3D0Afeature is on=
an HF radio, I use it for scanning of=3D=0D=0A shortwave utility=3D0D=3D0A=
frequencies. Speaking of scanning, it works pretty=3D=0D=0A well too, alth=
ough=3D0D=3D0Athe scan speed could be improved. The minimum =3D93=3D=0D=0A=
dwell time=3D94 is 200 mS,=3D0D=3D0Aso the maximum scan rate is something l=
ike 5 =3D=0D=0Achannels per second. In=3D0D=3D0Aaddition to scanning the 1=
00 programmable cha=3D=0D=0Annels, you can scan a=3D0D=3D0Aprogrammable fre=
quency range.=3D0D=3D0A=3D0D=3D0AThe cho=3D=0D=0Aice of IF filters (Hz):=3D=
0D=3D0A=3D0D=3D0A6000, 3500, 2700, 2400, 2100, 1700, 1000=3D=0D=0A, 500, 20=
0, 100, DATAHI, DATAMED=3D0D=3D0A=3D0D=3D0A is OK, and the filters work we=
=3D=0D=0All. It would have been nice to have=3D0D=3D0Acontinuously variabl=
e filtering l=3D=0D=0Aike some of the external DSP boxes=3D0D=3D0Ahave. Th=
e DATA filters are 500 Hz =3D=0D=0Awide, and have center frequencies of=3D0=
D=3D0A2210 Hz (DATA HI) and 1700 Hz (DA=3D=0D=0ATA MED). Center freqs can =

be moved=3D0D=3D0Ausing IF shift.=3D0D=3D0A=3D0D=3D0AAlmost =3D=0D=0Aeveryt=
hing you could want for interfacing the radio is brought=3D0D=3D0Aout on =
=3D=0D=0Athree accessory connectors. Connectors are provided for=3D0D=3D0A=
audio/PTT/mis=3D=0D=0Ac (DB25), antenna tuner (DB9) and external amplifier=
=3D0D=3D0Acontrol (DB15). =3D=0D=0ANice that they used three different siz=
ed connectors so=3D0D=3D0Athat there=3D92s=3D=0D=0A no way to screw up by p=
lugging the wrong connector in the=3D0D=3D0Awrong jack.=3D=0D=0A=3D0D=3D0A=
=3D0D=3D0ADISLIKES:=3D0D=3D0A=3D0D=3D0AThe =3D93whisper=3D94 fan on the PA=
is notice=3D=0D=0Aably loud and is not=3D0D=3D0Athermostatically controlle=
d. Instead it runs all=3D=0D=0A the time. Fan noise=3D0D=3D0Ais a functio=
n of main supply voltage...at 12 V, =3D=0D=0Ait=3D92s pretty quiet. By=3D0=
D=3D0Athe time you run it at 13.8V, it=3D92s pretty n=3D=0D=0Aoisy.=3D0D=3D=
0A=3D0D=3D0AThere=3D92s no FM mode.=3D0D=3D0A=3D0D=3D0AThere=3D92s no low-l=
evel RF=3D=0D=0A jacks for transverter operation. =3D0D=3D0A=3D0D=3D0AThe m=
anual is light, no discu=3D=0D=0Assion of operation. However, you can get =
a=3D0D=3D0Agood theory of operation s=3D=0D=0Aection from the Kachina web p=
age and Kachina=3D0D=3D0Awill send schematics on r=3D=0D=0Aequest. There is=
currently no service manual=3D0D=3D0Aavailable. By the way, t=3D=0D=0Ahe =
folks at Kachina have been VERY responsive,=3D0D=3D0Aboth by email and by t=
e=3D=0D=0Alephone.=3D0D=3D0A=3D0D=3D0AWhy doesn=3D92t notch, IF shift, and =
noise reduction work=3D=0D=0A in AM mode? Also,=3D0D=3D0Ayou have no choic=
e of filtering in AM....6 KHz is =3D=0D=0Ait, like it or not.=3D0D=3D0A=3D0=
D=3D0AOn CW, you can select right-handed keyer, le=3D=0D=0Aft-handed keyer =
or straight=3D0D=3D0Akey modes. (Nice touch, accommodating pad=3D=0D=0Adle=
s wired any which way!)=3D0D=3D0AWhen you select straight key and use an ex=
t=3D=0D=0Aernal keyer, it appears that=3D0D=3D0Athe self-completing featur=
e of the keyer=3D=0D=0A is still active. If you have=3D0D=3D0Athe external=
keyer set to a speed that =3D=0D=0Ais FASTER than the speed set on=3D0D=3D=
0Athe internal keyer, the radio does not=3D=0D=0A follow the external keyin=
g very=3D0D=3D0Awell. The simple workaround is to se=3D=0D=0At the interna=
l keyer speed to max=3D0D=3D0A(80WPM) when using an external keyer=3D=0D=0A=
.=3D0D=3D0A=3D0D=3D0AI can=3D92t find a way to generate a continuous TUNE s=
ignal shor=3D=0D=0At of=3D0D=3D0Aplugging a good old straight key into the =
jack.=3D0D=3D0A=3D0D=3D0AAntenn=3D=0D=0Aa tuner is not very robust...not mu=
ch range of z match, and it=3D0D=3D0Awould =3D=0D=0Abe nice if it could wo=
rk outside the ham bands. To be fair, they=3D0D=3D0Aadver=3D=0D=0Atise it t=
o be used with VSWRs of 3:1 or less. Looks like it will be=3D0D=3D0Aea=3D=
=0D=0Asy to interface homebrewed autotuners.=3D0D=3D0AYou may as well skip =
the $239 f=3D=0D=0Aor the internal tuner and cobble up your=3D0D=3D0Aown. =
By the way, the interna=3D=0D=0Al tuner is currently sold as a=3D0D=3D0Ause=
r-installed option by AES. It goes =3D=0D=0Ain very easily.=3D0D=3D0A=3D0D=
=3D0AThe control software is not smart enough to dete=3D=0D=0Act minimized =
previous=3D0D=3D0Aversions. If you run more than one version of th=3D=0D=0A=
e control software, the=3D0D=3D0Aoperation becomes very unstable.=3D0D=3D0A=
=3D0D=3D0AA =3D=0D=0Arelay was used for TR switching...solid-state switchin=
g would have=3D0D=3D0Abee=3D=0D=0An nice. The relay makes QSK a bit clumsy =
and noisy, but it does seem=3D0D=3D0At=3D=0D=0Ao work pretty well (with lim=
ited testing) up to about 30 WPM.=3D0D=3D0A=3D0D=3D0AAn=3D=0D=0Ayway, that=
=3D92s my initial take on the 505DSP. So far I like it and I=3D92m=3D=0D=
=0A=3D0D=3D0Aglad I bought it. If you have any specific questions, I=3D92d=

be glad =3D=0D=0Ato=3D0D=3D0Atry and answer them.=3D0D=3D0A73...=3D0D=3D0A=

Hello Ed,

I don't remember it asking for this info when I installed mine (version
1.0). You might try using the serial number typed on the front of the
diskette as the password...

Dave
SWR on 6M is around 1:1.5 to 1:2 depending on the freq.
Next question did I change or tune anything? NO.
I'm using an ICOM 706 Without a tuner.
Just go with it
I talked to a guy who could use it on 160M.
SWR on 160M is about a zillion to one for me.
Merry Christmas

Subject: Equipment Dust Covers Wanted

Some years ago the was a company in New England called CoverCraft, who made heavy vinyl dust covers for ham equipment. Well they don't anymore.

Does anyone know of an alternate source? Or seen any gathering dust in some electronics shop? Specifically needed are covers for TS-520, IC-730, FT-900, KWM-2, 30L-1, SB-200, HT-.......etc.

Thanks,
K0MB

Subject: TS-430S meter light

Use your meter to see if it's a 12 volt or 120 volt panel lamp,
then save yourself some time and money and go to radio
shack and get a small panel lamp. That's what I did for my
ts-700a.

From: Austin Powers <Powers@ix.netcom.com>
Subject: TS570S vs IC756 vs FT920

I stand corrected. The CTCSS is included with the FT-920 plus Digital Voice
Keyer.
These are usually EXTRAS for other brands so I guess it all evens out.
STILL....Charging
for FM is "cheesy". The AM filter is first rate but I suggest you buy it from
INRAD instead of Yaesu.
The scope on the IC-756 is too slow and as QST say"like choppy seas".

Austin Powers

From: cdurand@tri.com
Subject: Extended Receive Standard?

Here is a question? Why don't amateur radio equipment manufacturers
build all their units with extended receive standard? I know some
companies do already, but not all. I know I would like to have extended
receive on a few of my radios and could care less about extended
transmit. I myself see no reason why someone should be able to transmit
on the local cops repeater for any reason. If you have a reason the cops
will give you a radio.

Just a thought, I just finished reading a story about a kid you was
jamming the local police with his handheld and thought he might not have
done it if the option hadn't been so easily obtained.

AFrom: Ed Picha <edpi@mcs.com>=3D0D=3D0ASubject: Ka=3D=0D=0Achina 505DSP- 1=
st impressions (kinda long)=3D0D=3D0A=3D0D=3D0AHey folks...=3D0D=3D0A=3D0D=
=3D=0D=0A=3D0AThere=3D92s been a bit of interest in the Kachina 505DSP on t=
his newsgroup=3D=0D=0A,=3D0D=3D0Aso =3D0D=3D0AI thought I would share my ex=
periences with this rig after =3D=0D=0Aa few weeks=3D0D=3D0Aof playing with=
it. I won=3D92t dwell on the specs or featu=3D=0D=0Ares since they=3D0D=
=3D0Aare fairly well described on the Kachina web page,=3D0D=3D=0D=0A=3D0Ah=
ttp://www.kachina-az.com, and in the full page ads in QST.=3D0D=3D0A=3D0D=
=3D0AO=3D=0D=0Averall, the radio performs well, meets all the specs I have =
been able=3D0D=3D0A=3D=0D=0Ato test, and is a=3D0D=3D0Areal blast to play w=
ith. I have gotten used to the =3D=0D=0Atuning scheme of=3D0D=3D0Ausing a =
mouse to click UP or DOWN on the digit to be =3D=0D=0Achanged, and=3D0D=3D0=
Aalthough it=3D92s hard to get used to at first, it does gro=3D=0D=0Aw on y=
ou. I=3D0D=3D0Ahaven=3D92t experienced any problems due to noise generated=
=3D=0D=0A by the computer=3D0D=3D0Aor monitor.=3D0D=3D0A=3D0D=3D0AI=3D92ve =
controlled the radio wi=3D=0D=0Ath two W95 machines (no-name P100 and IBM=
=3D0D=3D0AThinkpad 760ED laptop) with =3D=0D=0Ano problems. Control is ver=

y real-time,=3D0D=3D0Awith no noticeable lag betwee=3D=0D=0An activating a =
control and hearing the=3D0D=3D0Aeffect in the radio. The user =3D=0D=0Ain=
terface is very intuitive, and it=3D0D=3D0Adoesn=3D92t take long at all to =
get =3D=0D=0Acomfortable using the radio. You can do=3D0D=3D0Amost operatio=
n either with the=3D=0D=0A mouse or with keyboard. If you get lost,=3D0D=
=3D0Athere=3D92s a =3D93cheat sheet=3D=0D=0A=3D94 with most of the major si=
ngle-keystroke=3D0D=3D0Acommands, and there=3D92s al=3D=0D=0Aways the pull-=
down help that goes into more=3D0D=3D0Adetail. You can download a=3D=0D=0A =
demo version of the software that will give=3D0D=3D0Ayou a good feeling for=
ho=3D=0D=0Aw it works from Kachina'a web site.=3D0D=3D0A=3D0D=3D0AI did s=
ome basic bench chec=3D=0D=0Aks, and the radio was well within specs for=3D=
0D=3D0Apower-out and receive sens=3D=0D=0Aitivity. I plan to do more detai=
led tests=3D0D=3D0A(particularly on receiver p=3D=0D=0Aerformance) when I c=
an get the equipment=3D0D=3D0Atogether at work.=3D0D=3D0A=3D0D=3D0A=3D=0D=
=0AI did my own little PA torture tests by running the radio for 24 hours,=
=3D0D=3D=0D=0A=3D0ACW full power out into a dummy load, keyed by a memory k=
eyer in beacon=3D=0D=0A=3D0D=3D0Amode. I also tested continuous duty PA pe=
rformance by keying in CW m=3D=0D=0Aode=3D0D=3D0Acontinuously for 30 minute=
s. In both tests, there was no power ou=3D=0D=0Atput=3D0D=3D0Aslump, and t=
he PA temperature stayed under +50 C.=3D0D=3D0A=3D0D=3D0ALIKE=3D=0D=0AS:=3D=
0D=3D0ADSP-based noise reduction can be very effective! Likewise the auto=
=3D=0D=0Amatic=3D0D=3D0Anotch.=3D0D=3D0A=3D0D=3D0AAbility to tailor transmi=
t audio response is a=3D=0D=0A nice feature. I=3D92ve=3D0D=3D0Agotten many=
unsolicited positive comments on th=3D=0D=0Ae general audio quality,=3D0D=
=3D0Aboth with the speech processor and without.=3D=0D=0A=3D0D=3D0A=3D0D=3D=
0ASpectrum analyzer is useful, and it=3D92s slick to be able to cli=3D=0D=
=0Ack on a=3D0D=3D0Asignal you see in the analyzer window and have the radi=
o autom=3D=0D=0Aagically=3D0D=3D0Atuned to that frequency.=3D0D=3D0A=3D0D=
=3D0AI like the idea of a cali=3D=0D=0Abrated S-meter that is accurate on a=
ll bands. =3D0D=3D0A(I checked...it=3D92s wel=3D=0D=0Al within the claimed =
+/- 5 dB accuracy). It=3D92s also=3D0D=3D0Anice to be able =3D=0D=0Ato con=
figure the S-meter to read in dBm, uV, or S units.=3D0D=3D0A=3D0D=3D0AThere=
a=3D=0D=0Are two antenna ports that you can assign by band, or use one for=
=3D0D=3D0Atrans=3D=0D=0Amit and one for receive. This setup accommodates t=
he typical=3D0D=3D0Ainstalla=3D=0D=0Ation where you have a wire antenna for=
80/40 and a beam for the=3D0D=3D0Ahigher=3D=0D=0A frequency bands=3D0D=3D0=
A=3D0D=3D0AThe squelch operation is neat...there are two m=3D=0D=0Aodes, le=
vel and=3D0D=3D0Asyllabic. With level, you can set the absolute level =3D=
=0D=0Afor squelch=3D0D=3D0Athreshold. With syllabic squelch, the radio loo=
ks for sig=3D=0D=0Anals that have=3D0D=3D0Acharacteristics of voice. In ca=
se you=3D92re wondering w=3D=0D=0Ahat good a squelch=3D0D=3D0Afeature is on=
an HF radio, I use it for scanning of=3D=0D=0A shortwave utility=3D0D=3D0A=
frequencies. Speaking of scanning, it works pretty=3D=0D=0A well too, alth=
ough=3D0D=3D0Athe scan speed could be improved. The minimum =3D93=3D=0D=0A=
dwell time=3D94 is 200 mS,=3D0D=3D0Aso the maximum scan rate is something l=
ike 5 =3D=0D=0Achannels per second. In=3D0D=3D0Aaddition to scanning the 1=
00 programmable cha=3D=0D=0Annels, you can scan a=3D0D=3D0Aprogrammable fre=
quency range.=3D0D=3D0A=3D0D=3D0AThe cho=3D=0D=0Aice of IF filters (Hz):=3D=
0D=3D0A=3D0D=3D0A6000, 3500, 2700, 2400, 2100, 1700, 1000=3D=0D=0A, 500, 20=
0, 100, DATAHI, DATAMED=3D0D=3D0A=3D0D=3D0A is OK, and the filters work we=

=3D=0D=0All. It would have been nice to have=3D0D=3D0Acontinuously variabl=
e filtering l=3D=0D=0Aike some of the external DSP boxes=3D0D=3D0Ahave. Th=
e DATA filters are 500 Hz =3D=0D=0Awide, and have center frequencies of=3D0=
D=3D0A2210 Hz (DATA HI) and 1700 Hz (DA=3D=0D=0ATA MED). Center freqs can =
be moved=3D0D=3D0Ausing IF shift.=3D0D=3D0A=3D0D=3D0AAlmost =3D=0D=0Aeveryt=
hing you could want for interfacing the radio is brought=3D0D=3D0Aout on =
=3D=0D=0Athree accessory connectors. Connectors are provided for=3D0D=3D0A=
audio/PTT/mis=3D=0D=0Ac (DB25), antenna tuner (DB9) and external amplifier=
=3D0D=3D0Acontrol (DB15). =3D=0D=0ANice that they used three different siz=
ed connectors so=3D0D=3D0Athat there=3D92s=3D=0D=0A no way to screw up by p=
lugging the wrong connector in the=3D0D=3D0Awrong jack.=3D=0D=0A=3D0D=3D0A=
=3D0D=3D0ADISLIKES:=3D0D=3D0A=3D0D=3D0AThe =3D93whisper=3D94 fan on the PA=
is notice=3D=0D=0Aably loud and is not=3D0D=3D0Athermostatically controlle=
d. Instead it runs all=3D=0D=0A the time. Fan noise=3D0D=3D0Ais a functio=
n of main supply voltage...at 12 V, =3D=0D=0Ait=3D92s pretty quiet. By=3D0=
D=3D0Athe time you run it at 13.8V, it=3D92s pretty n=3D=0D=0Aoisy.=3D0D=3D=
0A=3D0D=3D0AThere=3D92s no FM mode.=3D0D=3D0A=3D0D=3D0AThere=3D92s no low-l=
evel RF=3D=0D=0A jacks for transverter operation. =3D0D=3D0A=3D0D=3D0AThe m=
anual is light, no discu=3D=0D=0Assion of operation. However, you can get =
a=3D0D=3D0Agood theory of operation s=3D=0D=0Aection from the Kachina web p=
age and Kachina=3D0D=3D0Awill send schematics on r=3D=0D=0Aequest. There is=
currently no service manual=3D0D=3D0Aavailable. By the way, t=3D=0D=0Ahe =
folks at Kachina have been VERY responsive,=3D0D=3D0Aboth by email and by t=
e=3D=0D=0Alephone.=3D0D=3D0A=3D0D=3D0AWhy doesn=3D92t notch, IF shift, and =
noise reduction work=3D=0D=0A in AM mode? Also,=3D0D=3D0Ayou have no choic=
e of filtering in AM....6 KHz is =3D=0D=0Ait, like it or not.=3D0D=3D0A=3D0=
D=3D0AOn CW, you can select right-handed keyer, le=3D=0D=0Aft-handed keyer =
or straight=3D0D=3D0Akey modes. (Nice touch, accommodating pad=3D=0D=0Adle=
s wired any which way!)=3D0D=3D0AWhen you select straight key and use an ex=
t=3D=0D=0Aernal keyer, it appears that=3D0D=3D0Athe self-completing featur=
e of the keyer=3D=0D=0A is still active. If you have=3D0D=3D0Athe external=
keyer set to a speed that =3D=0D=0Ais FASTER than the speed set on=3D0D=3D=
0Athe internal keyer, the radio does not=3D=0D=0A follow the external keyin=
g very=3D0D=3D0Awell. The simple workaround is to se=3D=0D=0At the interna=
l keyer speed to max=3D0D=3D0A(80WPM) when using an external keyer=3D=0D=0A=
.=3D0D=3D0A=3D0D=3D0AI can=3D92t find a way to generate a continuous TUNE s=
ignal shor=3D=0D=0At of=3D0D=3D0Aplugging a good old straight key into the =
jack.=3D0D=3D0A=3D0D=3D0AAntenn=3D=0D=0Aa tuner is not very robust...not mu=
ch range of z match, and it=3D0D=3D0Awould =3D=0D=0Abe nice if it could wo=
rk outside the ham bands. To be fair, they=3D0D=3D0Aadver=3D=0D=0Atise it t=
o be used with VSWRs of 3:1 or less. Looks like it will be=3D0D=3D0Aea=3D=
=0D=0Asy to interface homebrewed autotuners.=3D0D=3D0AYou may as well skip =
the $239 f=3D=0D=0Aor the internal tuner and cobble up your=3D0D=3D0Aown. =
By the way, the interna=3D=0D=0Al tuner is currently sold as a=3D0D=3D0Ause=
r-installed option by AES. It goes =3D=0D=0Ain very easily.=3D0D=3D0A=3D0D=
=3D0AThe control software is not smart enough to dete=3D=0D=0Act minimized =
previous=3D0D=3D0Aversions. If you run more than one version of th=3D=0D=0A=
e control software, the=3D0D=3D0Aoperation becomes very unstable.=3D0D=3D0A=
=3D0D=3D0AA =3D=0D=0Arelay was used for TR switching...solid-state switchin=
g would have=3D0D=3D0Abee=3D=0D=0An nice. The relay makes QSK a bit clumsy =

and noisy, but it does seem=3D0D=3D0At=3D=0D=0Ao work pretty well (with lim=
ited testing) up to about 30 WPM.=3D0D=3D0A=3D0D=3D0AAn=3D=0D=0Ayway, that=
=3D92s my initial take on the 505DSP. So far I like it and I=3D92m=3D=0D=
=0A=3D0D=3D0Aglad I bought it. If you have any specific questions, I=3D92d=
be glad =3D=0D=0Ato=3D0D=3D0Atry and answer them.=3D0D=3D0A73...=3D0D=3D0A=

1887. Re: Icom IC-756A???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-21 00:00:00 UTC
From: ylshih@alumni.caltech.edu
Message-ID: <67iet8$g5e@gap.cco.caltech.edu>
Source record: 158659

In article <349A898E.B879A9E9@jnlk.com>, Cregger <ecregger@jnlk.com> wrote:
>For instance, take the IC-706, please (pah-rump-pump!). The design should never have gone >into production. The Mk II should have been the original IC-706. There are no quantum >leap, hi-tech improvements incorporated in the Mk. II. Just plain old common sense changes >that should have been incorporated from the very beginning. Inadvertantly (I hope), Icom >has disenfranchised many owners of the original 706 by seriously eroding the resale value >of the unit with the introduction of the Mk. II. Most hams that I know are not rich, and >many depend on a good resale value of an existing rig to help finance the purchase of the >latest and greatest equipment. That is how I operate.

I disagree with this premise. If a radio design is "defective", that requires some correction by the manufacturer because there is an actual or implied warranty that the unit meets specs or accepted performance standards. If the difference is features, then I would say that a buyer makes the decision *at the time of purchase* that the price of the radio equals or exceeds the benefits he expects to get. This expectation may or may not, depending on whether the buyer is a short or long term buyer, include a guess on resale value based on the history of the manufacturer.

No one can predict the future with accuracy. ICOM was not obligated to produce a 706MkII and probably wouldn't have if the 706 had been poorly received. Because it was well received, they went back and said "how can we make it even better". I would say that the early purchasers of the 706 got the radio they thought they were buying, else it wouldn't have been popular. The later purchasers of the 706MkII also got the radio they wanted, and it may even have been the specific changes in the MkII that induced the later purchasers to buy it rather than the first version. It seems to me that everyone got what they thought they were buying.

We know now that an initial introduction of a 706MkII would have been successful, but Icom didn't know then. Raising the cost of product design in an environment that demands that an initial design be "perfect" and "lasting" can only reduce the number of new designs attempted. The original 706 might never have been introduced at all, to be later improved, under these conditions. Are we better or worse off then?

I would also point out that the companies that do specialize in "perfect" and "lasting" designs, two examples being Porsche cars or Hasselblad cameras, do tend to have high resale value. But they also have extremely high initial prices. This doesn't

benefit the price-conscious consumer.

I understand the raw feeling you get when you paid good money for something that is dropped in price 12 months later or is revised for an increase in benfit. But you have to recognize that you also had the unit for 12 months of use. Look at personal computers. Everyone knows that the hot machine of today is the mass market machine of next Christmas and the inventory closeout of the following summer. When you go to buy, you just have to factor that in and decide whether the benefit is worth the price *today*.

I own an FT-920. The CTCSS encoder is built into the radio -- it is not
an extra cost option.

73, Jim, K5NTX

Hello Ed,

I don't remember it asking for this info when I installed mine (version
1.0). You might try using the serial number typed on the front of the
diskette as the password...

Dave
SWR on 6M is around 1:1.5 to 1:2 depending on the freq.
Next question did I change or tune anything? NO.
I'm using an ICOM 706 Without a tuner.
Just go with it
I talked to a guy who could use it on 160M.
SWR on 160M is about a zillion to one for me.
Merry Christmas

Some years ago the was a company in New England called CoverCraft, who made
heavy vinyl dust covers for ham equipment. Well they don't anymore.

Does anyone know of an alternate source? Or seen any gathering dust in some
electronics shop? Specifically needed are covers for TS-520, IC-730, FT-900,
KWM-2, 30L-1, SB-200, HT-.......etc.

Thanks,
K0MB

Use your meter to see if it's a 12 volt or 120 volt panel lamp,
then save yourself some time and money and go to radio
shack and get a small panel lamp. That's what I did for my
ts-700a.

From: Austin Powers <Powers@ix.netcom.com>
Subject: TS570S vs IC756 vs FT920

I stand corrected. The CTCSS is included with the FT-920 plus Digital Voice
Keyer.
These are usually EXTRAS for other brands so I guess it all evens out.
STILL....Charging
for FM is "cheesy". The AM filter is first rate but I suggest you buy it from

INRAD instead of Yaesu.
The scope on the IC-756 is too slow and as QST say"like choppy seas".

Austin Powers

From: cdurand@tri.com
Subject: Extended Receive Standard?

Here is a question? Why don't amateur radio equipment manufacturers
build all their units with extended receive standard? I know some
companies do already, but not all. I know I would like to have extended
receive on a few of my radios and could care less about extended
transmit. I myself see no reason why someone should be able to transmit
on the local cops repeater for any reason. If you have a reason the cops

will give you a radio.

Just a thought, I just finished reading a story about a kid you was
jamming the local police with his handheld and thought he might not have
done it if the option hadn't been so easily obtained.

an use. For=3D0D=3D0A>instan=3D=0D=0Ace, someone said that Icom Tx audio is=
tailored for=3D0D=3D0A>DXing. That's nic=3D=0D=0Ae, but how about adding a=
button that=3D0D=3D0A>permits the user to select a li=3D=0D=0Attle better =
EQ for=3D0D=3D0A>ragchewing? THAT would be a feature I would find v=3D=0D=
=0Aaluable in=3D0D=3D0A>a low priced ham rig.=3D0D=3D0A=3D0D=3D0A=3D0D=3D0A=
Yaesu has included=3D=0D=0A a few things in the FT-920 that I did find=3D0=
D=3D0Auseful. It allows four dif=3D=0D=0Aferent EQ settings, which do chang=
e=3D0D=3D0Athe audio considerably.=3D0D=3D0A It a=3D=0D=0Also has a built-i=
n digital voice recorder, which I realize is=3D0D=3D0Anot for =3D=0D=0Aever=
yone, but I am somewhat of a contester, and I=3D0D=3D0Aabsolutely love it.=
=3D=0D=0A=3D0D=3D0A The 920 also will increment serial numbers from it's CW=
memory=3D0D=3D0A=3D=0D=0Akeyer. Another contester plus. Again, I realize i=
t's not for everyone,=3D0D=3D=0D=0A=3D0Abut then again, you can't build a r=
adio for "everyone".=3D0D=3D0A=3D0D=3D0AHappy=3D=0D=0A Holidays=3D0D=3D0ABo=

AFrom: Ed Picha <edpi@mcs.com>=3D0D=3D0ASubject: Ka=3D=0D=0Achina 505DSP- 1=
st impressions (kinda long)=3D0D=3D0A=3D0D=3D0AHey folks...=3D0D=3D0A=3D0D=
=3D=0D=0A=3D0AThere=3D92s been a bit of interest in the Kachina 505DSP on t=
his newsgroup=3D=0D=0A,=3D0D=3D0Aso =3D0D=3D0AI thought I would share my ex=
periences with this rig after =3D=0D=0Aa few weeks=3D0D=3D0Aof playing with=
it. I won=3D92t dwell on the specs or featu=3D=0D=0Ares since they=3D0D=
=3D0Aare fairly well described on the Kachina web page,=3D0D=3D=0D=0A=3D0Ah=

ttp://www.kachina-az.com, and in the full page ads in QST.=3D0D=3D0A=3D0D=
=3D0AO=3D=0D=0Averall, the radio performs well, meets all the specs I have =
been able=3D0D=3D0A=3D=0D=0Ato test, and is a=3D0D=3D0Areal blast to play w=
ith. I have gotten used to the =3D=0D=0Atuning scheme of=3D0D=3D0Ausing a =
mouse to click UP or DOWN on the digit to be =3D=0D=0Achanged, and=3D0D=3D0=
Aalthough it=3D92s hard to get used to at first, it does gro=3D=0D=0Aw on y=
ou. I=3D0D=3D0Ahaven=3D92t experienced any problems due to noise generated=
=3D=0D=0A by the computer=3D0D=3D0Aor monitor.=3D0D=3D0A=3D0D=3D0AI=3D92ve =
controlled the radio wi=3D=0D=0Ath two W95 machines (no-name P100 and IBM=
=3D0D=3D0AThinkpad 760ED laptop) with =3D=0D=0Ano problems. Control is ver=
y real-time,=3D0D=3D0Awith no noticeable lag betwee=3D=0D=0An activating a =
control and hearing the=3D0D=3D0Aeffect in the radio. The user =3D=0D=0Ain=
terface is very intuitive, and it=3D0D=3D0Adoesn=3D92t take long at all to =
get =3D=0D=0Acomfortable using the radio. You can do=3D0D=3D0Amost operatio=
n either with the=3D=0D=0A mouse or with keyboard. If you get lost,=3D0D=
=3D0Athere=3D92s a =3D93cheat sheet=3D=0D=0A=3D94 with most of the major si=
ngle-keystroke=3D0D=3D0Acommands, and there=3D92s al=3D=0D=0Aways the pull-=
down help that goes into more=3D0D=3D0Adetail. You can download a=3D=0D=0A =
demo version of the software that will give=3D0D=3D0Ayou a good feeling for=
ho=3D=0D=0Aw it works from Kachina'a web site.=3D0D=3D0A=3D0D=3D0AI did s=
ome basic bench chec=3D=0D=0Aks, and the radio was well within specs for=3D=
0D=3D0Apower-out and receive sens=3D=0D=0Aitivity. I plan to do more detai=
led tests=3D0D=3D0A(particularly on receiver p=3D=0D=0Aerformance) when I c=
an get the equipment=3D0D=3D0Atogether at work.=3D0D=3D0A=3D0D=3D0A=3D=0D=
=0AI did my own little PA torture tests by running the radio for 24 hours,=
=3D0D=3D=0D=0A=3D0ACW full power out into a dummy load, keyed by a memory k=
eyer in beacon=3D=0D=0A=3D0D=3D0Amode. I also tested continuous duty PA pe=
rformance by keying in CW m=3D=0D=0Aode=3D0D=3D0Acontinuously for 30 minute=
s. In both tests, there was no power ou=3D=0D=0Atput=3D0D=3D0Aslump, and t=
he PA temperature stayed under +50 C.=3D0D=3D0A=3D0D=3D0ALIKE=3D=0D=0AS:=3D=
0D=3D0ADSP-based noise reduction can be very effective! Likewise the auto=
=3D=0D=0Amatic=3D0D=3D0Anotch.=3D0D=3D0A=3D0D=3D0AAbility to tailor transmi=
t audio response is a=3D=0D=0A nice feature. I=3D92ve=3D0D=3D0Agotten many=
unsolicited positive comments on th=3D=0D=0Ae general audio quality,=3D0D=
=3D0Aboth with the speech processor and without.=3D=0D=0A=3D0D=3D0A=3D0D=3D=
0ASpectrum analyzer is useful, and it=3D92s slick to be able to cli=3D=0D=
=0Ack on a=3D0D=3D0Asignal you see in the analyzer window and have the radi=
o autom=3D=0D=0Aagically=3D0D=3D0Atuned to that frequency.=3D0D=3D0A=3D0D=
=3D0AI like the idea of a cali=3D=0D=0Abrated S-meter that is accurate on a=
ll bands. =3D0D=3D0A(I checked...it=3D92s wel=3D=0D=0Al within the claimed =
+/- 5 dB accuracy). It=3D92s also=3D0D=3D0Anice to be able =3D=0D=0Ato con=
figure the S-meter to read in dBm, uV, or S units.=3D0D=3D0A=3D0D=3D0AThere=
a=3D=0D=0Are two antenna ports that you can assign by band, or use one for=
=3D0D=3D0Atrans=3D=0D=0Amit and one for receive. This setup accommodates t=
he typical=3D0D=3D0Ainstalla=3D=0D=0Ation where you have a wire antenna for=
80/40 and a beam for the=3D0D=3D0Ahigher=3D=0D=0A frequency bands=3D0D=3D0=
A=3D0D=3D0AThe squelch operation is neat...there are two m=3D=0D=0Aodes, le=
vel and=3D0D=3D0Asyllabic. With level, you can set the absolute level =3D=
=0D=0Afor squelch=3D0D=3D0Athreshold. With syllabic squelch, the radio loo=
ks for sig=3D=0D=0Anals that have=3D0D=3D0Acharacteristics of voice. In ca=

se you=3D92re wondering w=3D=0D=0Ahat good a squelch=3D0D=3D0Afeature is on=
an HF radio, I use it for scanning of=3D=0D=0A shortwave utility=3D0D=3D0A=
frequencies. Speaking of scanning, it works pretty=3D=0D=0A well too, alth=
ough=3D0D=3D0Athe scan speed could be improved. The minimum =3D93=3D=0D=0A=
dwell time=3D94 is 200 mS,=3D0D=3D0Aso the maximum scan rate is something l=
ike 5 =3D=0D=0Achannels per second. In=3D0D=3D0Aaddition to scanning the 1=
00 programmable cha=3D=0D=0Annels, you can scan a=3D0D=3D0Aprogrammable fre=
quency range.=3D0D=3D0A=3D0D=3D0AThe cho=3D=0D=0Aice of IF filters (Hz):=3D=
0D=3D0A=3D0D=3D0A6000, 3500, 2700, 2400, 2100, 1700, 1000=3D=0D=0A, 500, 20=
0, 100, DATAHI, DATAMED=3D0D=3D0A=3D0D=3D0A is OK, and the filters work we=
=3D=0D=0All. It would have been nice to have=3D0D=3D0Acontinuously variabl=
e filtering l=3D=0D=0Aike some of the external DSP boxes=3D0D=3D0Ahave. Th=
e DATA filters are 500 Hz =3D=0D=0Awide, and have center frequencies of=3D0=
D=3D0A2210 Hz (DATA HI) and 1700 Hz (DA=3D=0D=0ATA MED). Center freqs can =
be moved=3D0D=3D0Ausing IF shift.=3D0D=3D0A=3D0D=3D0AAlmost =3D=0D=0Aeveryt=
hing you could want for interfacing the radio is brought=3D0D=3D0Aout on =
=3D=0D=0Athree accessory connectors. Connectors are provided for=3D0D=3D0A=
audio/PTT/mis=3D=0D=0Ac (DB25), antenna tuner (DB9) and external amplifier=
=3D0D=3D0Acontrol (DB15). =3D=0D=0ANice that they used three different siz=
ed connectors so=3D0D=3D0Athat there=3D92s=3D=0D=0A no way to screw up by p=
lugging the wrong connector in the=3D0D=3D0Awrong jack.=3D=0D=0A=3D0D=3D0A=
=3D0D=3D0ADISLIKES:=3D0D=3D0A=3D0D=3D0AThe =3D93whisper=3D94 fan on the PA=
is notice=3D=0D=0Aably loud and is not=3D0D=3D0Athermostatically controlle=
d. Instead it runs all=3D=0D=0A the time. Fan noise=3D0D=3D0Ais a functio=
n of main supply voltage...at 12 V, =3D=0D=0Ait=3D92s pretty quiet. By=3D0=
D=3D0Athe time you run it at 13.8V, it=3D92s pretty n=3D=0D=0Aoisy.=3D0D=3D=
0A=3D0D=3D0AThere=3D92s no FM mode.=3D0D=3D0A=3D0D=3D0AThere=3D92s no low-l=
evel RF=3D=0D=0A jacks for transverter operation. =3D0D=3D0A=3D0D=3D0AThe m=
anual is light, no discu=3D=0D=0Assion of operation. However, you can get =
a=3D0D=3D0Agood theory of operation s=3D=0D=0Aection from the Kachina web p=
age and Kachina=3D0D=3D0Awill send schematics on r=3D=0D=0Aequest. There is=
currently no service manual=3D0D=3D0Aavailable. By the way, t=3D=0D=0Ahe =
folks at Kachina have been VERY responsive,=3D0D=3D0Aboth by email and by t=
e=3D=0D=0Alephone.=3D0D=3D0A=3D0D=3D0AWhy doesn=3D92t notch, IF shift, and =
noise reduction work=3D=0D=0A in AM mode? Also,=3D0D=3D0Ayou have no choic=
e of filtering in AM....6 KHz is =3D=0D=0Ait, like it or not.=3D0D=3D0A=3D0=
D=3D0AOn CW, you can select right-handed keyer, le=3D=0D=0Aft-handed keyer =
or straight=3D0D=3D0Akey modes. (Nice touch, accommodating pad=3D=0D=0Adle=
s wired any which way!)=3D0D=3D0AWhen you select straight key and use an ex=
t=3D=0D=0Aernal keyer, it appears that=3D0D=3D0Athe self-completing featur=
e of the keyer=3D=0D=0A is still active. If you have=3D0D=3D0Athe external=
keyer set to a speed that =3D=0D=0Ais FASTER than the speed set on=3D0D=3D=
0Athe internal keyer, the radio does not=3D=0D=0A follow the external keyin=
g very=3D0D=3D0Awell. The simple workaround is to se=3D=0D=0At the interna=
l keyer speed to max=3D0D=3D0A(80WPM) when using an external keyer=3D=0D=0A=
.=3D0D=3D0A=3D0D=3D0AI can=3D92t find a way to generate a continuous TUNE s=
ignal shor=3D=0D=0At of=3D0D=3D0Aplugging a good old straight key into the =
jack.=3D0D=3D0A=3D0D=3D0AAntenn=3D=0D=0Aa tuner is not very robust...not mu=
ch range of z match, and it=3D0D=3D0Awould =3D=0D=0Abe nice if it could wo=
rk outside the ham bands. To be fair, they=3D0D=3D0Aadver=3D=0D=0Atise it t=

o be used with VSWRs of 3:1 or less. Looks like it will be=3D0D=3D0Aea=3D=
=0D=0Asy to interface homebrewed autotuners.=3D0D=3D0AYou may as well skip =
the $239 f=3D=0D=0Aor the internal tuner and cobble up your=3D0D=3D0Aown. =
By the way, the interna=3D=0D=0Al tuner is currently sold as a=3D0D=3D0Ause=
r-installed option by AES. It goes =3D=0D=0Ain very easily.=3D0D=3D0A=3D0D=
=3D0AThe control software is not smart enough to dete=3D=0D=0Act minimized =
previous=3D0D=3D0Aversions. If you run more than one version of th=3D=0D=0A=
e control software, the=3D0D=3D0Aoperation becomes very unstable.=3D0D=3D0A=
=3D0D=3D0AA =3D=0D=0Arelay was used for TR switching...solid-state switchin=
g would have=3D0D=3D0Abee=3D=0D=0An nice. The relay makes QSK a bit clumsy =
and noisy, but it does seem=3D0D=3D0At=3D=0D=0Ao work pretty well (with lim=
ited testing) up to about 30 WPM.=3D0D=3D0A=3D0D=3D0AAn=3D=0D=0Ayway, that=
=3D92s my initial take on the 505DSP. So far I like it and I=3D92m=3D=0D=
=0A=3D0D=3D0Aglad I bought it. If you have any specific questions, I=3D92d=
be glad =3D=0D=0Ato=3D0D=3D0Atry and answer them.=3D0D=3D0A73...=3D0D=3D0A=

1889. Standards

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-21 00:00:00 UTC
From: "G.K&#65533;hn" <gkuhn@global.co.za>
Message-ID: <01bd0df0$ea2ef520$89ac03c4@gkuhn.global.co.za>
Source record: 158661

Hello there,
I'm trying to make a mold for a double 3.5 and 2.5 speaker/mike connector
and after measuring various plugs I came to the conclusion that the 3.5
plug has to stick out 14 mm, but the 2.5 plug has a 50/50 chance to be
either 11 or 11.5 mm long. Any idea where I can find some specs on these
things ??????
Regards,
Gustav Kuhn ZS1NZ

Above in good, very clean condition, loaded with all filters. Rig has small wear mark by RIT knob, not interfering with "dot" graduations, could be easily touched up. Works fine, PTO showing signs of needing a rebuild, rebuild kit included. PTO in VFO is fine. A great rig featuring simultaneous receive of two freqs.

A little work and it's darn near perfect.

$700 shipped

Alan, N3BJ

>>pre-programmed search banks, tons of features, new for $449, asking $200.
>
>Is that similar to the Pro-64 (same model number) that lists for $299.99
>(always listed for that) and has been on sale for $199.99?

Nope. this one is much better. Not to be confused with the fact that they have the same model number, this one has 400 channels, and the Pro-64 only has 400 channels.

The Pro-64, very similar to the Pro-64, has a modification that allows you to adjust the volume with a potentiometer... where the Pro-64 only has a volume control.

1892. spark gap generator

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-21 00:00:00 UTC
From: yoaders@aol.com
Message-ID: <19971221103100.FAA08596@ladder01.news.aol.com>

what does a spark gap generator actually do? when i was in high school a while back, the electronics teacher showed us a box the size of a large remote control. it was called a "spark gap generator". he said that he would go into bars on monday nights during a football game. he'd sit down at the bar and when a big play would come up, he would flick the switch and blank the picture out on the t.v. of course the bar would erupt! he also said that students who maintained a certain gpa would be instructed on how to make one for themselves. i was transferred to another school shortly after this one class. i have always wondered how these things were made and what makes it create such ferocious static. i doubt that is legal, so please dont get into trouble by posting instructions on this newsgroup. i am mostly just interested in how it does what it does. you can e-mail me privately if you wish. thanks for clearing up a mystery!

Outside the USA, very little business is conducted from the the 19th
of December until the week after new year, so many non-retail
businesses are closed for that period. Not the case in the USA, but
certainly quite common in Europe, Australia and NZ.

1900. ICOM W32A Power Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-21 00:00:00 UTC
From: Cal Kutemeier <ckuter@ix.netcom.com>
Message-ID: <67jaf5$bh9@sjx-ixn6.ix.netcom.com>
Source record: 158672

I bought a W32A a week ago and have experienced power problems with the battery pack twice. The first time when the power meter was down to 5V, the red light in the upper left corner of the keypad began to blink and the display flickered on and off. Then the display went completely dead.

I called AES and they suggests that I turn the radio on and allow the battery to drain down. I did this by monitoring one of the weather channels which transmit continuously. I then used the charger which came with the unit and charged the battery for 15 hours as specified in the owners manual.

Once the battery was charged up again, the power meter read 11V when I turned the unit on. I turned off the BEEP function and I turned off one of the two bands to conserve power. I was able to get about 2.5 to 3 hours of listening and about 10 to 15 minutes of transmitting before the radio started to act up as I described in the first paragraph. This time the power meter read 8V just before it went nuts.

Is this normal for batteries on an HT? Also, when I bought the radio the plastic bag was open and did not contain an ICOM seal on it. I did not think about it when I bought it, but when the spare battery case that I ordered was delivered on Friday, this $35 piece was in a plastic bag that did have an ICOM seal on it. I am surprised that a less expensive piece would be sealed and the actual radio would not be sealed.

I will appreciate reading any comments. Thanks in advance.

These have been in existence for a long time. Just about any type of
spark gap will disrupt TV reception to some degree. Cable TV type
connections are a bit more immune to this type of jamming, but can
still be jammed. We used many different types of transformers to come
up with the high voltage. The easiest to come up with is a standard
cylinder type of auto ignition coil. These work fine but are almost
too large to carry around. Newer types of voltage multiplier
circuits, found in many text books, combined with smaller step up
transformers also work well. We had lots of fun with these back in the
60's. The newer shielded cables used in many cable tv installations
will again limit the disruption.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Gentle Reader:

My father has hearing loss resulting from combat artillery.

His hearing is 80% up to 5K Hz then drops off very sharply
and remains low for the remainder of audio frequencies.

He wants a radio with broadcast AM/FM and SW.

I was thinking the sony 2010 would be a good choice but I
don't know if it has good enough audio.

$350 is the top of his budget so the 2010 fits.

Portable is not necessary.

It may be best to get a good radio and add some amplified
high quality speakers.

It may be necessary to have an equalizer to match the output
to his particular needs, but then the cost becomes prohibitive.

Any and all suggestions will be appreciated. Especially from
someone who has a similar condition and can relate.

Thank you for your time
Ed Soniat

Austin,

YOur comment re the TS-570D battery puzzles me. I've had mine since October of 1996 (14 months) and I've seen no odd behavior. What are the sysmpoms of a dead Li battery? Does it only show up if you remove the main power supply (which I never do)?

Generally I like the radio; big improvement over my 440S. Internal AT is dynamite plus many of the features. The DSP is very good on CW (NR2), not so good on SSB (lots of aliasing artifacts) -- so I sitll use my outboard NIR12 for SSB.

One thing I do not like is the extensive reliance on menus. Would like a few more knobs to fiddle with: Mike gain, processor gain, etc.

Likely I will be very interested in the new Yaesu all-mode HF thru 440 radio when it is available -- if only to integrate my all-mode 2 and 6 into the HF radio and add 440 and satellite capability. Running out of room to put stuff in my shack!

I have a Hallicrafters short wave receiver, model SX-28 Super Skyrider. This was in storage for about 20 years and worked fine then but not now. I'm trying to find someone that can test the 15 tubes that it has. I would prefer someone in Hawaii but I've called all over, so even if I have to send them to the mainland, that would do. Also if anyone knows what years these were produced? Serial #150171. Does anyone know where I can get a tube tester? When I was a kid they had them in about every super market. There must be a lot of them collecting dust somewhere. Any help would be greatly appreciated.

I am almost entirely ignorant of VHF radio, so will not be offended if told to go away and read a FAQ (point me to the FAQ!) before asking these questions, but here we go anyway.

I wish to set up kit to detect meteors by forward scatter of radio signals.

The basic principle is to get radio-bounces off an over-the-horizon transmitter and either detect them audibly or, via an ADC and serial port, with the pooter. The preferred frequency range is 40 - 80 MHz. Obvious possible transmitters are east-European FM radio stations and VHF TV station audio.

I am told (if I have understood what I have been told correctly) that AM signals will give me a stronger reading than FM, owing to the bandwidth of the FM signal, and that a CW (what *does* CW stand for?) or SSB filter may also enhance it.

Firstly, have I correctly understood what I have been told?

Secondly, is there a suitable kit available for this purpose and, if so, what?

Thirdly, are plans available for building such kit? If so, where? Also, what level of skill would be required to make it? (I have tinkered with electronics and made a few simple devices, but not with RF stuff.)

Could responses please recognise that my level of ignorance is such that I'm not yet aware of just how ignorant I am!

TIA

Cal,

I'm not too sure about the longevity of the battery yet, since I just got my radio about a week ago. But I can tell you that the plastic bag the contained the radio itself was not sealed on mine either. No evidence of tampering or anything like that.... just the normal packaging I believe. From what I can see in the manual, the performance you are getting out of the BP-173 may not be that far off. I thought it was supposed to be on the order of 3 to 3.5 hrs. Not sure what mix of xmit and recv that might include. But you're close. I did notice that once the voltage started to drop, it wasn't long before the radio went dead. One interesting note, I had my radio on and scanning when it went dead. That very evening, my new desktop quick charger came in. In the instructions they said NOT to charge the battery while the radio was turned on, that it would prevent proper charging. After about 2 hrs, my radio still wouldn't come on.... hmmm thought I. Let me check. I connected the radio to the wall charger and bingo, the radio came on immediately. Yes it was ON. OK, so if I didn't have the wall charger, how could I turn the radio off? I guess I could have removed the battery from the HT and put it on the charger by itself and then put it on the HT. Weird, you would think the radio would have turned itself off as the battery died.

Anyway,

Good luck with your new toy,
J.R. Smullen

Cal Kutemeier <ckuter@ix.netcom.com> wrote in article
<67jaf5$bh9@sjx-ixn6.ix.netcom.com>...
> I bought a W32A a week ago and have experienced power problems with the battery pack twice. The first time when the power meter was down to 5V, the red light in the upper left corner of the keypad began to blink and the display flickered on and off. Then the display went completely dead.
>
> I called AES and they suggests that I turn the radio on and allow the battery to drain down. I did this by monitoring one of the weather channels which transmit continuously. I then used the charger which came with the unit and charged the battery for 15 hours as specified in the owners manual.
>
> Once the battery was charged up again, the power meter read 11V when I turned the unit on. I turned off the BEEP function and I turned off one of the two bands to conserve power. I was able to get about 2.5 to 3 hours of listening and about 10 to 15 minutes of transmitting before the radio

started to act up as I described in the first paragraph. This time the power meter read 8V just before it went nuts.
>
> Is this normal for batteries on an HT? Also, when I bought the radio the plastic bag was open and did not contain an ICOM seal on it. I did not think about it when I bought it, but when the spare battery case that I ordered was delivered on Friday, this $35 piece was in a plastic bag that did have an ICOM seal on it. I am surprised that a less expensive piece would be sealed and the actual radio would not be sealed.

I bought a couple of smaal 10 inch square solar panels at a hamfest
recently. they are supposed to produce 18 volts at 230 milliamps. They
produce the desired voltage but produce only a very small current
across a load. In fact they produce about 10 ma across a short
circuit.
Am I doing something wrong or di I get ripped off at the hamfest.
What should I look for next time.

Item #1
Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing
and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great
shape almost like new. Email: n2rif@amsat.org You can try calling
but my phone is usually busy cause Im on the net most of the time.
My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is
assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Item #2
Hello All;
I'm selling used 2mtr 2x11 Element Crossed satellite X-yagi and
70cm 2x19 Element Crossed satellite X-Yagi.
Both are in good cosmetic & working shape. For details Please re:
email: n2rif@amsat.org You can also try calling but my phone is
usually busy... My ph# is 609-386-9382.. I am Asking $155.00 OBO
for both. No CODs All cash offers will be considered
Also since both of these antennas are too large to probably ship.
It is better for anyone within driving distance of my qth to come,
look and consider buying these beams. My qth is Burlington, NJ
about 8 miles N-E of Phila, Pa and 12 miles S-E of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Item #3
Hello All;
I'm selling a "like new - used 9 times" Mirage B 1016G [made
by KLM not by MFJ] Pre-amplified 10w-in 160-170w-out 2mtr
amplifier with all orignal boxes & docs.
Worked the "Sats" with this amp & has super preamp. Reason
for sale is strictly financial. I am asking $270 + shipping OBO.
Sorry No CODs...
Please re: me via email: n2rif@amsat.org Or Packet
N2RIF@K2UL.NJ.USA.NOAM. You can also try
calling but my phone is usally busy. My ph# is 609-386-9382..
Thank you for reading my bulletin. Thomas J or just T.j. -73

A couple of ideas for you ---

Check to make sure the battery saver is enabled. When it's enabled, the battery saver puts the radio in sleep mode after a period of no signal in order to reduce battery drain. The saver periodically wakes up the receiver and if no signal is present, the receiver goes back to sleep. If the saver is not enabled, your battery life on receive, even wtih no signal present, will be shortened. Check the manual to see how to enable battery saver mode.

Also, make sure the you're not leaving the display/keyboard Lamp on continuously.

73, Jim, K5NTX

Greetings all,
can anyone point me to a manufacturer of notch or band-stop filters for
the AM broadcast band. I've got a strong local AM transmitter site
(960Kcs.), which is causing overload to the front-end of my TS-940sat.
The fundamental signal at 960. kcs is approx +25/s9 but I'm hearing
strong harmonic images all the way up thru to 28.4 Mhz.
Understand there are commercial filters available or perhaps plans
somewhere to build a reject filter.
Any help would sure be appreciated.

I have been running the Kenwood TS570S for about two months now and find it to be an excellent piece of equipment, both with regard to ease of operation and signal quality both on transmit and receive. The only criticism I have is the lack of accessory plugs on the rear. After running the TS940S for several years I got used to the idea that one could connect several different modes of operation simultaneously. The TS570S has but one socket, the 13 pin monster.

Hope this helps.....Chris K2OG

1929. FT-847 PRICE CONFIRMATION !

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-22 00:00:00 UTC
From: Austin Powers <Powers@ix.netcom.com>
Message-ID: <349F3012.1632F66@ix.netcom.com>
Source record: 158451

Got it . I went to a Dealer's site in Greece where the FT-847 is legal
to be sold. His price
converted to USA Dollars was about $100 more than the FT-920. The FT-920
is the USA can be bought for $1639 at two Dealers plus shipping.
Remember, this radio needs
the FM board which is an extra $62 plus Am Filter $110 unless you can
live with the
Wide SSB Filter position. So you see the FT-847 will go for about $1750
in six months
when there will be a $100 coupon on it like the FT-920. The prices
always drop about $100 or more on a new radio after it is on the market
for 6 months or more.
The only bad thing about this radio is the Tuner in not included and is
$400 to $500 USA
Dollars. It is an external tuner that sits next to the Radio (model :
FC-20).
Still not a bad deal if you want it all in a box.

Cheers, Austin Powers

I think a lot of folks have a love/hate relationship with MFJ. I think it was Gary Coffman who once observed that MFJ products are good once you realize YOU are responsible for final QA. Once you go through them replacing all the hardware that fell off, resoldering a cold joint or two, and so forth, the equipment usually works pretty well.

Understanding that, I am looking forward to buying one of their 259 analyzers some day and accept that I may need to fix it before it works right. But if I ever need something that absolutely has to work correctly right out of the box, MFJ is the last place I would look for it.

Herwig, I apologize for the bad taste this has probably left in your mouth regarding USA products, but MFJ is rather unique in this respect.

Have a great holiday season and new year!

I have the Alpha Delta DXCC 10-15-20-40-80 without a tuner.
you need a tuner to go from the top to the bottom of the 80 meter band but the other bands are all below 2.5 swr without a tuner.
There are 3 wires seperated by spreaders and the antenna is only 82 feet long. it really performs well since there are wires cut for each band... I have good signal reports from it especially on 75 metres. It has no power restrictions either....Price was $ 119.00

: Note that the cable harness which connects the cans is part of the
: duplexer. You can't just use random interconnect cabling. The harness
: is cut to phased lengths in order to make the combining work properly.

What the length of the coax does is shapes the passband/notch. If the input jumper is 1/4 wavelength (if I remember correctly) then the shape is symetrical. If it is slightly short, then the shape is steepend on one side and more shallow on the other. The same thing happens if it is slightly long - but on the other side of the passband/notch. I forget offhand which does which.

1942. mounting a yeasue 8500 in a cassette bay of toyota landcruiser (fj60)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-22 00:00:00 UTC
From: Ed Soniat <ed@texas.gtri.gatech.edu>
Message-ID: <ghowwgxqvt4.fsf@texas.gtri.gatech.edu>
Source record: 158507

Howdy:

I have a spare bay in my dash for a cassette player.
It doesn't have any hardware just a hard point on either side
with accommodations for 2 screws on one side and 1 on the other.
I cant find any hardware to install it in the bay.

There is no way to use the regular hanging bracket in the space.
I have not been able to find anything at radio shack or best buys.
Fabricating a bracket is going to be a major pain since I have
practically no tools. The hanging bracket will not work well any where
under the dash. I have the remote mounting kit.

Alternative sites are few. Under the driver seat is over the
catalytic converter and gets hot as does under the console.
There is a heater under the right hand seat. Under the rear
seat is used when the back seat is folded. The dash has not good
hard points because of air conditioning duct work.
In the cargo area there is safe space behind body panels but no
ventilation so overheating would be a serious problem. I
don't want it over head.

1943. FS:Roof Tower+ And vhf/uhf X-Yagis

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-22 00:00:00 UTC
From: "n2rif@amsat.org" <n2rif@kwiknet.net>
Message-ID: <01bd0ee9$16755900$f38d56cf@Kwiknet.ppp>
Source record: 158508

Item #1
Hello All;
I am selling 5ft Glen Martin Roof Tower w/ matching thrust bearing
and 9ft heavy duty aircraft aluminum 2" diameter mast. All in great
shape almost like new. Email: n2rif@amsat.org You can try calling
but my phone is usually busy cause Im on the net most of the time.
My ph# is 609-386-9382..
New it cost over $400 for everything. I am asking $290 OBO. It is
assembled. Shipping will probably be a bit hard to re-package. So
anyone who is within driving distance should probably re: My qth
is Burlington, NJ about 5 miles NorthEast of Phila,Pa and 12 miles
South of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

Item #2
Hello All;
I'm selling used 2mtr 2x11 Element Crossed satellite X-yagi and
70cm 2x19 Element Crossed satellite X-Yagi.
Both are in good cosmetic & working shape. For details Please re:
email: n2rif@amsat.org You can also try calling but my phone is
usually busy... My ph# is 609-386-9382.. I am Asking $155.00 OBO
for both. No CODs All cash offers will be considered
Also since both of these antennas are too large to probably ship.
It is better for anyone within driving distance of my qth to come,
look and consider buying these beams. My qth is Burlington, NJ
about 8 miles N-E of Phila, Pa and 12 miles S-E of Trenton, NJ..
Thank you for reading my bulletin. Thomas J or just T.j. -73

1944. Icom PCR-1000 Commands: The List So Far

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-22 00:00:00 UTC
From: jcwren@atlanta.com
Message-ID: <34ab79cb.145042590@nntp.atlanta.com>
Source record: 158509
Cross-posted to: rec.radio.amateur.misc,alt.radio.scanner,rec.radio.amateur.scanner,rec.radio.amateur.equipment

For those of you who want to write your own applications to control the ICOM PCR-1000, here's a little help. This is what I've decoded so far:

Version 1.00
12/21/97
John "Chris" Wren, KD4DTS
jcwren@atlanta.com

Assuming that you've started by turning on power to the radio, the radio comes up at 9600 baud, and continually sends H100<cr><lf>. This indicates the radio is alive, but "off". An application should then send H101<cr><lf> to the radio to turn it on (DTR also needs to be asserted). The radio will then reply with "G00". There may be some action regarding the control lines (RTS, CTS, DSR) here, but I didn't record that. The ICOM application then sends G105, which sets the serial port rate to 38400. At that point, you're ready to rock'n'roll. You'll need to set the volume and squelch before you'll hear anything.

Sending commands to the radio is not time critical. If you have a terminal program connected to the radio, you can do most of this by hand. Note that most commands need to be terminated with a <cr><lf>.

I don't guarantee the accuracy, but I feel pretty good about what's here. There are a couple of commands that I have no idea what they do. Some of the commands allow interrogation of parameters, such as the GE? and GD?. These always return the same value, and may say something about what country the radio is configured for.

I don't see any command that gives away what version of the firmware you have. That would be a nice one to find (of course, there will only ever be one release, because if there was a bug (and Icom *never* ships radios with bugs in the) it would be a feature, and couldn't be changed.

There are a couple of commands that I have at work that I will add to this list. They dump some values that seem to have something to do with the band-scope functions. When I get around to picking those up and checking them out a little further, I'll post a revised list.

There are 4 surface mount resistors in the radio, near the one corner. We replaced these with 4 DIP switches in an attempt to figure

out if the cellular block could be defeated. To date, no success.
There are diode packs on the other side of the processor that might do
something, but the person I borrowed the radio from was paranoid
enough about the change with the resistors. Anyways, I don't have the
results of interrogating any registers with the DIP switches in other
than the default position.

All parameters are hex values, but are sent as ASCII. I.e.
(from the chart below), J40 is the volume register. It requires that
2 bytes follow, which are value to set the volume to. 0x00 is the
lowest volume, and is sent as ASCII-0, ASCII-0, not <0x00><0x00>.
0x7f is the midpoint (in theory. It's non-linear), and is sent as
ASCII-7, ASCII-F.

Power H1xx
00 = off
01 = on
H100 is sent whenever the radio is off

Power Inquiry H1?
returns 00 if off
returns 01 if on

Results G0xx
returns 0x00 if command good
returns 0x01 if command bad (seemingly)

Baud Rate G1xx
00 = 300
01 = 1200
02 = 4800
03 = 9600
04 = 19200
05 = 38400

Signal Meter G3xx
0x00 = off (does not require LF)
0x01 = on
0x02 = numbers sent as binary
0x03 = on, numbers sent as binary

Signal Meter I1?
returns 0x00 - 0xff

Volume J40xx
xx is 0x00 - 0xff

Squelch J41xx
xx is 0x00 - 0xff

IF Shift J43xx
xx is 0x00 - 0xff

AGC J45xx
0x00 = off
0x01 = on

Noise Blanker J46xx
0x00 = off
0x01 = on

Attenuator J47xx
0x00 = off
0x01 = on

VSC J50xx
0x00 = off
0x01 = on

Tone J51xx
0x00 = off
0x01 = on

Frequency K0fffffffffmmFF
fffffffff is frequency
mm is mode
00 = LSB
01 = USB
02 = AM
03 = CW
04 = (possible RTTY? Nothing sets this value)
05 = NFM
06 = WFM
FF is filter
00 = 3K
01 = 6K
02 = 15K
03 = 50K
04 = 230K

Unknown Commands
I0?
I2?
I3?

1946. Kachina thoughts and SPECS

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-22 00:00:00 UTC
From: "Mark R. Holbrook" <markh@silcom.com>
Message-ID: <01bd0eec$713bb110$0a00a8c0@SpeedCat>
Source record: 158511

Hello,

I was going to post some general info about the Kachina having owned it for about 4 days but I noticed a post by Ed Picha N9EP, that says more that I could have. If you missed his text let me know and I'll forward it to you.

I agree with all of Ed's thoughts on the radio. Regarding the lack of FM. I had a TS130 years ago that had FM for 10M. I worked it once. I think it is like everything. To some the lack of FM would be a major setback. To me, I really don't care.

My main reason for selecting this radio over other "computer controllable" radios was that the Kachina radio is trully a box that you connect to your computer. You control everything from the computer. In other "computer control" radios you still have a normal looking radio with dials and buttons all over the place and there were always some things that you could not control via the computer. Best example, audio level, or squelch level. This ment that the radio still had to be near by so you could tweak the volume by hand.

My Kachina is mounted on a shelf in my closet 18 feet away! If I want more volume I either use the mouse or hit the shortcut keys to increase/reduce volume.

The accessory connectors on the back seemed to forget one thing. No key input. At least as far as I can see so far. I have my Kam+ interfaced to the connector but will probably have to jerry-rig some way for the Kam+ to toggle the key line for CW. Normal CW key inputs are in the remote head that fits in your computer. My Kam+ is also sitting about 10 feet away so running a cable back to the remote head seems silly. There are plenty of unused connections on the 25 pin remote connector and Kachina could have easily made one of them a Key line.

I'll post more thoughts soon. One guy asked me for some specs. So here they are right out of the manual.

Frequency coverage:

TX: Ham bands 1.8 to 29.7MHz
RX: 0.1 - 30.0 MHz

Frequency stability: can be calibrated to +/- 10Hz of external standard

Modes: USB, LSB, AM, CW

Power: 13.8 VDC, 25A max TX, 2A max RX

Temp range: -10 to +50 degrees C

Radio dimensions: 12.5 x 11.5 x 4.5 (L x H x W) weight 11.6 lbs

Control head dimensions: 6.8 x 1.75 x 5.85 (L x H x W) weight 0.26 lbs

Reciever:

SSB sensitivity: 0.18 uv (2.4 KHz filter pre-amp on) 0.35 uv (2.4 KHz filter pre-amp off)

AM sensitivity: 0.6 uv (pre-amp on) 1.0 uv (pre-amp off)

Audio power out: >2W into 8 ohms, >4W into 4 ohms

Spurious rejection: >80 db

Image rejection: >80 db

IF rejection: >80 db

3rd-order intercept point: +18 dbm typical @ 20 KHz (pre-amp off)

3rd-order IMD dynamic range: 96 db typical (pre-amp off)

2nd-order intercept point: +49 dbm typical

Blocking dynamic range: 115 db typical @ 20 KHz (pre-amp off), 118 db typicial @ 50 KHz

Audio THD: <5& @ 2 watts into 3 Ohms

Manual Notch depth: > - 50 db

Transmitter:

Output power: SSB: 100W +/- 1 dB into 50 ohms, AM 25 W carrier nominal

Spurious harmonics: < 50 dbc @ 100W into 50 Ohms

Carrier, opposite sideband supression: SSB: < -55 dbc

CW keyer speed: 5-80 WPM adjustable.

1947. Re: pse compare Timewave DSP 9+ vs DSP 599

I also agree that the 9+ is good add on for the money. I use it for RTTY and Pactor and it makes the difference between a contact and another day of frustration. This doesn't really answer what the post was but I do think the Timewave is a good investment.

1954. Mirage B-5016-G 144 Mhz Amplifier - Crap

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-22 00:00:00 UTC
From: Herwig Cuypers <hcuypers@onsi.com>
Message-ID: <67m605$46q$1@donau.aball.de>
Source record: 158519

I had the unfortunate idea to buy a Mirage B-5016-G 144 Mhz amplifier during my last business trip in USA. I must admit that I didn't read the manual when I bought this thing.
Back home I opened the box and started reading the manual. The first instructions told me to open up the amplifier and check the components. That was a pretty good advise, I found 3 loose coils and a lot of bad soldering. Then I had to adjust and align the amplifier. A spectrum analyser is required to do this (of course every ham owns a HP or Tektronix spectrum analyser !!!). After re-engineering this thing I got it more or less working.
It is the worst piece of ham equipment I have ever seen and it is a disgrace that this piece of crap is allowed to bear the label "Made in USA".
Mirage should sell this thing as a kit (for a much lower price) instead of just throwing it together and instructing the user to do a quality check and align it himself.

Hello Ed,

I mounted my 8500 in the "junk tray" under the factory stereo in my 1996 Mercury Villager. I fabricated a "panel assembly" from 1/4" plywood and covered it with black leather, then mounted it with about a 1.5" recess in the "junk tray". This gave me a flat panel that I could screw the remote kit head mount to. When the 8500 is in the mount, it is flush with the other stuff in the dash, and looks like a factory install. The rest of the radio was mounted under the passenger seat using the optional quick release bracket, and all wires are hidden under the carpet.

Hope this helps...

73 and Happy Holidays,

1960. Re: VX-R1 memories

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-22 00:00:00 UTC
From: Rod <rod@rtsars.com>
Message-ID: <01bd0f11$34d9edc0$0e9493d0@default>
Source record: 158525

The memory layout for the VX-1

Group1 Memories 52
BandLimits 20
Home 8

Group1 Memories 142
BandLimits 20
Home 8

SmartSearch 30
Am Broadcast 10
Total 290

The radio can contain both Group1 and Group2 memories at the same time.
They are completely independent of each other.

Its over 4 days...I think 27, 29,30 and 31 December according to the
flyer I picked up at the Veralum Rally. It promised very good prices
for bargain hunters...

According to the news yesterday, high street sales figures for the
December festive period have been disappointing. So retailers are
gearing up for the sales next week (better hide the other half's credit
cards!).

John,
This is real interesting - thanks. It seems the cellular block may be programed by the software. I have a Japanese version of the radio and it is identical in every respect to the US version as far as I can tell and is not blocked from the cellular frequencies when running the Japanese software. However, it would not receive cellular frequencies with the US software until I began swapping some of the Japan version configuration files. It then started receiving cellular and now even with all US version files it receives cellular. It seems the software may program a flash or e2prom when it first runs - it's not clear

Had mine about a week now,loaded up OK, no probs.Works very well on all
bands using correct antennas.So far have a couple of queries that I
might in time sort out,No1 when using a sound card SSTV prog on HF I
cannot fine tune the radio(except by ear)to see the spectrum display to
get a reasonable picture.Each click minimises the SSTV prog.
No2,How do you run a DOS only prog and run the PCR1000 at the
same time? Maybe I'll sort it out in time but I could use some help.
BTW the English radio mags are full of praise for it.

True. But these are oddballs in the Sony or Yaesu lineup. I don't
think they intended it, that's just the way it worked out; perhaps
due to falling in the gray area of sufficient demand to keep making
it but insufficient demand to continue "improving" it.

Rod,

Thank you for this information but I have tried to do this with your companies software and it doesn't work nor is anything mentioned about this feature in your software or the Yaesu instruction book. If we are all missing the 'trick' to accomplish this I'm sure everyone would appreciate your sharing it with us.

Thanks and best regards,

John

The IC-02AT uses tone numbers rather than the frequency.
For example, 12 is 100 Hz. In VFO mode, hold the function
key down and that should display the tone number. I hope
that helps.

Hi, Mike.

Of course all radios depreciate. It's just the rate of depreciation that bothers me. Don't misunderstand, it's not really an obsession or anything. It's just that I like to try new equipment and a higher resale value, such as the Kenwood TS-430 and 440 radios enjoyed, makes it a little easier on the wallet to accomplish.

Happy holidays.

From: Austin Powers <Powers@ix.netcom.com>
Subject: TS570S vs IC756 vs FT920

I stand corrected. The CTCSS is included with the FT-920 plus Digital Voice
Keyer.
These are usually EXTRAS for other brands so I guess it all evens out.
STILL....Charging
for FM is "cheesy". The AM filter is first rate but I suggest you buy it from
INRAD instead of Yaesu.
The scope on the IC-756 is too slow and as QST say"like choppy seas".

Austin Powers

From: cdurand@tri.com
Subject: Extended Receive Standard?

Here is a question? Why don't amateur radio equipment manufacturers
build all their units with extended receive standard? I know some
companies do already, but not all. I know I would like to have extended
receive on a few of my radios and could care less about extended
transmit. I myself see no reason why someone should be able to transmit
on the local cops repeater for any reason. If you have a reason the cops
will give you a radio.

Just a thought, I just finished reading a story about a kid you was
jamming the local police with his handheld and thought he might not have
done it if the option hadn't been so easily obtained.

AFrom: Ed Picha <edpi@mcs.com>=3D0D=3D0ASubject: Ka=3D=0D=0Achina 505DSP- 1=
st impressions (kinda long)=3D0D=3D0A=3D0D=3D0AHey folks...=3D0D=3D0A=3D0D=
=3D=0D=0A=3D0AThere=3D92s been a bit of interest in the Kachina 505DSP on t=
his newsgroup=3D=0D=0A,=3D0D=3D0Aso =3D0D=3D0AI thought I would share my ex=
periences with this rig after =3D=0D=0Aa few weeks=3D0D=3D0Aof playing with=
it. I won=3D92t dwell on the specs or featu=3D=0D=0Ares since they=3D0D=
=3D0Aare fairly well described on the Kachina web page,=3D0D=3D=0D=0A=3D0Ah=
ttp://www.kachina-az.com, and in the full page ads in QST.=3D0D=3D0A=3D0D=
=3D0AO=3D=0D=0Averall, the radio performs well, meets all the specs I have =
been able=3D0D=3D0A=3D=0D=0Ato test, and is a=3D0D=3D0Areal blast to play w=
ith. I have gotten used to the =3D=0D=0Atuning scheme of=3D0D=3D0Ausing a =
mouse to click UP or DOWN on the digit to be =3D=0D=0Achanged, and=3D0D=3D0=
Aalthough it=3D92s hard to get used to at first, it does gro=3D=0D=0Aw on y=

ou. I=3D0D=3D0Ahaven=3D92t experienced any problems due to noise generated=
=3D=0D=0A by the computer=3D0D=3D0Aor monitor.=3D0D=3D0A=3D0D=3D0AI=3D92ve =
controlled the radio wi=3D=0D=0Ath two W95 machines (no-name P100 and IBM=
=3D0D=3D0AThinkpad 760ED laptop) with =3D=0D=0Ano problems. Control is ver=
y real-time,=3D0D=3D0Awith no noticeable lag betwee=3D=0D=0An activating a =
control and hearing the=3D0D=3D0Aeffect in the radio. The user =3D=0D=0Ain=
terface is very intuitive, and it=3D0D=3D0Adoesn=3D92t take long at all to =
get =3D=0D=0Acomfortable using the radio. You can do=3D0D=3D0Amost operatio=
n either with the=3D=0D=0A mouse or with keyboard. If you get lost,=3D0D=
=3D0Athere=3D92s a =3D93cheat sheet=3D=0D=0A=3D94 with most of the major si=
ngle-keystroke=3D0D=3D0Acommands, and there=3D92s al=3D=0D=0Aways the pull-=
down help that goes into more=3D0D=3D0Adetail. You can download a=3D=0D=0A =
demo version of the software that will give=3D0D=3D0Ayou a good feeling for=
ho=3D=0D=0Aw it works from Kachina'a web site.=3D0D=3D0A=3D0D=3D0AI did s=
ome basic bench chec=3D=0D=0Aks, and the radio was well within specs for=3D=
0D=3D0Apower-out and receive sens=3D=0D=0Aitivity. I plan to do more detai=
led tests=3D0D=3D0A(particularly on receiver p=3D=0D=0Aerformance) when I c=
an get the equipment=3D0D=3D0Atogether at work.=3D0D=3D0A=3D0D=3D0A=3D=0D=
=0AI did my own little PA torture tests by running the radio for 24 hours,=
=3D0D=3D=0D=0A=3D0ACW full power out into a dummy load, keyed by a memory k=
eyer in beacon=3D=0D=0A=3D0D=3D0Amode. I also tested continuous duty PA pe=
rformance by keying in CW m=3D=0D=0Aode=3D0D=3D0Acontinuously for 30 minute=
s. In both tests, there was no power ou=3D=0D=0Atput=3D0D=3D0Aslump, and t=
he PA temperature stayed under +50 C.=3D0D=3D0A=3D0D=3D0ALIKE=3D=0D=0AS:=3D=
0D=3D0ADSP-based noise reduction can be very effective! Likewise the auto=
=3D=0D=0Amatic=3D0D=3D0Anotch.=3D0D=3D0A=3D0D=3D0AAbility to tailor transmi=
t audio response is a=3D=0D=0A nice feature. I=3D92ve=3D0D=3D0Agotten many=
unsolicited positive comments on th=3D=0D=0Ae general audio quality,=3D0D=
=3D0Aboth with the speech processor and without.=3D=0D=0A=3D0D=3D0A=3D0D=3D=
0ASpectrum analyzer is useful, and it=3D92s slick to be able to cli=3D=0D=
=0Ack on a=3D0D=3D0Asignal you see in the analyzer window and have the radi=
o autom=3D=0D=0Aagically=3D0D=3D0Atuned to that frequency.=3D0D=3D0A=3D0D=
=3D0AI like the idea of a cali=3D=0D=0Abrated S-meter that is accurate on a=
ll bands. =3D0D=3D0A(I checked...it=3D92s wel=3D=0D=0Al within the claimed =
+/- 5 dB accuracy). It=3D92s also=3D0D=3D0Anice to be able =3D=0D=0Ato con=
figure the S-meter to read in dBm, uV, or S units.=3D0D=3D0A=3D0D=3D0AThere=
a=3D=0D=0Are two antenna ports that you can assign by band, or use one for=
=3D0D=3D0Atrans=3D=0D=0Amit and one for receive. This setup accommodates t=
he typical=3D0D=3D0Ainstalla=3D=0D=0Ation where you have a wire antenna for=
80/40 and a beam for the=3D0D=3D0Ahigher=3D=0D=0A frequency bands=3D0D=3D0=
A=3D0D=3D0AThe squelch operation is neat...there are two m=3D=0D=0Aodes, le=
vel and=3D0D=3D0Asyllabic. With level, you can set the absolute level =3D=
=0D=0Afor squelch=3D0D=3D0Athreshold. With syllabic squelch, the radio loo=
ks for sig=3D=0D=0Anals that have=3D0D=3D0Acharacteristics of voice. In ca=
se you=3D92re wondering w=3D=0D=0Ahat good a squelch=3D0D=3D0Afeature is on=
an HF radio, I use it for scanning of=3D=0D=0A shortwave utility=3D0D=3D0A=
frequencies. Speaking of scanning, it works pretty=3D=0D=0A well too, alth=
ough=3D0D=3D0Athe scan speed could be improved. The minimum =3D93=3D=0D=0A=
dwell time=3D94 is 200 mS,=3D0D=3D0Aso the maximum scan rate is something l=
ike 5 =3D=0D=0Achannels per second. In=3D0D=3D0Aaddition to scanning the 1=

00 programmable cha=3D=0D=0Annels, you can scan a=3D0D=3D0Aprogrammable fre=
quency range.=3D0D=3D0A=3D0D=3D0AThe cho=3D=0D=0Aice of IF filters (Hz):=3D=
0D=3D0A=3D0D=3D0A6000, 3500, 2700, 2400, 2100, 1700, 1000=3D=0D=0A, 500, 20=
0, 100, DATAHI, DATAMED=3D0D=3D0A=3D0D=3D0A is OK, and the filters work we=
=3D=0D=0All. It would have been nice to have=3D0D=3D0Acontinuously variabl=
e filtering l=3D=0D=0Aike some of the external DSP boxes=3D0D=3D0Ahave. Th=
e DATA filters are 500 Hz =3D=0D=0Awide, and have center frequencies of=3D0=
D=3D0A2210 Hz (DATA HI) and 1700 Hz (DA=3D=0D=0ATA MED). Center freqs can =
be moved=3D0D=3D0Ausing IF shift.=3D0D=3D0A=3D0D=3D0AAlmost =3D=0D=0Aeveryt=
hing you could want for interfacing the radio is brought=3D0D=3D0Aout on =
=3D=0D=0Athree accessory connectors. Connectors are provided for=3D0D=3D0A=
audio/PTT/mis=3D=0D=0Ac (DB25), antenna tuner (DB9) and external amplifier=
=3D0D=3D0Acontrol (DB15). =3D=0D=0ANice that they used three different siz=
ed connectors so=3D0D=3D0Athat there=3D92s=3D=0D=0A no way to screw up by p=
lugging the wrong connector in the=3D0D=3D0Awrong jack.=3D=0D=0A=3D0D=3D0A=
=3D0D=3D0ADISLIKES:=3D0D=3D0A=3D0D=3D0AThe =3D93whisper=3D94 fan on the PA=
is notice=3D=0D=0Aably loud and is not=3D0D=3D0Athermostatically controlle=
d. Instead it runs all=3D=0D=0A the time. Fan noise=3D0D=3D0Ais a functio=
n of main supply voltage...at 12 V, =3D=0D=0Ait=3D92s pretty quiet. By=3D0=
D=3D0Athe time you run it at 13.8V, it=3D92s pretty n=3D=0D=0Aoisy.=3D0D=3D=
0A=3D0D=3D0AThere=3D92s no FM mode.=3D0D=3D0A=3D0D=3D0AThere=3D92s no low-l=
evel RF=3D=0D=0A jacks for transverter operation. =3D0D=3D0A=3D0D=3D0AThe m=
anual is light, no discu=3D=0D=0Assion of operation. However, you can get =
a=3D0D=3D0Agood theory of operation s=3D=0D=0Aection from the Kachina web p=
age and Kachina=3D0D=3D0Awill send schematics on r=3D=0D=0Aequest. There is=
currently no service manual=3D0D=3D0Aavailable. By the way, t=3D=0D=0Ahe =
folks at Kachina have been VERY responsive,=3D0D=3D0Aboth by email and by t=
e=3D=0D=0Alephone.=3D0D=3D0A=3D0D=3D0AWhy doesn=3D92t notch, IF shift, and =
noise reduction work=3D=0D=0A in AM mode? Also,=3D0D=3D0Ayou have no choic=
e of filtering in AM....6 KHz is =3D=0D=0Ait, like it or not.=3D0D=3D0A=3D0=
D=3D0AOn CW, you can select right-handed keyer, le=3D=0D=0Aft-handed keyer =
or straight=3D0D=3D0Akey modes. (Nice touch, accommodating pad=3D=0D=0Adle=
s wired any which way!)=3D0D=3D0AWhen you select straight key and use an ex=
t=3D=0D=0Aernal keyer, it appears that=3D0D=3D0Athe self-completing featur=
e of the keyer=3D=0D=0A is still active. If you have=3D0D=3D0Athe external=
keyer set to a speed that =3D=0D=0Ais FASTER than the speed set on=3D0D=3D=
0Athe internal keyer, the radio does not=3D=0D=0A follow the external keyin=
g very=3D0D=3D0Awell. The simple workaround is to se=3D=0D=0At the interna=
l keyer speed to max=3D0D=3D0A(80WPM) when using an external keyer=3D=0D=0A=
.=3D0D=3D0A=3D0D=3D0AI can=3D92t find a way to generate a continuous TUNE s=
ignal shor=3D=0D=0At of=3D0D=3D0Aplugging a good old straight key into the =
jack.=3D0D=3D0A=3D0D=3D0AAntenn=3D=0D=0Aa tuner is not very robust...not mu=
ch range of z match, and it=3D0D=3D0Awould =3D=0D=0Abe nice if it could wo=
rk outside the ham bands. To be fair, they=3D0D=3D0Aadver=3D=0D=0Atise it t=
o be used with VSWRs of 3:1 or less. Looks like it will be=3D0D=3D0Aea=3D=
=0D=0Asy to interface homebrewed autotuners.=3D0D=3D0AYou may as well skip =
the $239 f=3D=0D=0Aor the internal tuner and cobble up your=3D0D=3D0Aown. =
By the way, the interna=3D=0D=0Al tuner is currently sold as a=3D0D=3D0Ause=
r-installed option by AES. It goes =3D=0D=0Ain very easily.=3D0D=3D0A=3D0D=
=3D0AThe control software is not smart enough to dete=3D=0D=0Act minimized =

previous=3D0D=3D0Aversions. If you run more than one version of th=3D=0D=0A=
e control software, the=3D0D=3D0Aoperation becomes very unstable.=3D0D=3D0A=
=3D0D=3D0AA =3D=0D=0Arelay was used for TR switching...solid-state switchin=
g would have=3D0D=3D0Abee=3D=0D=0An nice. The relay makes QSK a bit clumsy =
and noisy, but it does seem=3D0D=3D0At=3D=0D=0Ao work pretty well (with lim=
ited testing) up to about 30 WPM.=3D0D=3D0A=3D0D=3D0AAn=3D=0D=0Ayway, that=
=3D92s my initial take on the 505DSP. So far I like it and I=3D92m=3D=0D=
=0A=3D0D=3D0Aglad I bought it. If you have any specific questions, I=3D92d=
be glad =3D=0D=0Ato=3D0D=3D0Atry and answer them.=3D0D=3D0A73...=3D0D=3D0A=

00 GMT=0D=0AFrom: ylshih@alumni.caltech.edu (Yin Lung Shih)=0D=0ASubject: I=
com IC-756A???=0D=0A=0D=0AIn article <349A898E.B879A9E9@jnlk.com>, Cregger =
<ecregger@jnlk.com> wrote:=0D=0A>For instance, take the IC-706, please (pa=
h-rump-pump!). The design should never have gone=0D=0A>into production. The=
Mk II should have been the original IC-706. There are no quantum=0D=0A>lea=
p, hi-tech improvements incorporated in the Mk. II. Just plain old common s=
ense changes=0D=0A>that should have been incorporated from the very beginni=
ng. Inadvertantly (I hope), Icom=0D=0A>has disenfranchised many owners of t=
he original 706 by seriously eroding the resale value=0D=0A>of the unit wit=
h the introduction of the Mk. II. Most hams that I know are not rich, and=
=0D=0A>many depend on a good resale value of an existing rig to help financ=
e the purchase of the=0D=0A>latest and greatest equipment. That is how I op=
erate.=0D=0A=0D=0AI disagree with this premise. If a radio design is "defe=
ctive",=0D=0Athat requires some correction by the manufacturer because ther=
e=0D=0Ais an actual or implied warranty that the unit meets specs or=0D=0Aa=
ccepted performance standards. If the difference is features,=0D=0Athen I =
would say that a buyer makes the decision *at the time=0D=0Aof purchase* th=
at the price of the radio equals or exceeds the=0D=0Abenefits he expects to=
get. This expectation may or may not,=0D=0Adepending on whether the buyer=
is a short or long term buyer,=0D=0Ainclude a guess on resale value based =
on the history of the=0D=0Amanufacturer. =0D=0A=0D=0ANo one can predict th=
e future with accuracy. ICOM was not=0D=0Aobligated to produce a 706MkII a=
nd probably wouldn't have if=0D=0Athe 706 had been poorly received. Becaus=
e it was well received,=0D=0Athey went back and said "how can we make it ev=
en better". I=0D=0Awould say that the early purchasers of the 706 got the =
radio=0D=0Athey thought they were buying, else it wouldn't have been=0D=0Ap=
opular. The later purchasers of the 706MkII also got the=0D=0Aradio they w=
anted, and it may even have been the specific=0D=0Achanges in the MkII that=
induced the later purchasers to buy=0D=0Ait rather than the first version.=
It seems to me that everyone=0D=0Agot what they thought they were buying.=
=0D=0A=0D=0AWe know now that an initial introduction of a 706MkII would=0D=
=0Ahave been successful, but Icom didn't know then. Raising the=0D=0Acost =

of product design in an environment that demands that an=0D=0Ainitial desig=
n be "perfect" and "lasting" can only reduce the=0D=0Anumber of new designs=
attempted. The original 706 might never=0D=0Ahave been introduced at all,=
to be later improved, under these=0D=0Aconditions. Are we better or worse=
off then?=0D=0A=0D=0AI would also point out that the companies that do spe=
cialize=0D=0Ain "perfect" and "lasting" designs, two examples being Porsche=
=0D=0Acars or Hasselblad cameras, do tend to have high resale value.=0D=0AB=
ut they also have extremely high initial prices. This doesn't=0D=0Abenefit=
the price-conscious consumer.=0D=0A=0D=0AI understand the raw feeling you =
get when you paid good=0D=0Amoney for something that is dropped in price 12=
months=0D=0Alater or is revised for an increase in benfit. But you=0D=0Ah=
ave to recognize that you also had the unit for 12 months=0D=0Aof use. Loo=
k at personal computers. Everyone knows that=0D=0Athe hot machine of today=
is the mass market machine of=0D=0Anext Christmas and the inventory closeo=
ut of the following=0D=0Asummer. When you go to buy, you just have to fact=
or that in=0D=0Aand decide whether the benefit is worth the price *today*.=
=0D=0A=0D=0AYin Shih, N9YS=0D=0Aylshih@alumni.caltech.edu=0D=0A=0D=0A------=

hat does a spark gap generator actually do? when i was in high school a whi=
le=0D=0Aback, the electronics teacher showed us a box the size of a large r=
emote=0D=0Acontrol. it was called a "spark gap generator". he said that he =
would go into=0D=0Abars on monday nights during a football game. he'd sit d=
own at the bar and when=0D=0Aa big play would come up, he would flick the s=
witch and blank the picture out=0D=0Aon the t.v. of course the bar would er=
upt! he also said that students who=0D=0Amaintained a certain gpa would be =
instructed on how to make one for themselves.=0D=0Ai was transferred to ano=
ther school shortly after this one class. i have always=0D=0Awondered how t=
hese things were made and what makes it create such ferocious=0D=0Astatic. =
i doubt that is legal, so please dont get into trouble by posting=0D=0Ainst=
ructions on this newsgroup. i am mostly just interested in how it does what=
=0D=0Ait does. you can e-mail me privately if you wish. thanks for clearing=
up a=0D=0Amystery!=0D=0A=0D=0A =

=0ASubject: Extended Receive Standard?=0D=0A=0D=0AHere is a question? Why =
don't amateur radio equipment manufacturers=0D=0Abuild all their units with=
extended receive standard? I know some=0D=0Acompanies do already, but not=
all. I know I would like to have extended=0D=0Areceive on a few of my rad=
ios and could care less about extended=0D=0Atransmit. I myself see no reas=
on why someone should be able to transmit=0D=0Aon the local cops repeater f=
or any reason. If you have a reason the cops=0D=0Awill give you a radio.=0D=
=0A=0D=0AJust a thought, I just finished reading a story about a kid you wa=
s=0D=0Ajamming the local police with his handheld and thought he might not =
have=0D=0Adone it if the option hadn't been so easily obtained.=0D=0A=0D=0A=

Achina 505DSP- 1=3D=0D=0Ast impressions (kinda long)=3D3D0D=3D3D0A=3D3D0D=
=3D3D0AHey folks...=3D3D0D=3D3D0A=3D3D0D=3D=0D=0A=3D3D=3D0D=3D0A=3D3D0ATher=
e=3D3D92s been a bit of interest in the Kachina 505DSP on t=3D=0D=0Ahis new=
sgroup=3D3D=3D0D=3D0A,=3D3D0D=3D3D0Aso =3D3D0D=3D3D0AI thought I would shar=
e my ex=3D=0D=0Aperiences with this rig after =3D3D=3D0D=3D0Aa few weeks=3D=
3D0D=3D3D0Aof playing with=3D=0D=0A it. I won=3D3D92t dwell on the specs o=
r featu=3D3D=3D0D=3D0Ares since they=3D3D0D=3D=0D=0A=3D3D0Aare fairly well =
described on the Kachina web page,=3D3D0D=3D3D=3D0D=3D0A=3D3D0Ah=3D=0D=0Att=
p://www.kachina-az.com, and in the full page ads in QST.=3D3D0D=3D3D0A=3D3D=
0D=3D=0D=0A=3D3D0AO=3D3D=3D0D=3D0Averall, the radio performs well, meets al=
l the specs I have =3D=0D=0Abeen able=3D3D0D=3D3D0A=3D3D=3D0D=3D0Ato test, =
and is a=3D3D0D=3D3D0Areal blast to play w=3D=0D=0Aith. I have gotten used=
to the =3D3D=3D0D=3D0Atuning scheme of=3D3D0D=3D3D0Ausing a =3D=0D=0Amouse=
to click UP or DOWN on the digit to be =3D3D=3D0D=3D0Achanged, and=3D3D0D=
=3D3D0=3D=0D=0AAalthough it=3D3D92s hard to get used to at first, it does g=
ro=3D3D=3D0D=3D0Aw on y=3D=0D=0Aou. I=3D3D0D=3D3D0Ahaven=3D3D92t experienc=
ed any problems due to noise generated=3D=0D=0A=3D3D=3D0D=3D0A by the compu=
ter=3D3D0D=3D3D0Aor monitor.=3D3D0D=3D3D0A=3D3D0D=3D3D0AI=3D3D92ve =3D=0D=
=0Acontrolled the radio wi=3D3D=3D0D=3D0Ath two W95 machines (no-name P100 =
and IBM=3D=0D=0A=3D3D0D=3D3D0AThinkpad 760ED laptop) with =3D3D=3D0D=3D0Ano=
problems. Control is ver=3D=0D=0Ay real-time,=3D3D0D=3D3D0Awith no notice=
able lag betwee=3D3D=3D0D=3D0An activating a =3D=0D=0Acontrol and hearing t=
he=3D3D0D=3D3D0Aeffect in the radio. The user =3D3D=3D0D=3D0Ain=3D=0D=0Ate=
rface is very intuitive, and it=3D3D0D=3D3D0Adoesn=3D3D92t take long at all=
to =3D=0D=0Aget =3D3D=3D0D=3D0Acomfortable using the radio. You can do=3D3=
D0D=3D3D0Amost operatio=3D=0D=0An either with the=3D3D=3D0D=3D0A mouse or w=
ith keyboard. If you get lost,=3D3D0D=3D=0D=0A=3D3D0Athere=3D3D92s a =3D3D=
93cheat sheet=3D3D=3D0D=3D0A=3D3D94 with most of the major si=3D=0D=0Angle-=
keystroke=3D3D0D=3D3D0Acommands, and there=3D3D92s al=3D3D=3D0D=3D0Aways th=
e pull-=3D=0D=0Adown help that goes into more=3D3D0D=3D3D0Adetail. You can =
download a=3D3D=3D0D=3D0A =3D=0D=0Ademo version of the software that will g=
ive=3D3D0D=3D3D0Ayou a good feeling for=3D=0D=0A ho=3D3D=3D0D=3D0Aw it work=
s from Kachina'a web site.=3D3D0D=3D3D0A=3D3D0D=3D3D0AI did s=3D=0D=0Aome =
basic bench chec=3D3D=3D0D=3D0Aks, and the radio was well within specs for=
=3D3D=3D=0D=0A0D=3D3D0Apower-out and receive sens=3D3D=3D0D=3D0Aitivity. I=
plan to do more detai=3D=0D=0Aled tests=3D3D0D=3D3D0A(particularly on rece=
iver p=3D3D=3D0D=3D0Aerformance) when I c=3D=0D=0Aan get the equipment=3D3D=
0D=3D3D0Atogether at work.=3D3D0D=3D3D0A=3D3D0D=3D3D0A=3D3D=3D0D=3D=0D=0A=

=3D0AI did my own little PA torture tests by running the radio for 24 hours=
,=3D=0D=0A=3D3D0D=3D3D=3D0D=3D0A=3D3D0ACW full power out into a dummy load,=
keyed by a memory k=3D=0D=0Aeyer in beacon=3D3D=3D0D=3D0A=3D3D0D=3D3D0Amod=
e. I also tested continuous duty PA pe=3D=0D=0Arformance by keying in CW m=
=3D3D=3D0D=3D0Aode=3D3D0D=3D3D0Acontinuously for 30 minute=3D=0D=0As. In b=
oth tests, there was no power ou=3D3D=3D0D=3D0Atput=3D3D0D=3D3D0Aslump, and=
t=3D=0D=0Ahe PA temperature stayed under +50 C.=3D3D0D=3D3D0A=3D3D0D=3D3D0=
ALIKE=3D3D=3D0D=3D0AS:=3D3D=3D=0D=0A0D=3D3D0ADSP-based noise reduction can =
be very effective! Likewise the auto=3D=0D=0A=3D3D=3D0D=3D0Amatic=3D3D0D=
=3D3D0Anotch.=3D3D0D=3D3D0A=3D3D0D=3D3D0AAbility to tailor transmi=3D=0D=0A=
t audio response is a=3D3D=3D0D=3D0A nice feature. I=3D3D92ve=3D3D0D=3D3D0=
Agotten many=3D=0D=0A unsolicited positive comments on th=3D3D=3D0D=3D0Ae g=
eneral audio quality,=3D3D0D=3D=0D=0A=3D3D0Aboth with the speech processor =
and without.=3D3D=3D0D=3D0A=3D3D0D=3D3D0A=3D3D0D=3D3D=3D=0D=0A0ASpectrum an=
alyzer is useful, and it=3D3D92s slick to be able to cli=3D3D=3D0D=3D=0D=0A=
=3D0Ack on a=3D3D0D=3D3D0Asignal you see in the analyzer window and have th=
e radi=3D=0D=0Ao autom=3D3D=3D0D=3D0Aagically=3D3D0D=3D3D0Atuned to that fr=
equency.=3D3D0D=3D3D0A=3D3D0D=3D=0D=0A=3D3D0AI like the idea of a cali=3D3D=
=3D0D=3D0Abrated S-meter that is accurate on a=3D=0D=0All bands. =3D3D0D=3D=
3D0A(I checked...it=3D3D92s wel=3D3D=3D0D=3D0Al within the claimed =3D=0D=
=0A+/- 5 dB accuracy). It=3D3D92s also=3D3D0D=3D3D0Anice to be able =3D3D=
=3D0D=3D0Ato con=3D=0D=0Afigure the S-meter to read in dBm, uV, or S units.=
=3D3D0D=3D3D0A=3D3D0D=3D3D0AThere=3D=0D=0A a=3D3D=3D0D=3D0Are two antenna p=
orts that you can assign by band, or use one for=3D=0D=0A=3D3D0D=3D3D0Atran=
s=3D3D=3D0D=3D0Amit and one for receive. This setup accommodates t=3D=0D=
=0Ahe typical=3D3D0D=3D3D0Ainstalla=3D3D=3D0D=3D0Ation where you have a wir=
e antenna for=3D=0D=0A 80/40 and a beam for the=3D3D0D=3D3D0Ahigher=3D3D=3D=
0D=3D0A frequency bands=3D3D0D=3D3D0=3D=0D=0AA=3D3D0D=3D3D0AThe squelch ope=
ration is neat...there are two m=3D3D=3D0D=3D0Aodes, le=3D=0D=0Avel and=3D3=
D0D=3D3D0Asyllabic. With level, you can set the absolute level =3D3D=3D=0D=
=0A=3D0D=3D0Afor squelch=3D3D0D=3D3D0Athreshold. With syllabic squelch, th=
e radio loo=3D=0D=0Aks for sig=3D3D=3D0D=3D0Anals that have=3D3D0D=3D3D0Ach=
aracteristics of voice. In ca=3D=0D=0Ase you=3D3D92re wondering w=3D3D=3D0=
D=3D0Ahat good a squelch=3D3D0D=3D3D0Afeature is on=3D=0D=0A an HF radio, I=
use it for scanning of=3D3D=3D0D=3D0A shortwave utility=3D3D0D=3D3D0A=3D=
=0D=0Afrequencies. Speaking of scanning, it works pretty=3D3D=3D0D=3D0A we=
ll too, alth=3D=0D=0Aough=3D3D0D=3D3D0Athe scan speed could be improved. T=
he minimum =3D3D93=3D3D=3D0D=3D0A=3D=0D=0Adwell time=3D3D94 is 200 mS,=3D3D=
0D=3D3D0Aso the maximum scan rate is something l=3D=0D=0Aike 5 =3D3D=3D0D=
=3D0Achannels per second. In=3D3D0D=3D3D0Aaddition to scanning the 1=3D=0D=
=0A00 programmable cha=3D3D=3D0D=3D0Annels, you can scan a=3D3D0D=3D3D0Apro=
grammable fre=3D=0D=0Aquency range.=3D3D0D=3D3D0A=3D3D0D=3D3D0AThe cho=3D3D=
=3D0D=3D0Aice of IF filters (Hz):=3D3D=3D=0D=0A0D=3D3D0A=3D3D0D=3D3D0A6000,=

Two examples of lasting radio designs that come to my mind are the Sony ICF2010 shortwave reciever and the Yaesu FT697 MKII 6 meter multimode transciever,

Both have been on the market for years and are still apparently quite popular.

My landlord won't allow me to put up a pair of dipoles for HF so
I've decided that until I can move I'll put up a vertical multi-band
antenna. If I can find a good used one, I'll take it, if anyone with
experience with this type of antenna would like to offer some
words of wisdom I'll listen.....I always like to learn from other
people's mistakes and/or experience.
Please feel free to name brands and distributors with your
comments. If you have one of these to sell and it can be broken
down into a shippable size box please send the details of your
offer via e-mail.

Thanks,
Bill

Source record: 158589

In my opinion. every DSP on the market is completely worthless at removing noise in a radio signal. All you get is a kind of bubbly sound with a little noise reduction. Don't spend money on something which is only good for removing heterodynes and bandpass filtering. I've been there, done that.
Merry Xmas.

I think you got ripped off. If you have a good amp meter and only read 10ma
on short circuit IN BRIGHT SUNLIGHT with panel straight on to sun, then the
panel has a problem. Be sure you are not getting dilute sunlight through high
cirrus clouds or something.

I use an earpiece mic for biking on a regular basis. It works
great. I use velcro to attach the PTT/volume control to the
handle bars. Reports of sound quality are good. The earpiece
is not annoying, even inside my helmet. However, the only drawback
is that people will think that you are talking to yourself.

Excellent condition Yaesu FT-767GX with the 2 meter module installed.
This rig does not have a scratch and looks new. Comes with the Original
box, manuals, mic, dust cover and cables. Will provide a 7 day return
privalige if the radio does not meet the condition as described.

For $1150

I believe this to be one of the best 767s around at this price. The rig
is super clean!

If interested call 703-406-3158(w) or email N4FXP@EROLS.COM.

Thanks for your time,

Mike
From Northern VA

Would prefer someone local..

>73's Matt
>N7XPI

Did THIS interface box work with THIS transceiver as a PAIR on a 486?
Is the SAME CABLE also being used? Is the ONLY new component the
computer or are you adding/changing several things at once?

If the TS-440S is also new to the equation, it may not have the data-
enabling chipset installed (if it is like the Kenwood R-5000
receiver).

If the cable is different, it may not be wired correctly. If a
25-pin-to-9-pin adapter has to be used to adapt the cable it may not
be providing the proper pin translation (there are different types
available).

My only experience has been with an R-5000 and it just FELL together
and worked first time with Win 95 on a 486. I used the KENTROL
program and it auto-configured the port on first set-up.

Check all your system resources in the System part of the control
panel. You may have a conflict on the IRQ you THINK is assigned to
your serial port.

I have for sale a FT-890 HF-rig with built in ant tuner.
Covers 10 thru 160 meters with gen coverage rcvr.
I am the orignal owner (non smoker) This rig is total mint
it also has the latest diode modification installed in it for the
reciever.This makes a much more quiet reciever and cuts down the
QRN greatly.It was sent back to yeasu to have this done.Everything in
excelent working condition. $895.00 Supplied with orignal stock mic
manual,and boxes. This transciever has all the bells and whistles.

Phone 215-535-0912 e-mail richar@earthlink.net

Thank you, Rich K3PIQ.

2024. SX-101A Modification ID Help

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-23 00:00:00 UTC
From: searay270@juno.com
Message-ID: <882931450.568131598@dejanews.com>
Source record: 158416
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

I just came upon a nice looking SX-101A with two modifications.:

7-pin 6DC6 RF amp replaced with a 9-pin 6EH7 or 6EJ7 mounted in a sunken ceramic socket after surgery. Tube is only a guess based upon my Drake 4-line experience.

7-pin 6C4 added as an amplifier in series with 2nd mixer and notch filter.

Does anyone know if these were common mods, or have any documentation such as from QST, 73, CQ, etc?

Any help or recollection would be appreciated.

Thanks for reading.

Jack W3RU

> Ray

A "tuning gang" refers to the variable tuning capacitor's plates.
One set of plates (or "fins") are stationary, and the other set are
moveable (with the tuning knob). When the gang is closed, all the
plates are aligned side-by-side. Open, they are not.

I noticed your warning message. I have also seen it on other
messages.
My question, when you receive unsolicited, traditional, mail, do you
also through that away?

My dad reads his junk mail and he has gotten good discounts from the
various hamburger places, etc. I know that junk mail isn't most
people favourite thing but, I hate to admit this, it can serve a
positive purpose.

Hi Fellas;
I have for sale:
What I believe to be a Filter for a kenwood. Its marked YF455DE Has a <nok>
for a logo on top.
Its a plug in type with two retaining screws. It was in a box marked KENWOOD
SSB filter, YG-455S-1, 455.0khz.
I think that this was the original filter that came with the radio, whichever
that was and was replaced by the filter in the box. Anyway, it is from an
estate sale and I would like to sell it for $50 shipped conus. It looks new but
was probably not used for long before it was removed!
Thanks es 73..........RICH RLUCCH2098@aol.com

Although I agree with you that Yaesu is misleading in it's advertisements, Here is my thoughts on how they probably come to atleast 290 memories(I actually come up with more ?):

Memories in Group 1 52
Memories in group 2 142
Speacial memories for AM Broadcast 20 Ten per Group
Smart Search Memories 62 Thirty one per
Group
VFO's Per band in 2 groups 16
HOme memories per band in 2 groups 16
band limit memories per group x 2 40

Total ---------- 348

? Go figure

What are your thoughts and coments ?

Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment,alt.radio.scanner

If anyone out there in net-land is in a position to test a version of TRUNKER.EXE that supports the Icom R7000, please let me know. You'll need a radio to monitor the control channel, a slicer, and a R7000. I'll need to know what baud rate you have your R7000 set up for. It *will* have to be at the default address of 0x08 (unless you have more than one of these, you probably never had a reason to change it). I would prefer someone who has experience with monitoring trunking systems.

Please don't expect a reply until sometime mid-morning if you can reply. Please note that this may take a couple of iterations to get right, also.

Do you people just not read, or get to a point in the sentence that you disagree with and stop there. Did I say anything in that above sentance about all of ham radio being CB without code? No. I specificly asked if anyone had listened to two meters lately. Damn, I wish people would think before they clicked the "reply" button.

rgds,
Scott

I stopped listening to repeaters when I heard (obviously a married couple) continually use the repeater as there "private" radio channel. Now, I am not talking about dirty sex talk, but they got just a little too suyrpie on that channel for me.
I have been talking on simplex 146.52 for several years now. Rarely do I ever tune in a local repeater. Aside from the local lovebirds, it is very hard to get someone to talk on the local machines. It is like "if you are not a member of the club, we don't talk". Had a very interesting conversation with a gentleman this afternoon on 52 about TV UHF transmitters (I am a chief of a local U here in town). We estimated that we were about 40 miles apart. There are also two major intestates running through here, so folks looking for local info tend to call out on 52 since they don't know the local repeaters here.

rgds,
Scott

I love older tube gear. I would much rather have a tube in the PA than solid state any day. Soon as I can figure out how to reuse one of my old retired klystrons out of my TV transmitter, I am gonna have a kickin' liner!! <VBG>

Another ham here in town is trying to get Kenwood's Computer Controlled interface to work. The rigs a TS-440S with the IF-232C interface. Apparently the interface used to work with a 486 running DOS. We are now trying to get it to work on a Pentium 100 running WIN95, with no luck. I have checked everything I can think of. The RS-232 cable to the interface appears to be fine. We tried several different Control programs both in DOS and WIN95 with no luck. I have checked Com port, IRQ, baud rate, parity and everything else I can think of. It would appear that the problem is somewhere between the IF-232 and the rig. Any suggestions?????? Anyone know how to check the IF232 and the RIG for proper operation in this area????? Thank You for your time.

If Radio Shack Sells HF Rigs, I am sure there are more people around
in HFs.

Why ?

Because many of us started in VHF by visiting Radio Shack and saw some
VHF rigs !! Or at least we start to get into VHF by using their
excellent (?) rigs !!

If they sell the HF rigs in their showcase, I am sure a lot more
people show the interest and actually use the HFs.

I don't think it's profitable for Radio Shack as not many people
purchase the HF rigs compared to VHF and such, but I am sure it's a
good starting point for advertising amateur HF !!

Not be able to buy a radio nearby is a bad idea... say if you
can't purchase your computer in your area and if you have to mail
order it... then I am sure we have fewer people who use the computer +
the internet nowadays...

Now... where should I take this suggestion to ?? Newsgroups ??

There's a quirky review of the T2A in the November CQ VHF. The review
is very positive, but does not address the radio's features in detail.
Most notably it neglects to review the PC software programming options
at all.

The software programming of the radio makes it easy to set up a radio
for a trip, then return it to a prior configuration when you're back.
This is especially nice if you have multiple radios, as we do.

At the moment, AES has the T2A for $159.95, and the programming
software is free for a few more days. We like the radio enough to have
purchased four of them. I would recommend replacing the duck with a
gain duck for better range.

There is an issue with the transmit audio on the T2A which has been
exhaustively addressed here a few months ago. Search Deja News or
email me for more info. The postings also give general reviews of the
radios.

Why not start out with Radio Shack. Simple logic, Masa... If you want a company to sell something, suggest it to them! Radio Shack is owned by the Tandy Corporation in Texas. They have a web site which can be found with a search engine, but knowing your resistance to research, try http://www.tandy.com/

Also, suggest it to your local Radio Shack stores... If there is enough demand the product will be produced. It's a simple matter of supply and demand. The way the economy works.

>any info would be a big help

Hello Ian,

I have tried this so-called dipole on 2 or 3 occasions, because I hate
to see something so well made and using such high quality parts just
sitting in a bag in my barn. However, not having a steel tower or
mast upon which to hang it (that's what is was designed for) it has
never performed well for me. I can always get better performance from
a c.f. zepp or a simple dipole.

Note that the post from KJ5XI is relative to a different antenna.
However, his comment about needing a tuner relevant.

We seem to be missing the big picture. Although you can eventually come up with a total number of memories, the group 2 memories (the largest bunch of them) are almost useless in that they do not allow you to store many "needed" parameters that group 1 allows. If you want to use your group 2 memories as a scanner with carrier squelch receive only, then you got what you wanted. If, like me, you wanted to use the VX as a "two-way" radio, with all the ADVERTISED features, like the "1 watt with supplied adapter", then you didn't get what was advertised.

2073. Yaesu FT747 with Mobile Kit

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-23 00:00:00 UTC
From: Craig Severson <cas@csi.com>
Message-ID: <OpbT707D9GA.293@nih2naab.prod2.compuserve.com>
Source record: 158497

I will be selling a Yaesu Ft747 transceiver with the Mobile kit shortly; this is the unit where the front panel is detachable and connected to the RF deck via a cable. 100W, SSB/CW, LCD readout, 160-10M, general coverage receive.

What should the "blue book" price of this unit be if in good condition?

Thanks.....Craig/W8CS

2074. Trade computer equip. for older CW or CW/SSB transeiver

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-23 00:00:00 UTC
From: hcripe@sprintmail.com
Message-ID: <34a1ed72.9820512@nntp.a001.sprintmail.com>
Source record: 158498

I am looking for an older inexpensive tranceiver for my 8 yr old son
to start working CW on. I have various computer equipment to trade:

2 hard drives (240meg, 320meg)
2 dot matrix printers (one wide carriage)
Near new daisy wheel printer
PC with 386 DX/40 motherboard
800x600 VGA monitor
SCSI 2x CD drive
Colorado 250meg tape trive (internal)
Misc i/o cards, cables, etc.

Email with description of equipment and what you would need to trade
(or sell, if inexpensive).

Thanks,

Howard Cripe
WB5YES (Kansas City area)

From: mtatko@lewiston.com
Message-ID: <67or80$1nb$1@news.fsr.net>
Source record: 158499

Looking for a remote unit (analog) for broadcasts of sporting events.
Been using a Zercom MaxZ-II which I like. Would like equipment of my own.
Also in need of two headsets (have been using Telex).
Would like to buy used instead of brand new from dealer.
If you know of anyone who sells these items or if you know of an online or
other magazine that advertises such, please respond here or via email to
me directly at:
mtatko@lmtribune.com

Thanks

Hello Jim,

Boy, that's a reach - running 1500 watts with a Kenwood 870. Wouldn't
you have a better chance with a linear amplifier?

All joking aside, the MFJ-989C is my choice. I also have an old
SA-2060 from Heathkit, a Murch AT-2000A, and an old MFJ-989 (without
the "C") and they all do the job except that the Murch won't cover 160
Meters. One problem that I find with all of these tuners is the poor
performance at 10 - 12 Meters. The roller inductor is getting down to
the last few turns on those bands and I wonder about how well they
work at such high frequencies. Frankly, if I were working 10 or 12 M
with High power, I would think about getting a tuner that is optimized
for those bands - perhaps by modifying the inductor. Rough job!

Unfortunately, I have no experience with the Ameritron ATR-1500, but
here are some questions you need to resolve. Is there a roller
inductor in the ATR-1500 (there is no mention of one in their ad's and
it doesn't look like it from the pictures of the front panel)? A
tuner without a roller inductor isn't worth the powder to blow it to
hell. Why would you compare a tuner rated at 3KW with a tuner rated at
1500 watts (and less on 160M)? I suspect that the ATR-1500 is a well
built tuner - perhaps having even higher quality than its MFJ brothers
and sisters, but you need to consider all of these issues.

Actually, even though PT's comments above are all true so far as they
go, the word "gang" in this context refers to the fact that more than
one variable capacitors are "ganged" together on one shaft in order
that two or more tuned circuits can be tuned together or "track" with
one another.

The answer as to what is meant by Open and Closed is quite correct.
We also use the term "fully meshed" in reference to a variable
capacitor to mean that it is tuned to its maximum capacitance (closed,
if you like).

>I would like to know if a vertical antenna for 80m will do a good job.

Hello Mr. Slime,

I have a rather unusual 80M vertical that seems to work quite well.

I start with a "high rope" for supporting it, which starts high in a tree and goes out horizontally at a shallow angle to a far distant tree. This gives me a "sky hook" at about 40' from which to hang the vertical antenna. The antenna itself is top loaded with both a coil and a top hat. The top hat is a 12' long wire crossing the top of the vertical in a "Tee" fashion. (It is inserted into the "high" rope in series, so to speak..) Then from the center of that top hat there is a small coil, wound on PVC pipe, with about 10 turns of wire at about 1" dia. All of this is by guess and by gosh - whatever it took to get the impedance at the base of the vertical to be non-reactive. From the coil hangs the vertical itself.

At the base the coax shield connects to two ground rods driven in 4' and to that is connected the 8 tuned counterpoise wires. They stand a foot or two above ground and go to PVC pipes stuck in the ground as supports at 1/4 wavelength out radially. The base of the vertical connects directly to the center conductor of the coax which is about 100' to the shack. I feed it with a tuner and run 1500 watts. I have done A/B comparison tests against an inverted vee at 40' and find that the vertical is comparable. It gives as good a report on 80 M in QSO's as does the inverted vee in many cases. In other cases it's gets reports of about 1 S unit less than the inverted vee. It seems to depend on the direction, the skip conditions at the time, the distance to the other station, etc. In other words, you pays your money and you takes your choice - Hi.

Just a thought. I have a couple of programs here which use the serial port on my Pentium machine which will work only if I boot up from scratch in Command Line Only mode. CTRL-ALT-DEL won't do. It is necessary to use the reset button or sequence the power.

I don't know why this is so, but I imagine that there is something about the way that the Serial Port is being initialized. I wrote one of the programs myself, but I borrowed the serial port code from somewhere. It looks good to me, and I never had this problem before I started using WIN95. WIN95 seems to leave the serial port in some strange condition. I intend to look into it someday when I feel that I have a lot more time.

To get into Command Line Only mode, press F8 IMMEDIATELY after the message "Starting Windows 95" appears on the screen following hardware reset or power on. A memu will appear. Choose item 6.

Good Luck!

For Sale

GE Master II radios 144 to 160 Mhz.

Some have PL encode/decode 100.0/146.2

50 Watt transmit .5 uv or better receive. (ALL WILL BE CHECKED BEFORE

THEY LEAVE HERE THERE WILL BE NO DUDS).

Some may come tuned in the ham band as I have done this to a few to make

shure they work well there.

Currently on Goverment frequencies but tune to 2 meter ham verry easy.

Each package contains:

One radio.

One control cable.

One control head 8 channel.

One microphone.

One speaker.

One transmit/One recive ICOM without crystals.

One PL incode/decode board and hook switch as available.

If you buy 5 or more (limit 25 as that is all I have) you

will receive a compleat service manual.

The cost is 75 dollars plus shipping FIRM!

Crystals can be installed for one frequency tx/rx for 40 dollars.

You are responsible for any additional ICOMs and crystals as there

are not enough to do more. If you order the one channel installed

you must wait 4 to 6 weeks for me to order the crystals from my supplier

and them to ship them to me. The time can be shorter but the

supplier raises the price to me and I to you.

If you want to order your own crystals and install them your self

you can order them for 10 dollars each (20 dollars a pair 1 tx / 1 rx)

from:

Hy-Q International

1438 Cox Ave.

Erlanger KY. 41018

606-283-5000

COD or money orders only no credit.

DO NOT buy JAN or BOMAR crystals as they are shipped off frequency

and usualy fail within 6 months.

Any repeater mods you want are up to you to do.

All orders and shipping are to be handled through Rich KA8CMK at Big_Red_One@Juno.com

way he want's to do it.

Thank you for your time

Wayne L. Anderson

e-mails !!

I have an inverted-l which is a wire 135 ft. long. It's described in the arrl antenna book. I have it coming directly from the wire connection on my mfj tuner. It goes up to a nail in the floor joist in my basement cieling, over to the cinder block wall, and out through holes drilled through the block. Put the wire through a hole by itself, not with any other feed lines! It then goes up to an insulator which is hanging from the base of my 2m/440 diamond antenna, which puts the insulator at about 30 feet. The wire then goes horizontal to another insulator which is supported by a 1" pipe braced up by my garage at the property line. I use poly line from the pipe to the insulator. This thing works very well from 40 through 160 meters.

If you're gonna run more than 100 watts on it, feed it to the outside with coax, and keep it away from all objects with some kind of insulators. It WILL arc if it crosses a ground!!!!. I found this out when tuning up with my sb220 amp. It arced to my keyer which the wire was laying across, and also to the shield of a coax that it was crossing. Pretty scary stuff.

It's very good for us guys who dont have towers or big real estate.

Good luck and Happy Holidays...
Mike...

My friends in Africa are thinking about purchasing a radio/radio-mail system. They are whithout communication currently(no phone, no radio).

They were recommended two systems (from two sources). One recommended a PACTOR2 system(SCS) with a good hf tranceiver. The other recommended a Barrett 923 system (i can't find find very much info/specs on this one, and it seems very costly) which is supposed to be a CLOVER system.

Which setup is best ? Please consider pricing, quality and whether the protocols (pactor2,clover) are available to reach in Africa ? Secure places to call could be few.

I am a novice in radio land, please help!

Thanks all.

Watch for Dentron tuners for sale here on the swap lists. They're still pretty common. Get one with a tapped inductor. (no lossy, dirt collecting roller hardware) Mine works great on all bands and is much wider banded than my mfj. Try a WTB msg here.

You need to put your amp meter in series with the
charger leads while hooked up to the battery. Now,
put different value resistors in series till you get the
current to about 60 milliamps. When you find the
value resistor to use, replace it with a 1w resistor
to keep the heat to a minimum. You now have a
trickle charger with a 16 hour charge time. This is
the same as the commercial wall-cube chargers.

You can call FCC directly to find out application status. The number is
1-888-225-5322, and you will have to go through a couple of menu options,
but when you get to amateur license lookup you will be asked for your zip
code and date of birth, and from that the automated system will do a lookup
and then report status of your application.

Almost every radio which allows you to manually adjust output power
suffers from this same malady. Output power is adjusted via the ALC
servo loop. The manual control introduces a bias to this loop (same
as if an amplifier supplied an ALC voltage to the connector in the back).
The servo then lowers power until the power out monitor level (from the
PA board) matches this bias. There is a finite settling time required for
this to occur. While the loop is settling, a full power spike is generated.

This can cause problems with some solid state amps (tube amps
generally don't care), and of course spews a bit of garbage on the
band at every key down. Now since virtually every radio with adjustable
power output does this, the IC-706 is not unique in this respect. But
using this method of power control is not a good idea with any radio,
if for no other reason than the garbage it causes to be spewed on the
band.

For AFSK operation, the better way to control output power is to leave
the manual power control set to maximum and decrease the mic
gain control instead. This works just fine (remember to turn off the
speech compressor when running AFSK).

For QRP CW operation, the better way is to use a power attenuator
on the radio output (though with the keying waveform deficiencies
of the 706 series, you're unlikely to want the 706 for CW operation
anyway).

For SSB voice, don't use manual output level control. You'll get a
spike with every syllable. Run the radio at the full output setting
and back off the mic gain instead, or use a power attenuator
between the radio and amp if you like to overdrive the compressor.
Make sure you don't drive the amp so hard it generates an ALC
voltage, or you're back to square one. Best yet, use an amp that
requires 100 watts of drive, then you don't have to worry about
this at all.

Note: the original IC-706 didn't have the cleanest PA in the world, so driving an amplifier with it is not a very good idea anyway. The Mk II has a cleaner PA, and can be used to drive an amp without causing too much spatter (if you don't overdrive the amp). Go light on the speech compression anyway so that you'll sound less like you have a mouth full of mush.

I have had trouble with a lot of peripherals that are not PlugnPlay in W95. I have a dual boot set up between dos 7 and w95, and if I want to run hamcomm or jvfax I reboot into dos7. This prevents w95 from configuring the port for some other hardware. I do this rather than go through the headache of manually configuring com1, my only serial port, under w95. i messed up a lot of stuff trying to do that.

Source record: 158339

It is my recollection that the 201 was our gift from the criminals on 11m, and the FCC's inability to do anything about them. Therefore, 10m was deleted from ham amps because apparently too many of them found themselves in illegal use.

happy holidays all,
my vectronics vc-300d tuner arced this morning while i had it switched direct to my antenna (not through the tuner section) and now i can only get about 70 watts out of my 430. i usually get 110-120w. the antenna i was using is a trap dipole but my highest swr on 40m is 1.5:1. with the carrier gain set to 12 oclock i should get 100w, but i am only getting 7-10w. if i turn it all the way up i get about 70w. it doesn't sound like the transistor problem i have read about. any suggestions? is there a place i can send the radio that will service it fast (i go back to school on 1/13)? btw, the tuner arced while i was calling cq on 7.245. please post replies or send them to zootv@erols.com thanks
mike

Hi. WB0NRU here. Your SW recvr has set still for 20 years and therefore
almost certainly had crystallized electrolytic capacitors.

Ask around about how to reform E-lytics. If you tried to turn the thing
on without the proper proceedures, though, it is probably too late for
these caps.

At any rate I would look there before I started spending money to send
tubes all over.

Good luck.

Hi.

I would like to know if a vertical antenna for 80m will do a good job.

thanks.

The latest QST has a review that notes that the output power "spikes" when keyed and this may cause damage to an attached amp.

PLL trimmer capacitors are going bad. A common problem with an IC761. Go to www.icomamerica.com and check their service FAQ's.

Dick,

The label "Made in USA" means to most of the European Hams: Drake,Collins,
Kantronics, PacCom, Ten-Tec, etc... quality. Mirage is misleading their
customers. If the user needs to align a particular piece of equipment
himself, thereby needing very special equipment such as a spectrum analyzer,
this should be clearly indicated on the box and in the advertisements.

But, I still believe in US quality. I am pretty sure that Mirage is just an
exception. Anyway, I lost an illusion and gained some experience.

I wish you and yours a great holiday season and a happy new year as well.

Best 73

>
>The S2001 is a sort of tube in the middle between a 6146A and a 6146B.
>A 6146B is a good substitute.

S2001As are a Japanese equivalent to a 6146. These tubes are used in the TS-520( ), 530S, 820( ), and 830( ) with a 12BY7A as a driver. Good robust setup. The best substitutes are 6146Bs or 6146Ws. '46Ws are the mil psec version... tougher and about as efficient.

hi chris, first, Merry X-mas and HNY I do have a TS440 and let me
tell you, it doesn't have such a port, but you can use the main coupling
with the power and mod reduced to zero and with a 500Ohm dummy load in
the transverter; that will stop the txcvr to deliver more than 8W, even
with the power knob totally clockwise. Nic, YO3GNO

Hi.

I bought an antenna tuner (MFJ-949E... it was on sale) and this one
seems to take a random length of wire as an antenna.

If you know something about it, please let me know. I am operating
80m.

What I am told concerning this is that RAdio shack cannot compete in the HF market. It costs too much to have a company make their radio's and they would have to go to a competitor to have them do that for them (ie. Icom).

My Manual says there are two chip sockets that are mounted behind front
face of the radio.needs those IC chips to make computer control
possiable
,part numbers for chip are in the manual.

Good luck

Liner? You must mean linear!

In any case, if you fellers want some GREAT ARTICLES with diagrams and
schematics on how to build your own tube transmitters etc.,
I have a BUNCH of them on the web, and I have lists of places that can
supply you the parts you need.

I also am scanning in some more articles this week and will add them
soon. So whether you want to run AM, CW, SSB or whatever, take a look
and BUILD THAT RADIO NOW!! (grin!)

Hello Steve and Matt,

Here's another thought which expands slightly on what Steve said.

If the COM port that you are using on ANY PC shares its IRQ with a
mouse, you're in trouble. For example, if your mouse is on COM1, and
you are trying to use the RS-232 interface unit on COM3, then you're
in trouble because the IRQ for COM1 and COM3 are normally shared.

Get into your Windows 95 Control Panel and take a real good look at
the resources used by each and every COM port on the system. You may
find a problem that did not exist on the old 486. This whole problem
of not having dedicated IRQ's for every possible device on the system
has been the bane of PC's ever since Intel developed the x86 family.
If you can put the interface on a COM port that does not have anything
connected on its mate, you have a better chance of making it work.
(Mates are 1 & 3, and 2&4).

Hi,
I have back issues of QST, Ham Radio, Monitoring Times, Satellite Times,
73, Worldradio, Popular Communications, Radio Electronics, Electronics Now,
and CQ for sale.

E-mail with your wants

Thanks
Fred

Source record: 158352

hello i wondered if anyone had experienced an dead fm-tx on a ic706

rx-fm works fine but no power or response on tx at all.
it should have worked ok 6 month ago, and wore stored until now,
and now the fm-tx is dead

any tip or help in anyway wold be nice

from Ronny
e-mail ronny.ruud@hm.telia.no

>to ship me >items
>they really didn't have in stock)

I have had decent service from FMJ and from Ramsey. Parts suppliers Ocean State and Mouser have also been pretty good to me. Other than that I really dont mailorder much stuff... oh I forgot I bought a TS-50S from Radio City and I got it right away but that was a couple of years ago.

basically, I think mailordering is a calculated risk, balancing, on the one hand, low price and claimed availability, and on the other hand the risk of getting jerked around. good idea to reduce the risk by using a credit card. Even safer to get your local ham store to order it first, then buy it. (They might want a deposit on a big icket item)

If dealing through the mail were not risky, then the mailorder merchants would not insist on us paying before we see the merchandise. They want us to trust them, but basically they dont trust us.

I have bought stuff before from the outfits above, and I will doubtless do it again, but I know I am gonna get yanked around sooner or later: it's a fact of life.

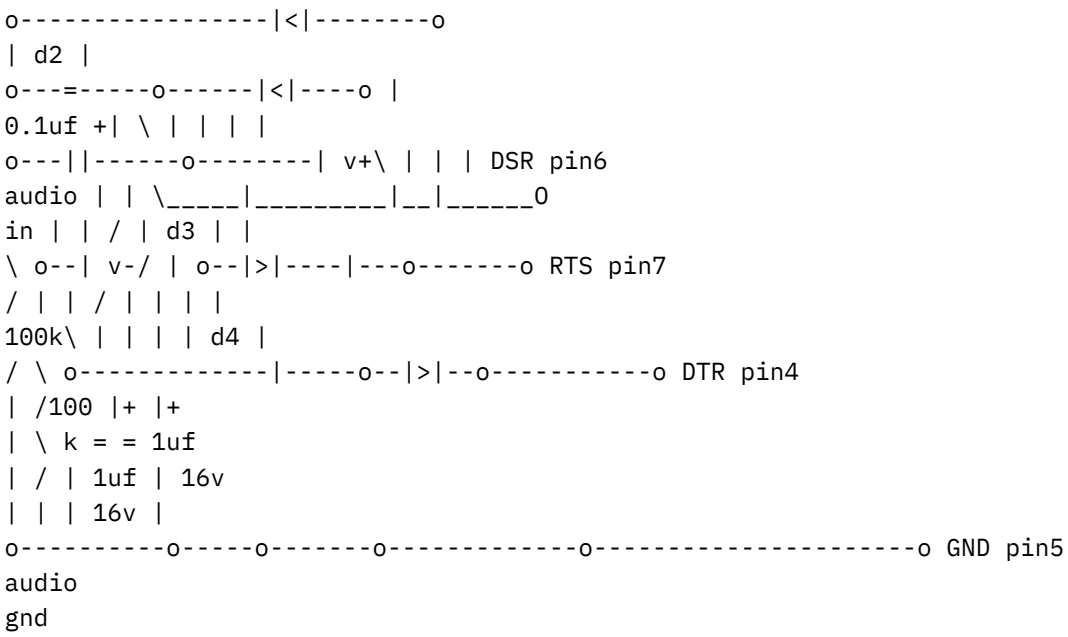
I would
>like to know how to build a converter for receiving weatherfax and
other kind
>of information.

The HAMCOMM program pretty much sets the standard for rrrrrreally basic
hardware for copying HF Fax, RTTY, AMTOR/SITOR/NAVTEX, ASCII, and CW... did I
forget to mention SSTV. The circuit can also transmit with a couple more
components. The interface works with JVFAX, HAMCOMM, HFFAX, PCTELEX, and many
other similar programs. These programs rely on your computer to do all the
work... all the hardware does is convert the signal back and forth between
levels usable by your serial port and your rig. HAMCOMM has excellent tech
notes on building the interface, which has only 17 components as I build it,
unless I want to use it to send CW which adds about five more parts.



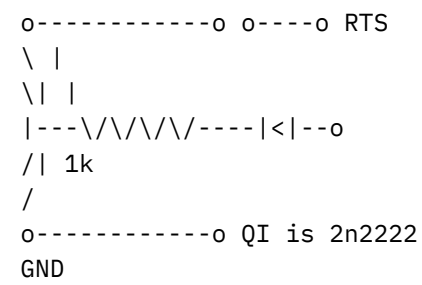
As I recall, this is how the recieve circuit goes. diodes can be IN4148
C1 is ceramic disk and the value is noncritical
infact, nothing is critical except C2 and C3 should be installed
with the correct polarity. they are electrolytics. can substitute tantalums i
guess cause I have.

Notice that the diodes form a rectifier.

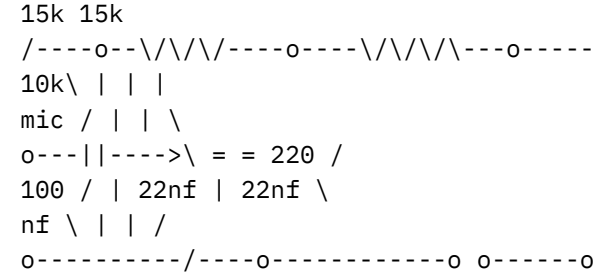
U1 can be a 741, but I prefer half of a TLO82, available at radio shack. It is low noise, and the tlo81 is hard to find. this part is a low noise op amp. pinouts are on the package... but anyway..
sig out, the point of the symbol, is pin 1 on the IC
V+ is pin 8
V- is pin 4
input+ is pin 2
input- is pin 3
and thats it.

for best results, make the cable between the unit and your serial port as short as possible. commercial units are built right inside a d-sub hood. On the Kenwood rigs, the mic pin that the manual calls TXD is audio to be transmitted, i.e. audio input to the transmitter. RXD is audio recieved by the receiver, and it is this pin that you should use for the audio in signal to the converter. This is more elegant than plugging into the headphone jack, since this way you can still hear the receiver and tune by ear.

For keying the PTT line on a solid state rig where grounding the line enables TX, just drop down with a diode, a 1k resistor, and a transistor from the RTS terminal of the serial port, thusly:



Nothing to it. You can take audio for transmit from the PC speaker, or you can filter and attenuate the output from the serial port TXD, pin3. HAMCOMM doc suggests the following circuit:



CW keying is a bit more involved. The unit so far will copy CW sent by machine or a very good operator. Keying your rig's sidetone with your straight key and watching how well or poorly HAMCOMM copies it is good practice for developing a nice clean fist.

RTS is always negative in recieve mode
RTS is positive in transmit mode
DTR is always npositive in recieve mode
DTR is positive in Transmit mode for CW KEY DOWN or RTTY SPACE
DTR is negative in Transmit mode for CW KEY UP or for RTTY MARK

it therefore follows that at least two transistors will be needed, one to test for RTS negative or positive, and then if RTS is Positive, another one to test for DTR Negative or Positive. I an reluctant to suggest to others that they use my circuit because one of these days keyline RF will fry my UART. You might want to use relays or opto-isolators. If you use transistors, use little bitty ones like 2n2222 or some other light switching or small signal transistor, and mount them in sockets. Those little fellers are cheap enough to use for "RF fuses", and sockets enable changing a burnt out one even in the middle of a QSO. Do use diodes for reverse polarity protection, both of the serial port and the keying transistors, and use a current limiting resistor of at least 1k to start with. Your rigs keying characteristics might be different than mine.

Maybe in another post I will describe a simple CW interface for thee SUPERMORSE program that I use sometimes when I'm not using a real key.

Anyway, download JVFAX and HAMCOMM. Those will get you started with this interface. Try building only the receive portion first, get it working, and then try the transmit circuit. It works in transmit for JVFAX, too, for all the fax modes and SSTV too.

You will have best luck running the programs in DOS. W3.1 does not like those programs at all, and W95 usually has the serial port configured for some piece of PlugnPlay hardware, and it is a pain to manually re-configure.

ENJOY! 73 evrbdy

Dead on all bands? Are you on 2 meters and just not seeing
output on the meter because its 10 watts?

Did you try a reset?

A very nice radio - had mine for about a year. Kenwood now has a polarized display helps with direct sunlight. Price is less than $475 for new at HRO. Works superb as to intermod. I drive Rte 128 in Boston and only hear what you'd expect - despite RF alley. Nice to have duplexer built in so can use just 1 antenna. True dual receive. Like alpha-numeric display. I use E-Z Clone for loading freqs and alpha data - painless! I wish it was a tri-bander and gave us 6 meters!

ER1 means the rig sees a problem with the backup battery option memory. To re-set: turn off rig, hold down the F+D keys while turning it back on. If this happens a lot have the battery replaced by radio shack.

I have one of the first FT-1000MP's. I have spoken to the factory and they will update/"improve" its circuitry to current level of manufacture.

Is this worth doing?

What does it really improve.?

Please reply via e-mail as i may not check back into this NG for a while.

Many thanks and Happy holidays,
Rick - N4RW

I slid on a freshly charged battery pack onto my HTX-202 and turned the powr knob, but no go. The Ext. pwr. jack works, but not the battery. Tested the battery and it gives 8.4V. What's up? My guess is a blown diode near the battery contacts somewhere; anyone have similar problem? Thnx. Matt Annen KB9OIV

Merry Christmas from KB8UYZ!

I hope that all of you have a Merry Christmas and Happy New Year! I think we are going to over here. We added several new rigs to the shack this Christmas, including the new Alinco DJ-S11 VHF Transceiver ... that fits very nicely in the shirt pocket, with room to spare!

From what I have seen of the radio so far, it is fantastic, and has a lot of nice features for a radio as small as it is. It requires only 3 AA batteries, and costs only $88.00 from Tech America! (http://www.techam.com).

We are also very pleased to report that the new server, MEGAMAN.DHCOM.COM, is now online and fully operational! We will be using it as the main server for all of the DHC/KB8UYZ web sites, and will also use it to unveil our new service ... free amateur radio web sites.

Each free amateur site will be considered our Basic Web Service, and will include 5-MB of free space, FTP access, email forwarding, unlimited usage/unlimited hits, access to our Java directory, access to a whole CD-ROM of clipart and background images, and much more! If you would like more information on this service, please reply to this email message.

If you haven't visited KB8UYZ.COM in a while, stop by! (http://kb8uyz.com). Our current feature at the site is the new KB8UYZ Amateur Radio Newswire, brining you the latest amateur news and information weekly.

>bandwidth
>settings?
>

Definitely go for the 500hz IF filter, Audio stage filtering is great, if you already have decent IF filtering, but go for IF first. Cut down on all the crap going through the IF amps and Audio stages. You will probably see improved weak-signal performance compared to what you get with a wide IF, especially if in both cases you are also using an outboard filter. An added bonus with the crystal filter... it is internal, and it is always hooked up and ready for use. Once it is in, it is in and that's that.

Now... once you have your 500hz filter installed, THEN think about audio filtering. DSP is great! You can really get wild & funky with the new technology. Most ready-built units have one or more notch filters, some even automatic, that will grab that pesky heterodyne and choke it dead dead dead. Bandwidth and center frequency are so adjustable it boggles the mind. I imagine by now there is even a unit out there that will follow a moderately drifty signal, or even "fix" a chirpy recieved signal. You can play these doodads like a trombone, but they really shine when they have a good IF filter watching the front door.

DSP in the IF is the really new technology to watch for. It is already implemented on some high-end transcievers, but this is just baby's first steps. IF stage DSP could truly replace crystal filtering. This is just the beginning... watch for real voodoo magic from DSP in the next 5 years or so, as faster chips come out. Next on MY dream list.. a DSP driven continuously variable pre-selector!

There are other alternatives to DSP in audio filters. The ARRL handbook, W1FB's books, and many other references contain simple designs for active filters built from cheap op-amp chips. My favorite chip is the TLO82, which is a fairly lownoise chip. There are TWO op amps onboard this chip, and if you are careful, you can use them both in cascade. You gotta keep the signal down to a modest level, though, since it is really really really really hard to isolate the stages. Pinouts are on the back of the package if you buy the chips from Radio Shack. (I admit that availability is one reason I like em)

You can build variable bandwidth filters, or variable center frequency filters using the op amp approach, and you should be able to build a complete 4-stage unit for under 20 bucks even if you don't HAVE a junkbox.

Beware of designing op amp filters with very narrow fixed bandwidth... it is very hard to get them down under 200 hz without a lot of ringing. A filter with a lot of ring will drive you up a wall!

There are other active approaches to audio filters, and there are still plenty of hams using passive LC audio filters. They work, but I prefer the op amp approach, since I can't afford DSP. I use a 4 stage unit for CW on my TS-50S and I also have the 500hz IF filter. I notice a real difference between 500hz and 2.4khz even using the audio filter. I also see a big difference with the audio filter on or off, even on the 500hz IF. One is not a substitute for the other... they are complementary

A word on narrow-band technique: carefully tune signals to the center of the passband. If an annoying signal is very close by, tune your chosen signal toward the edge of the passband with your RIT, and "brush off" the offending QRM as much a possible. You can also use the IF SHIFT control if your rig has one. If you use your main tuning knob, you also change your TX freq, which is annoying to the other op. Duh, I know.. sounds obvious, but even experienced ops tend to forget this sometimes. I have chases a few up or down the band myself.

Another word on narrow-band technique... Listen to the frequency first before transmitting, right? remember that from HAM 101? Well, don't forget to open up your recieved bandwidth when you are scouting around for a clear freq or a CQ call. Once you are on your chosen freq found by LISTENING, THEN set your narrow filters. Other stations close by on the dial might not have such nice filtering as you do. They might not be annoying you at all, but you could still be driving them up a wall. So when you LISTEN FIRST, open your ears wide.

>
> Mike kb9qhu

Mike,

Essentially what goes here is this: the SB-200/201 units are the same except for the fact that the '201 does not cover the 10m band due to the FCC rule change regarding amplifiers around '78.

The same is true for the SB-220/221 series of amps.

For an excellent reference of all the Heathkit amateur radio products, I highly recommend the book "HEATHKIT A Guide to the Amateur Radio Products" by Chuck Penson. There's a picture of nearly every kit offered by Heath that had to do with Ham Radio, and good descriptions of the gear and it's operating characteristics (including pros and cons). I know JWO Services has them available. The URL for JWO is: http://www.jwoservices.com/

Hope this helps,

2191. RE: the "Person" selling the Yaesu 920

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-25 00:00:00 UTC
From: N4WFK <n4wfk@erols.com>
Message-ID: <01bd118b$a0780b30$c23daccf@dad>
Source record: 158392

You guys might want to steer clear of the guy from area code (815) who is selling the Yaesu 920 here on the newsgroup. About a year and a half ago, he was selling an 850 for $1000. We agreed over the phone to have him ship it to me C.O.D. Well, after not receiving it I placed many phone calls to him, most of which were not answered or returned. I was told that the rig had been shipped from a particular third party shipping store. I located the store and the manager confirmed that this was not true. Still, when I could get him on the phone I was assured that it was in transit. The rig never arrived, he never seemed surpised or concerned. Then after all this expense (about $20 in long distance phone calls) and effort to get the rig, I gave up disgusted and posted a slam on him to this newsgroup. I honestly don't know why he led me on the wild goose chase but after I told him that I knew he lied about shipping the rig, he would not return my emails or respond to the public message that I posted. After posting the public message, I had at least three persons email me that said they were promised the rig as well and had been jerked around. I told him that if he advertised here again I would post a notice about the incident. Deja news is a good source of recalling details about past newsgroup postings so I did a detailed check before posting this message. Does he have a 920, will he actually ship it? Who could know?

Go to where you can adjust the amount of the offset and using the
frequencies you listed above, tune the dial for 1.0900 MHz offset.
The choose -DUP setting and it will transmit on 145.710 while
receiving on 146.800 Mhz. Now store this into a memory channel and
every time you choose that memory the radio will be automatically set
up regardless of where you set the tunable offset.

I just tried this on my shiny new 2 day old 207H <grin> and while it won't let me use those frequencies (146.8MHz is out of band here in the UK and I haven't done the wideband mod) it will let me set a TX offset of +- up to 20MHz with a resolution of whatever step increment you have set on that band.

I think that means that what you want to do is possible. For more details see page 27 "Repeater operation, offset frequency" of the manual.

Cheers,

Mark.

Please note: my previous "reply to" address was incorrect...

Sorry...

I have an original owner, non smoker, PRISTINE, TS940SAT for sale... The SN is 7100016....It is equipped with the "Banker", which allows front panel access to the memory channels. Also, equipped with an International Radio 500HZ CW filter. The antenna tuner came from the factory. Have the Service Manual. This rig has been used sparingly the last few years. It performs flawlessly. It is electrically and cosmetically in mint condition. Price is $1100 shipped...Thanks and Happy Holidays to all. Lou- N2TU

2199. DTMF DECODER - HELP

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-25 00:00:00 UTC
From: Marco Ricciardi <marco.ricciardi@pobox.com>
Message-ID: <680h10$6p$2@puma.unisys.com.br>
Source record: 158400

Hi.

I would like to decode DTMF tones that are recorded in a cassette tape. I have the decoder software (found in the NET) and a computer but I don't know how build a interface (cable) to connect them. I wonder some decoding software needs only a audio cable connecting a cassette recording to a sound board audio input.

Yes, it's possible. It will be a waveguide filter. Check the Microwave Filter Company
or MA/COM Associates. It's not going to be very big for that frequency, gold plated, and very expensive. Good Luck. Dave.

2205. HELP! Motorola Maxar 80

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-26 00:00:00 UTC
From: twork@pobox.com
Message-ID: <883180406.1379336204@dejanews.com>
Source record: 158209

Two of us just acquired three Motorola Maxar 80 radios,
Model D33TSA1300BK and have been told that they could be used for APRS stations by changing the crystals.�� Has anyone any experience in doing this?

��� 1.��� We need a source for the power plugs.

��� 2.��� Would like to find schematic for the radios

��� 3.��� Would like to find wiring details for wiring up TNC's

��� 4.��� An economical source of crystals for the radios.

��� 5.��� Interested in anyones experience with these radios.

We are hoping to put in 3 digi's in our area using them.......if not as a digi, then as a station..

Need to know of pitfalls, problems, etc...with these radios...

Will appreciate your assistance......Thanks..

Message-ID: <MPG.f0e3fde3c08aea7989691@news.infoave.net>
Source record: 158211

T-60 nice in appearance, has been restored to very nice condition, all tubes good. Meter replaced with incorrect value (125 ohm coil, should be 100 ohm coil) and will not deflect properly because of this. Someone with good manual dexterity can remove turns from the easy-to-disassemble meter movement, and can repair this minor defect easily. Does not hurt the transmit function.

V-44 partially restored, good condition, working but tubes not tested.

This TX will cover 80-6m CW & AM. Includes manuals for both. $85 plus Mailbox & Etc. shipping for both. I want them to arrive in good condition, and although shipping will cost more, you'll be assured of receiving what you paid for in one piece. Will not part out or separate.

Source record: 158255

On Thu, 25 Dec 1997 13:21:05 -0600 annen@execpc.com wrote in
rec.radio.amateur.equipment:

: I slid on a freshly charged battery pack onto my HTX-202 and turned the
: powr knob, but no go. The Ext. pwr. jack works, but not the battery.
: Tested the battery and it gives 8.4V. What's up? My guess is a blown
: diode near the battery contacts somewhere; anyone have similar problem?

I have used several HTX-202s and 404s, and have noticed particular
combinations of battery pack and radio sometimes have mechanical
difficulties, so the contact is lost when the battery pack is wiggled
a bit. Your problem might be just a more serious example of this.

The first thing I would try is to slide the battery off and make sure
all the screws holding the sliding contact plates on the battery and
the radio are tight. I'd also check that the spring-loaded + contact
on the radio and the screw it connects to on the battery are not
tarnished.

On the rig that gave me the most problems with this I ended up bending
the edges of the contact plate very slightly to make the radio and
battery grip each other a little more firmly. Be careful doing this.

To check your hypothesis about a blown diode try connecting the
disconnected battery to the base of the radio with some small
jumper wires.

>K7MH@JUNO.COM. 73.

Since they may be more folks than you with this question I will post
this reply.

Yes I have a HM-77A that I use with my IC-706 MKII I also used it with
the original IC-706 that I sold. It is just about the same as the stock
mike in drive. When I get a new mobile I set it up on my station
monitor. As I recall the original mike wanted a mike level of 8 and the
HM-77A needed a level on 9 for proper SSB modulation.

I thought the Icom price for the mike was way too high so I bought a
IC-281H that had been hooked up backwards (it uses the HM-77A) for less
than the mike alone. As a benifit I fixed the 281 and am making a
pacsat radio out of it.

I am satisfied with its performance both on 2M FM and HF, I can't
recall making a 6M contact with the radio. I hope this amswers your
questions.

Merry Christmas 73 Jerry KK5YY

Source record: 158260

Hello,
I have 3, RCA 2 meter trancievers.
1 is all solid state, the other 2 are solid state except for the
transmiter output section.
these are all simalar, there are two joined sections.
one section has the audio and transmiter amp. and the other section
has the oscilators and if strips.
These look to be mobile radios on 2 meter, crystal operated.
3 conectors on the front, antana, power, consol.
key look in the center of the front.
Size is about, 9" * 5" * 16" deep.

The lables are mostly wore off, but here is one that was readable:
TYPE: CMCA 30J2 T
FCC NO: CT2 30H
SER: H-20452-6

Dose any one know were I mite get some information on these?

Any one knoe what the model # or series # is for these radios ?

Thanks for any help,
Jim Martz,

One more comment that is often overlooked - your typical microwave oven already leaks about 1/2 to 1 watt of RF around all six sides. The general public seems comfortable with the use of microwave ovens for the last two decades, in spite of their leakage (which used to be worse).

Yeah, but not in realtime, IE it isn't a true CAT system. The Kenwood TS790A
may fit the bill, as would the IC821. But I don't think that they do VHF/VHF or
UHF/UHF, just VHF/UHF. Sounds like he wants to build a trunk tracker setup.

NEW??Nice of you to wake up after your extended sleep. CHEAP?? I've seen several items get bid up above, some way above, what they are selling outright for at places like vhamfest, etc. Like most auctions, much is overbid. There is a Hallicrafters S-120 on EBay right now bid up to $82. This is a clunky 4 tube shortwave which typically brings $25 to $45. Wake up Tom.

Anyone who takes the time to learn the code is not lazy. Nor is the no code who has a good electronics back ground and passes the no code technician. The older hams who firmly believe that the no code license is the down fall of ham radio have done little if anything, to help police our hobby to keep it from going to chicken band. Ham radio has a tradition and a fine history of self policing so that we don't loose our priveledges.

As for not opening the case to work on the radios it is becoming fastly impossible to work on these radios with out being nearly a commerical radio license holder, and some very expensive test equipment, and tools. The average ham can barely afford some the radios we are buying let alone try to buy the equipment to build and maintain them.

But like someone said, this is not what this news group is for. So I'll shut off my flame thrower and ask that others stop flaming hams

Mike,

In the Proceedings of Microwave Update 95 on page 173, there are details
for the construction of a waveguide filter with a bandwidth much less
than 1 GHz. On page 141 of the same publication is a cavity filter at
24 GHz with a bandwidth very much less than 1 GHz. WD4MUO has built the
cavity filter and has the plot if its characteristics.

I think you will find that the only acceptable filter will be a
multicavity waveguide filter for the required bandwidth plus reasonably
low insertion loss.I cant locate a paperback book I have from the RSGB
which gives a lot of design data for waveguide cavity filters. Ken

You guys might want to steer clear of the guy from area code (815) who is selling the Yaesu 920 here on the newsgroup. About a year and a half ago, he was selling an 850 for $1000. We agreed over the phone to have him ship it to me C.O.D. Well, after not receiving it I placed many phone calls to him, most of which were not answered or returned. I was told that the rig had been shipped from a particular third party shipping store. I located the store and the manager confirmed that this was not true. Still, when I could get him on the phone I was assured that it was in transit. The rig never arrived, he never seemed surpised or concerned. Then after all this expense (about $20 in long distance phone calls) and effort to get the rig, I gave up disgusted and posted a slam on him to this newsgroup. I honestly don't know why he led me on the wild goose chase but after I told him that I knew he lied about shipping the rig, he would not return my emails or respond to the public message that I posted. After posting the public message, I had at least three persons email me that said they were promised the rig as well and had been jerked around. I told him that if he advertised here again I would post a notice about the incident. Deja news is a good source of recalling details about past newsgroup postings so I did a detailed check before posting this message. Does he have a 920, will he actually ship it? Who could know?

Try using aligator clips, or something similar to power the radio from the battery terminal. If that doesn't work you have either a loose wire to the spring loaded contact, or a bad power relay located at the very top of the circuit board.

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

I use the Gap Titan on 6m and 2m also!... On 2m the swr is 1.2:1 across the band (at antenna, not in shack) and works great. I loose abt half of the power (135' of rg213 to antenna) by the time it gets there and it still hits repeaters better than a 1/4 w ground plane with 15' of cable.

You can (i do) also load the Gap Titan on the upper part of 160m... I run abt 30w with my Kenwd 850 's tuner (abt 4 : 1 swr) and work my East coast net in the am... No Problem!

This rig was sold in Australia for a short time around 1983-84. I
believe that the low power version put out 10w and covered 80-10 metres.
The main attraction of the rig to me is its size - it's a small boxy
radio smaller than the FT7 or the TS120V.

Does anybody on this newsgroup know more about these radios? In
particular how their performance compares with Kenwood/Yaesu and whether
there are any web pages on them.

73,

Hi Dave,

Do you still have the 2010 ? If so, I am interested. What is the external antenna adapter you referred to ? How long have you had the radio and are you the origional owner ? How well does the sync detector work on your unit ? The Passbook says the performance varies greatly from unit to unit. Any major flaws in the unit I should know about ?

Assuming you still have the radio and the sync detector works well, how would you like to do the transaction ?

Cheers and season's greetings,

FTV is a software only package that can be used to receive images from
Weather
Satellites and Terrestrial Facsimile Stations, text transmissions from radio
telex services, Morse code, as well as Amateur Radio FAX, SSTV, RTTY and CW
signals. It can also transmit Amateur Radio FAX and SSTV. No external
hardware, other than a radio, is required, as all the necessary signal
processing is implemented in software.

The main features include:
WEFAX, FAX, SSTV, colour SSTV, RTTY and CW operation.
Transmits 6 FAX modes, 8 monochrome SSTV modes, 10 colour SSTV modes.
FAX operation supports APT signal recognition and scheduled reception.
No external decoder or converter box is required.
Signal analysis is provided on all modes.
Many parameters are adjustable while receiving.
Full recovery from wrong mode settings is possible.
Program works in real time (about 1 second 'DSP' time lag)

I have improved documentation considerably and an illustrated user's manual
is now
available. You may get more information or download a copy from my web site,
on http://www.geocities.com/SiliconValley/2504

2257. Kenwood TH-G71A mod?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-26 00:00:00 UTC
From: tracker557@aol.com
Message-ID: <19971226201901.PAA28234@ladder01.news.aol.com>
Source record: 158293

I am looking for an out of band mod for the Kenwood TH-G71A. I have heard of a mod which involves cutting the green looped wire from the inside bottom of the rig and removing a SMR that is to the left of the one in the white box. However, I do not know what the final RX and TX range of the rig is after the mod. (I do not own yet but am considering purchasing)

If you have any info on this mod or others please feel free to respond.....Is there a software mod out there some where????

Thanks, Tracker

2258. FS: CRT's

Message-ID: <883166405.1017708550@dejanews.com>
Source record: 158295
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Greetings and Happy Holidays. I am looking for a source
for repair parts for an SB-220. Real need at the moment
is the 4.7M 1W resistors in the HV meter circuit. These
drifted due to voltage stress. I have read in a QST that
these should be replaced with 2W spiral film resistors
of the same value. I need only three, any sources???

Thanks,

Lothar

There appears to be a wideband mod, but maybe only in 2 meters
There is a book of mods, but the mod doesn't match my radio.

I'm getting the new mod, and will post when I find out what it
does.

Artsci has the mod.

I see I made an error in explaining the frequency setting
command of the PCR-1000. The correction version of the full command
list will have this corrected, but here's the deal.

I left out the trailing '00' on the command. This is
obviously a parameter of some kind, but I'm not sure what it does.
The control software always seems to send a '00' here, and that works.
I haven't tried other values to see what the impact might be.

Thanks to the folks who found this who tried it, found it
didn't work, and asked me why.

Frequency K0fffffffffmmFFXX
fffffffff is frequency
mm is mode
00 = LSB
01 = USB
02 = AM
03 = CW
04 = (possible RTTY? Nothing sets this value)
05 = NFM
06 = WFM
FF is filter
00 = 3K
01 = 6K
02 = 15K
03 = 50K
04 = 230K
XX is an unknown function but is always '00'
00 = ?

Well, hellzbellz, that clunker POS prob'ly ain't worth the powder to blow it away. Shoot, I'd prob'ly ask ya' for ten bucks just to take it offen yer hands. But, tell ya' what, seein' as how this here's the Christmas holly days, an' I'm feelin' a might gen-u-russ (as well a the Jim Beam), I'll take that puppy from ya' and after it gets here (assumin' you double box it, ship it UPS priority, insured for $1000.00, and you pay the shipping costs), I'll sit right down and write you a personal IOU for fifty...no, make that SEVENTY-FIVE U.S. dollars. Then, assumin' it works real fine for a year or so, I'll sit right down again and send you my check for that 75 U.S. dollars, minus the interest, of course.

Now, you'll prob'ly get lotsa e-mail from other fellas tellin' you that this here radidio is worth seven-fifty, maybe even a thousan' dollars. Don't you believe 'em. They'll tell you that, sure, but will any of 'em send you a personal IOU for that amount. I think not.

Think 'er over and if you decide to take me up on this gen-u-russ offer, be real careful when you pack up that beastie. Any rust or dust it picks up durin' shipment...well, I'll just have to knock off a few bucks from the price.

Happy Holly Days,
Billy Bob Bootleg

Radio Shack has several models available. The newest decodes the
digtal data and displays the message for the county code you preset.
It's about $80 as I recall. Other models go for as little as about $25
on sale.

I have for sale a FT-890 HF-rig with built in ant tuner.
Covers 10 thru 160 meters with gen coverage rcvr.
I am the orignal owner (non smoker) This rig is total mint
it also has the latest diode modification installed in it for the
reciever.This makes a much more quiet reciever and cuts down the
QRN greatly.It was sent back to yeasu to have this done.Everything in
excelent working condition. $895.00 Supplied with orignal stock mic
manual,and boxes. This transciever has all the bells and whistles.

Phone 215-535-0912 e-mail richar@earthlink.net

Thank you, Rich K3PIQ.

> the 1000Hz emergency tone.
>
> Can anyone direct me to a brand and model and perhaps where it
> can be bought?

Simple! Radio Shack. They have a bunch.

"Alert" models start at $30.

If you live in an area with frequent alerts, you may wish to
consider the top-end model with the "SAME" alert feature. "SAME"
is a digital code that is broadcast so that you will only hear
alerts for your area.

Look on page 229 of the `98 catalog, or take a browse to:

http://support.tandy.com/support_audio/3152.htm

Read about the weather radio system directly from the "horses"
mouth:

If it isn't clicking it isn't tuning. It doesn't have motor driven caps
like the previous AT's. It is all relays selecting combinations of
inductance and capacitance as needed..

With an FT-11R it is tough, tedious and slow to program. Now they give us less keys? I don't think so... as I mostly use the small radio for scanning and have many channels, I bought the programming kit at the same time I purchased the radio.

I seriously think there is a problem with the pricing of the programming kit, (almost $40) as you are forced to buy it, especially if you want to use all 296 (??) memories and save a large amount of time.

Can you scan both groups at the same time or are you only able to scan group 1 and if you want to scan group 2 turn the radio off and perform the function to get to group 2. It would be great if there was a way to scan both groups at the same time, but I can almost bet your answer will be no. I will try and work with it to see what it will do until I hear from you. Thanks

REVIEW: R-390/URR - R-390A/URR Handbook, Paolo Viappiana, Editrice Il Rostro

Okay - what am I doing writing a review in English of a book written in Italian? To make matters worse I don't have much knowledge of the language either!

Well, first of all I would like to state that there is enough information taken from the various US Army TM11s, charts, diagrams and figures that know no linguistic boundaries to make the Handbook worthwhile to someone who does not have access to the official documentation. Of course, some degree of familiarity with the language would be a great asset here or a friend who can help.

The fact that a writer in Italy chose to write a book about a forty year-old US military and government radio receiver really intrigued me but it only backs up the claim that these radios are extremely good for listening to the portion of the spectrum they cover - 500 KHz to 32.000 MHz, AM and CW. Add-ons and circuit modifications will also make SSB signals intelligible but since most shortwave broadcasts are AM the receiver is popular among serious hobbyists who like to tinker with their equipment.

The Handbook contains 20 Capitolos (Chapters) and covers a lot of ground; ie: technical data, modifications, history, trivia, statistics, lore and legend about this receiver. Paolo's work covers "la famiglia 390" which includes the R-389, R-390, R-390A, R-391 and R-392 and the differences between them, particularly the R-390, R-390A R-725 and R-1247. It is very convenient to have block diagrams and tube lists of both receivers in one book if you are interested in both models. One of the things it conveys very nicely is that the R_390 and R-390A receivers are VERY different. Paolo has included a detailed chart of contract numbers, contractors, years of manufacture and estimates how many were made in each contract. I am curious how accurate those production figures are, since Tom Marcotte, compiler of the on-line list has not publically speculated in the numbers, at least that I have seen.

As far as illustrations go, Paolo has borrowed liberally from the TMs and these are, of course, in English. There are mention of some of the officially modified models, such as with LSB and SSB, Diode Load output on the front panel and a whole chapter that lists the TM11s and NAVSHIPS manuals for all models and some sources for them. Also included is mention of the Boatanchors List on theporch.com and how to subscribe. There is a ten page bibliography or articles, mostly in English, with familiar and knowledgeable names like Kleronomos, Rippel, Langford that is extremely valuable and this compilation alone is well worth the

price of the book.

I looked in the mods and did not see the very important C-553 mod to change the notorious Vitamin Q plate blocking capacitor on the plate of V501 (1st IF amplifier) to a .01/600V Sprague "Orange Drop" - cheap insurance on your four Collins mechanical filters recommended by Chuck Rippel. In fairness to the author it may be in there somewhere and my ignorance of his language must be forgiven if this is the case.

The book is available directly from the publisher - write them at: Editrice Il Rostro di Patrizio Giovene & C., 20155 Milano, Via Monte Generoso 8 Italy, or Fax: 02-2133869. They will mail you a copy, enclosing an invoice for 35.000 Italian Lire which is about $25.00 US. You must pay in Lire and can get from a bank or currency exchange.

I am hoping that the book will be translated into English one day. However, in my opinion THE R-390/URR HANDBOOK contains enough useful information that it is worth getting if no other detailed sources are available.

I can't answer your problem specifically, but I have loaded v.2.4 on my SCS PTC-II and everything works fine, including CWTerm mode. It is my understanding that the PacComm PTC-IIs have been having problems with the CW mode for some unknown reason - I don't know if your problem is related. One last thought, do you have the newer bios version 1.2? It's on the SCS web page at http://www.scs-ptc.com/index8.html

That is amazing! I just purchased my VX-1R for US$299. Is it legal to have it shipped from a US distributor? It definitely would have been much cheaper, and it is easy to modify to make it operate with Tone Burst and other European standards.

In article <680h10$6p$2@puma.unisys.com.br>, marco.ricciardi@pobox.com
says...
>
>Hi.
>
>I would like to decode DTMF tones that are recorded in a cassette tape.
I
>have the decoder software (found in the NET) and a computer but I don't
know
>how build a interface (cable) to connect them. I wonder some decoding
>software needs only a audio cable connecting a cassette recording to a
sound
>board audio input.

Another factor you need to be concerned about is the quality of the
recorded DTMF tones. If they were recorded by a machine with poor wow
and flutter, then you may not be able to decode them at all.

Source record: 158225

Hi there
Has anyone compared an outboard DSP like the NIR-12 to the
software DSP blaster? I would be curious as to what you find. I have
compared DSP blaster to a DSP-59+ and fine that none of them suits my
purpose, that is to remove noise on 80 meters SSB. I know that all DSP's are
good for CW but am not interested in that mode. Has anyone compared the
NIR-12 to a DSP-59+ ? Did you find the NIR-12 much better than the DSP-59+?
How about built in DSP's on some hf rigs, are they any better than an
outboard DSP? What I don't like is the signal deterioration on SSB when
removing noise, you get a kind of bubbly sound.Thanks for any advice.

I have read the 39 page owner's manual, inspected the IC-T2A; & have
concluded that it cannot be powered by DC. Have you figured out how to
use the Tone Scan (T Scan), or the (T Call) functions listed on pages
25 & 18, respectively? Tnx from KF7IL.

2334. FS: $100 Vintage Tube Webor Topline Stereo Reel to Reel

Webcor Regent Coronet Stereo Tube Model #2380-1 reel to reel.
Made in Chicago. Excellent running top-end three speed tube unit
from late 1950's or early 60's with extra features. Has separate
optional Webcor compact mini-suitcase speakers that fold into
little suitcase. Handles 7 inch reels. Has top-end options for
its time. Weighs about 38 lbs by itself. No mikes, missing
small piece of cover plate on bottom about 2"x 3" for access
(Just screw in any plate to cover if you wish), have SAMS
photofacts manual for unit. $100 plus UPS Shipping. Will pack
it free.

Have photos if you wish me to email them to you. Must see.

Will consider trades all or in part for Civilian or Military
tube tester as well -- or guitar or bass amp.

Hello. I recently aquired a THS Electronics amp, model
1-10. It takes 1-3 watts in with 10W out. My problem is my
HT only puts out 340mw, and I can do almost .5W with
external power. This is not enough power to trip the amp.
What do I need to do to lower the input? Thanks for any
help.

Downloading Remember for Windows 95 & Windows NT4 Workstation

Remember is an application which lets you put memos directly on your screen, to definitely get rid of all those littlle yellow papers sticking everywhere on your desk... Remember even lets you have an alarm associated to a note. At the chosen date and time, your memo will appear on the screen. You can even associate a file to a memo. When used in a network, Remember even lets you send notes to other users (with or without an alarm or a file associated).

Remember is very userfriendly. Most of the handlings can be done with the mouse. You can easily move a memo, delete it, associate it to an alarm or a file, send it to another user,...

http://194.78.67.50/frames/Rememberdownload.htm

My Christmas gift.

<username@remove.ricochet.net> writes
>Where did you get the information? It actually works. I use Group 1 for all
>the repeater frequencies and Group 2 for scanning police, fire, etc.

The user manual is *so* badly written at the memories section. I did
not figure this out until someone mentioned it here. Then I went back
to the manual and could *just* figure out it was trying to say that.

The manual was evidently written by someone who did not fully understand
the functionality of the handie...or perhaps they are hoping to force
everyone to buy the software interface.

It took me an hour just to figure out how to program the memories. Worst
manual/programming I have seen in a long time.

The DC situation really worries me. But see page 8, second bullet -
"When operating via DC power, installed batteries are simultaneously
charged." So it must operate and charge at the same time - but the
ni-cads may get over charged. I am thinking about buying an extra
battery case, not putting in the batteries and wiring up a jack for
12VDC. There has gotta be some adapter for this. I can't beleive Icom
would sell this thing without DC power options.

1: Don't try to load memories from the keypad. The job's not easy. Use your computer and the supplied software. Job is now a no-brainer.
2: Tone scan function works, but hold key down until scan starts (abt 2 sec)
3: DC Charge connector is on radio, not on battery pack. Appears to be a current limiting resistor in line to keep current in charge only range. External DC will have to come from battery terminals. Make sure it is WELL regulated and filtered. Icom shows no external DC option on their webb page. I bet MaHa batt Co. will soon make one.

2352. Re: Ten_Tec Centaur Model 411 HF Linear Amp.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-27 00:00:00 UTC
From: Bill Clarke <billclarke@mindspring.com>
Message-ID: <34A528A0.E3452661@mindspring.com>
Source record: 158246

Interesting story about those Russian tubes. When they were first tried in the 30L1 amps they failed due to filament droop. Seems the physical layout of the tube was slightly different than the original RCA tubes. Hence, when layed on their sides, the filament could droop and make physical contact (short) with other internal tube parts. Had the Russian tube been rotated slightly about the base, this would not have happened.

Do not construe the above to be anything against the Russian tubes. It is just an interesting story about what happens when a product is copied. From what I have seen, there is little wrong with them.

I have no direct knowledge of the TenTec 811A amp, however, do have with the Ameritron 811A series. I believe the latter to be a lot of bang for the dollar. They are not of the quality you will find in a Henry - but a somewhat more affordable. I have used both the three tube and four tube versions and find them to be as advertised In another words, they do the job.

I am not too hepped up on running them on 110 VAC, unless you have a really good circuit. A good circuit meaning dedicated to the amp alone.

I see them on the swap group for $400 or a little more, from time to time.

RF sensing T/R switches usually use a small capacitor in series with
a resistor to tap off a small amount of the RF signal. The signal is
detected with a diode and used to run a transistor which runs the relay.

To change sensitivity, make the series capacitor a little larger or
the series resistor a little smaller. Just remember that the amp has
about 10 db of gain, so you will get 3-4 watts out.

We can provide either a waveguide or coax filter at that frequency.
Are you looking to build your own, or to buy one? What are your
specifications? Power, BW, etc.

Let me know and I'll send you a data sheet.

2370. Pager Bungie cord for VX-1R

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-28 00:00:00 UTC
From: rotn*appl@ix.netcom.com
Message-ID: <rotn*appl-2812970951480001@nntp.ix.netcom.com>
Source record: 158064

Hello everyone-

I just thought I'd pass on something that has worked very well for me.

To protect my VX-1R from slipping off the belt onto the floor I attached
one of those Curly Pager Bungie cords to it.

I bent a piece of 16 gauge brass wire into a pear shape and silver
soldered it closed. I used the radio's clip as a guide to size and shape.
The top part of the pear shape projects about 1/8 inch above the clip and
is just big enough to clip the Bungie cord to it.

I bought the Pager Bungie at Radio Shack for $10

This looks real nice and is very secure. The cord will easily extend from
5 inches retracted to 20-22 inch to reach the face.

I just wished MARS had as many active members as those who are actively seeking out MARS modifications. Some "amateurs" even announce that they want to mess with the McDonalds drive thru intercoms, use their ham radio for maritime use, talk to their cop buddies on cop frequencies, or scare babies on the baby monitor frequencies. I've seen a Kenwood TS950SDX for sale at a hamfest by a no code technician. By the way, it had the "MARS mod". No, he wasn't a MARS member. What a waste. I wouldn't dream of buying a used, one of the new "wonder handhelds" because of all of the hacking they've been through.
Of course, there are one or two legitimate hams that want to use a transverter and need to open up their radios for that. The rest are pretty much hackers with (maybe) ham licenses.
When your antenna covered car gets pulled over by a Kentucky cop, you'll spend the weekend in jail waiting for Judge Buford T. Justice to release you. Then you can explain that although you're not a MARS member, you just had to have that mod because...
Good will toward men.

The Radio Shack has several models. Be sure to get one that has a
battery backup...in bad weather, when the electricity goes off, you
can still get the latest weather.

RS did sell a 10 meter rig (HTX-100) a few years back. Fairly decent for about $200. But the market - I guess - was not there. I use it as a standby and a mobile rig - great for vacations etc. Kenwood was talking about selling thru the more common electronic retail stores - don't know what happened to the proposal. But I don't think that is the solution. High cost multi mode/multi band HF, antenna acreage -although there are some decent mini footpring HF antennas out there - and lousy band conditions over the last few years have to be overcome.
Talk HF up, use your clubs, be an Elmer, Use it or loose it, remenber the sun spotcycle is on its way up

I can't speak for satellite WEFAX, but the only SoundBlaster HF FAX receiving software I've *ever* seen run successfully under Windows 95 is the new release of WXSAT, which despite the name does HFFAX now too. Thanks to Christian Bock for an excellent piece of software!

I hope to see that the RS sells a multi band HF + VHF rig (not only
for 10m... incl. VHF also so no-coders can purchase it) for around
$800US or $1200CAN.

One of the problem for HF is that the equipments are very expensive.
Also, if you don't hold a code (majority of the amateurs), you usually
don't buy a HF rig.
ICOM-706 kinda solved the problem, but I want to see something better
than this.

I am sure many people purchase the radio if there is such one at your
local RS.

Well, the price was right.

The manual contains no instructions worthy of the name.

The antenna flops around in a most disturbing manner.

It should be marketed as a hand-held 2m amatuer scanner, assuming you can get
it programmed!

2402. NIR-12 Help Needed!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-28 00:00:00 UTC
From: "Tom C. Brown, Jr." <tcb@netdoor.com>
Message-ID: <686rjs$7q5$1@usenet47.supernews.com>
Source record: 158096

Hello-

I received a new JPS NIR-12 for Christmas and it came packed with the wrong book!

I am familiar with the concepts, and have it installed, but I need a bit of additional info to get the most out of it, I think....

My main question is about the proper input signal level:

Is the SIGNAL light on the front panel a "peak flasher" that should never illuminate during normal operation? Or, is it a "signal present" indicator that should flash on and off during normal operation? I think signal level on the input is probably significant and I don't know which way to go here....

Also, I would welcome ANY and ALL advice as to setting the unit up for proper operation and best noise reduction on CW. I don't think I'm getting the best from the unit at this point.

Thanks VERY much for any help you can provide.

A very Happy New Year to all!

73, Tom AE5I

2403. WTB: 1/4 K Manual FSTR520

Source record: 158097
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I am looking for a manual for the Motorola 1/4 Kilowatt, low-band station, model FSTR 520 BR(AS)1A. Built in the '50s and uses a pair of HK254 or 254W finals. Earlier versions of this beast used 100TH's in the PA, and later versions used 4-125's. The exciter/receiver uses standard 'A' series strips, 829B final. Is anyone out there old enough to remember this station and if so, how about a book gathering mold and dust in a box in the basement or attic. I would like to breath life back into this old beast.

Thanks,

Jon W7FHZ

Got one for Christmas (bless my wife) so that we could pull the mirage amp and HT's and all the wiring out of her car and still communicate.

The blue screen is still hard to see well in bright sun but otherwise OK and great at night. The menu feature will walk you through most basic and advanced features without the manual. The "radio" aspect is very good also. Has V+V and U+U feature, DTMF and page functions, built in CTCSS encode/decode/scan and extended receive on both bands which is not mentioned in the literature.

I also own a TM742 which is in my vehicle. The V7A is very comparable except dual band instead of triband.

Did you get the latest AES catalog? Good ad in there. Specific questions? Email me at Doctree2@worldnet.att.net.

I just purchased a Index Labs QRP+ CW/SSB transceiver - this is a NICE little rig!

I've got a bunch of questions; EPROM version; what the last version released? The rig powers up and shows it's serial # 0512. Inside the RF PCB is labeled 1050. U9 PROM has 4C 512 labeled on it, while U8 has 1050 marked on it.

The boards reflect the QST review from 9/96 QST (no AF SSB level pot).

Do I have (or even need) the "latest" EPROM version? Does SGC provide any product support? I would sure like a technical shop manual for this rig..

I've read rumblings of a QRP"++"......And a prior version; Index Labs QRP (sans the "+"). Differences?

Meanwhile, I'm going back to the rig, put on some phone's, and get used to this neat little rig.

Wish list??; 2.4 KHz ~~IF~~ bandwidth to be sharper, backlighting (LED's should do fine), RTTY, Packet and PACTOR operation?.SSB "reverse" above 7.3MHz?...."extended" transmit" aka "MARS/CAP" mod??.

Plans? I've got a few 0.4 watt VHF (145.9) GE MASTER II exciter boards for RS-15 (mode "A" etc.) uplinks (clean CW). Ten-Tec 6 Meter X-verter...

Any constructive help from QRP+ owners is greatly appreciated!

Does your's have that wonderfulyl LOUD PL on transmit?
According to Kenwood the PL is generated by the CPU and there is NO
adjustment to turn it down. Other than that it's a good radio. That a

But maybe you won't even get that if the amp is biased Class C.
Many amps have a manual keying input you can use. If yours does,
try that and see if you get any useful power out. If you don't, you'll
need to bias the amp for linear operation to get any useful output.

>(??) memories and save a large amount of time.

You think you've got a problem over the price? In the UK, it sells for
ukp44 which is equivalent to US$70. I had to pay ukp269 for the radio
which equates to US$430.

A better solution would be to build the MAX232 chip into the radio and
supply the software free with the radio. Yaesu could add US$5 to the
price of each radio to keep RT Systems happy. It would give RT Systems
a similar market position to Microsoft!

2418. Info Needed on Sprague Cap Checker Model Numbering System

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-28 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <684i5b$a3p$3@csu-b.csuohio.edu>
Source record: 158172

Hi,

Does anyone know the Model Numbering Sequuence for Sprague Cap Checkers? And the basic differences in features/specs for the respective model numbers?

Not knowing Sprague's model numbering system, I don't know which model was the top line unit and which was the budget priced unit. For example, which is the better featured unit? A Sprague TO-3; TO-4/TO-4A; or TO-6/T0-6A?

I am looking for a cap checker to work on old instrument/guitar tube amps, but do not know which is the higher model or which models would be suitable.

It seems I see all the Sprague model numbers mentioned above in the $20-$40 range supposedly in good running order, but if I have a choice--I don't know which is the better unit.

Any advice would be appreciated.

Thanks.

2419. Is A Supreme 504-A Tube Tester a Mutual Cond. or Emissions Tester?

From: ACR <n4wfk@erols.com>
Message-ID: <01bd1359$118afb60$d43daccf@dad>
Source record: 158180

Tim D., since you do not respond to my emails, I am posting my last message to/about you here. I know the macho thing to do is one up each other here on the newsgroup but it is not fair to the other hams who want to look at forsale posts and so if you feel the need to post N4WFK deseased? messages then go at it all you like. The only ones that will get mad are the other persons who have to look at it and they will be mad at you. I have made my point and that is it. My appologies to the group.
You can email me at the address listed below. I am not posting the details of the earlier problem that I had with you because unless you are a total dolt, you should remember well.

Before posting a message to the newsgroup, I emailed you the other day asking if you were the same Tim D. who was selling an 850 about a year and a half ago. I got no resonse. I also checked deja news which archives old news articles to verify you were the same guy, phone number matches, etc. Now, after I posted my recent caution to the newsgroup, you first post a response back to the newsgroup calling me a "ying yang". What the hell is that?, and saying that "I'll ship it now", referring to the supposed 920. So in effect didn't you then indirectly admit the first wrongdoing? What do you expect?
Next you want to come see me.

Your a pilot? I find that extremely disturbing. Your coming down here to deal with me? In what way?, Are you threatening me?

In closing, you can go on posting to the newsgroup as you wish, but I'd be more than happy to carry on an email discussion offline of exactly what your motive was in wasting my time and energy on the earlier purchase attempt and what should have been my response. Email is where this should be anyway.

If you want to come down and attempt to do me some physical harm, I would suggest that you go outside and practice throwing your sorry ass on the ground and getting back up. Also I think you need to bring me about $20 for the long distance calls made to you when the 850 was the subject. If you can whip me then I'll let you leave with your $20 and I'll put $20 of fuel in your tank. Louisa airport is the closest airport to my home (about 20 min) 3400 ft runway, I think. I would be more than happy to get all the info you need. I know some of the pilots there. If you feel it necessary to say what you have to say face to face then let me know when you will be landing. Don't make it next week, next month, next year, bring your jaybird ass down now and I'll meet you at the airport. I would prefer not to do this during the normal 9-5 work week for obvious reasons. John Pendergraft keeps his word. Anyone who has dealt with me knows this. I will meet you homeboy. My property however is clearly marked "No

Tresspassing" Consider this a firm promise, If you come to my home, I will consider that a hostile act of putting my family in danger and am prepaired to use terminal force. Again, if you want to toss a few knuckles at the airport then let me know when, fruit cake.

Yes, I know exactly what your problem is and it is rarely a defective
part. Rather its the radios own ageing process.

The late Harry Hontz -- I foget his call sign -- was a master at
repairing those radios -- and I remember him distinctly explaining the
problem to be ageing and contamination of the "bees-wax" used to deal
the synthizer parts. His cure was to remove the synthisizer board;
remove the beeds-wax (he never explained the process); re-solder all
components to the PC and then seal the synthsizer in epoxy
"Clear-Cast." As I remember, he charged a flat $75 for this repair and
never had a 13-513 bounce back at him.

I do know of one two-way repairmn in SAn Jose who will repair your
radio if you have a schematic on it. His name is Mike Vargo, N6HIC. I
do not know if he is good in the Callbook yet as he only recently moved
there. His company is Info-Telemation and e-mail may be
info-mike@juno.com -- tho I am not sure.

Hope all this helps.

Have the battery tested under load. Ni-Cad packs can be totally
useless but check at full rated voltage under no-load conditions. Most
two-way shops can make this test. Just tell them that its a Maxon
clone of an Icom battery.

From: ACR <n4wfk@erols.com>
Message-ID: <01bd1395$c591e650$d43daccf@dad>
Source record: 158190

I have a 570 and it too makes the clicking noise as it is tuning. I also had a Yaesu 890 and it too did the same thing while tuning. I hesitate to tell you that this is fact, but I think both these radios use a series of relays that switch more inductance and capicitance into the circuit until the match has been accomplished. Someonel else might elaborate but your 570 sounds normal.

2437. Re: Kenwood TM-455A Mods Wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-28 00:00:00 UTC
From: ka0yos@aol.com
Message-ID: <19971228134001.IAA12578@ladder01.news.aol.com>
Source record: 158191

I don't think you'll have much luck. I own a TR9500 430-440 all mode. There are no mods for the repeater sub band. The TR-851 is the same way. Apparently Kenwood thinks we should have two radios for this.

73,
Joe ka0yos

2438. EZClone For the Kenwood TM-V7A

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-28 00:00:00 UTC
From: wa4vrv@srv.net
Message-ID: <34a65994.615142@news.srv.net>
Source record: 158192

Has anyone had success with the EZClone Software for the Kenwood TM-V7A?? I have the software and cable, but cannot get it to program my rig. Tried two different computers and no luck. Called the people at EZClone and they just blew me off as they do not support their own product!!!

Any ideas??

Source record: 158197

HI and thanks for reading, I have a Yaseu FT 757 GX, A FP 757 HD(power supply/ speaker) and a MFJ 949C tuner for sale. The Rig covers .5 to 30 meg, and EVERYTHING in between and is a 8.5 on a 1-10 scale. The FP757 HD is the matching PS/Speaker that powers the unit and is a 9.5 on the 1-10. the Tuner covers 10-160 and works well with the rig. I also have the books for the radio tech manual and opareter manual I do not have this for the PS/Speaker. If you want the 10-160 dipole I will take it down also . the rig is up and runnig if you want to hear it. I am asking $650.00 for ALL. This is a GREAT set up for the beginner or a a back up rig. PLEASE E-Mail me I don't have the time to come here to often!!

Source record: 158198

Gee, and I thought we had such a wonderful and helpful fraternity here.
Folks who *enjoyed* sharing information with one another.
Oh, and last I checked (you see, I have done the search you so delicately commanded ... long ago), the site you list does not contain all of the possible mods -- by a long shot!

Finally, how do *you* know whether or not I "should" be doing the mods I choose to do? What is wrong with a MARS mod, or a widening of receive just above and below 2 meters, or adding 160 to a linear?

Please re-read your post and consider your tone, I for one found it unnecessarily assaultive and a bit rude.

Happy HOLY Days & a blessed New Year to ALL, DavidC AA1FA

Knowing the serial number would help but a mint condition (very few
radios are actually mint) 75A4 would be worth around $800 to $1000. I
am interested in learning more about it. Send email or a phone
number.

Jeff,

If you have web access, check out http://artscipub.com/repmain.html

There is a whole a list of open repeaters there. I don't see shelton on
my map, but you could try the following for starters:
Bolton 147.345 +
E. Haddam 147.015 +
Tolland 146.416 147.415
Trumball 141.7 +
Waterford 146.97 -
W. Haven 147.505 146.505

Hope this helps.

The 440 is a nice rig, as is the ICOM 735, I've owned both. Either one may be had for about $500. if you are patient and vigilant here on the newsgroups and the ham swap sites.

Beware the early run 440's, they had a vfo problem that is a pain to fix
..
but no big deal. Just try to get a 9 million + serial number and there is no problem.

Someone was offering an Alinco 160-6 meter rig for $650. with a couple of accessories - not a bad price (a TenTec transverter for 6 is $99. in kit form, so you are actually paying $550. or less for a 160-10 HF rig with a built-in transverter for 6!).

Message-ID: <OiCh0mLF9GA.240@ntdwwaaw.compuserve.com>
Source record: 157966

What great fun! I wish I was 14 again so I had time to undertake such wonderful projects. Well.... OK, I don't, but I wish I had the time to undertake such wonderful projects... HI HI.

It seems that Joe Carr has a book on Amateur Radio Astronomy, but I couldn't find it in Amazon. Probably out of print. However, there are some useful measurments (especially planetary) that you can make without a dish (I'm told). Joe also writes for 73, Nuts and Volts, and one of the other mass media electronic magazines and often talks about Radio Astronomy.

But, I have a question for all the Radio Astronomy buffs out there. Time dilation says that
Ra=Rb(1-(v/c)**2)**.5
(I think I got that right)

So thing moving very close to c (relative to something else, of course) experience time faster than the relative something. The old saw is you take two twins, send one of them to Alpha Centauri at .95c and when he gets back he is younger than his twin brother by some amount.

Now my question concerns modulation. Assuming aliens send us a message. And assume that the c is constant to all observers (because Einstien tells us so). Ok, but the modulation is not dependent on c and is not constant. So if Planet X is moving away from us at a very high speed (apparent to us) his modulation will seem very very fast to us (maybe fast enough to miss)?

Am I missing something here? Or is nothing in the galaxy moving that fast relative to us? I have no idea, I'm an EE masquerading as a software guy and while I used to be a designer on the Space Station (several revs ago) I don't know beans about SETI.

Just something I've always wondered about.

73,

Al WD5GNR

2467. FT-50RD Fixes & Latest Serial Numbers

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-29 00:00:00 UTC
From: pboyle@amerusJcommercial.com
Message-ID: <34a80074.15464355@news.dialnet.net>
Source record: 157972

With what digits do the latest FT-50RD's begin?

Perhaps a better question would be: "What serial number (and forward)
would include all of the known Yaesu fixes for the FT-50RD?

Greetings,

I have an ICOM IC-251A that has be tuned up ICOM. Comes with the manual, new desk microphone, and an IC-SM-5 desk microphone. Only $485 Shipped.

KENWOOD TS-520SE with hand microphone,original manual and carton. Excellent shape. Covers 10-160 meters minus WARC. Only $350 shipped.

KENWOOD TH-77A 2/440 Dual-Band Hand Held. Checked by Kenwood recently. Modified for extended transmit and recieve, aircraft/2m/440/800mhz. Includes KSC-7 Desk Charger, BT-6 Battery Case, Rechargeable Battery, orginial manual, container, and modification sheets. Shipped to your door for $295.

VHF ENGINEERING PA140/10 2 meter VHF Amplifier. Large heat sinks. No manual, obtained in a trade. Only FM mode. Shipped for $125.

KANTRONICS KAM PLUS, with Host Master II+ software, only $275 Shipped. This is my second KAM and very little use. MINT condition.

Radio Shack DSP-40 Digital Signal Processor, New in Box, Shipped for $60. One opened, used in excellent condition for $45.

TUCKER T-1000 300 watt Antenna Tuner, (same as Vectronics VC-300DLP), shipped at $120.

Looking for an HF AMP for 10-160 to include WARC/MARS. Will trade towards and depends on the model and age, include $$$ for the difference. Will consider 80A/B and Alpha amps -

Also looking for ICOM IC-706 radio with or without separation kit.

As others might have mentioned, this is old technology. NOAA will
eventually be doing away with the 1KHz tone, going instead to the digital
databursts that specify a certain county or counties. That way, warnings
are more effective and earmarked for just a specific listening area.

Radio Shack was the only distributor of the new radios, but some others
are coming out on the market very soon. Save up your pennies, they're not
going to be cheap ($70 or so), but they'll be worth it.

Have fun!

>
>now QUIT asking for mods you should NOT be doing anyway.

I think that anyone requesting mods on this or any other usenet group have already done extensive searches on the internet (I know I have). It is also too bad that the people that request mods for MARS/CAP use (and there are MANY of us out there) or for workshop/education purposes have to be ridiculed. In agrteement with the others that have responded to this posting, I feel that there is nothing wrong with extending the receive on a radio as long as it does not violate any FCC regulations.

In conclusion, can't we all just get along?!?!...People that would like to exchange information...FEEL FREE TO...those that do not , please don't bother us, it's not your licence.

Thank you all for your response to my questions about the Radio Shack Part number for the monitor .. What I'm looking for is a decoder to decode the actual stream of information, or atleast find out what the protocal is for the data stream. I'm wondering if it is 1200 buad - AX25 protocal, and that maybe a cheap TNC would decode it .. Anyone have the spec.??

2479. suggestions for hf solid state radio

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-29 00:00:00 UTC
From: briordan@earthlink.net
Message-ID: <34a723ce.3593622@news.earthlink.net>
Source record: 158017

I'm saving up to trade in my tube radio (TS-520S) for a solid state radio. I'm on a pretty tight budget. The two that look the most reasonable are the Ten Tec Scout and the TS-440 (borrowed one for last field day, and it didn't require much reading to use). Has anyone had any experience with the scout? Are there other rigs I should be looking at?
Thanks
Brian

>Can anyone tell me which pins on the accy plug are used to key an
>amplifier? stan
NONE.. The 706 MK II does not have the ability to direct key an
amplifier. MFJ's ARB-700 was built for the IC-706 / 706 MK II. You
connect the ARB-700 between the 706 MK II and amplifier or look in the
November 1995 issue of QST about page 85 for a good Opto isolator
circuit that will work fine. The ICOM 706 and 706 MK II will ONLY
direct key ICOM amplifiers. Keying aftermarket amps directly will
surely void the warranty if some troubles arise due to the after
market amp.

Hi,

Im a 14 yr old kid who likes astronomy. Right now im heavily into optical astronomy. I would like to get into radio astronomy. Im sure some people will say im crazy, but I would like a nice system that I could use to search for extraterestrial lifeforms. As of now I know nothing about radio astronomy. I would like someone so recomend a system for me, please be very specific. I dont have a whole lot of money so it cant be too much. Please let me know what it would cost. Also please tell me why the system you recomend would be good. Thanks a bunch.

SPRAGUE TEL-OHMIKE MODEL TO-3 CAPACITOR ANALYZER

Unit is in alright physical shape for its age, but obviously not
perfect. The unit needs repair. Meter, Dial and switches seem
okay, but I could not test it. This unit is good for someone who
is handy with electrical repairs that desires to repair it.

Do not have leads or manual, but can provide copy of the T0-6A
manual for reference. $45 or best offer.

> a cheap TNC would decode it .. Anyone have the spec.??

520.83 baud.

A quick explanation is here:

http://www.thuneagle.com/same.html

I have not been able to find any "official" documentation yet.

A few commercial decoders:

http://www.htcnet.com/msftrncs/products/nwsamd/default.htm
http://www.hamtronics.com/rwx.html
http://www.thuneagle.com/

Dunno' why they chose such a weird, non-standard baud rate. I'm
sure there were political reasons...

Have fun!

You can extend the TX/RX range from 440-450 to 430-450 holding down a couple of buttons.
Maybe the guy doesn't know that?

Dereck, congrats on being 14 and interested in science. I don't know
much about radio astronomy, so I can't be of much help, but I can
give you encrouagement. I think most work in this field is being
done with LARGE dish antennas and very high quality receivers. But
I bet you there is info out there that will help you get started
with a low budget setup.
I started in HAM radio at about 12 or 14 (I'm 59.5 now) by reading
mags and books on radio construction. Been building all kinds of
stuff ever sense. I learn so much reaserching a project and building
it. Taking old throw away radios and TVs and making them into something
I can use in the hobby is my hobby in a hobby. I've built several
telescopes over the years, (back when lenses were inexpenseve) got
most of my stuff from Edmonson, but their prices have gone out of
my range for experimentation.
A foot note to all this is that my wife gave me a Jason 675 X 4.5"
reflector scope Model 518s for Xmas. It's the first polor mount I've
ever owned. (now this is a learning experence).
Enough babble from an ol man, keep up the good work Dereck.

I have had the NIR-12 for over one year, so perhaps I can help. The
book says that the light will flash at a level below that level where
distortion would begin. It suggests that occasional flashing is proper
but continuously lighted would be improper.

>Also, I would welcome ANY and ALL advice as to setting the unit up for
>proper operation and best noise reduction on CW. I don't think I'm getting
>the best from the unit at this point.

I don't know if I can answer the question about reducing noise on CW.

Actually, that's the mode (CW) where improvement of signal to noise is
the simplest - even for the naked receiver.

The NIR mode was designed for speech, so you have to back off the NIR
setting to avoid having the signal processor removing your wanted
signal. You also need to use the back panel "bypass" line tied to
your transmitter keying line so as to keep the NIR-12 from screwing up
your CW sidetone signal during transmit. Personally, I would use the
NIR very sparingly, if at all., and of course leave the NOTCH off.

DYN PEAK should be set up to improve sig/noise on CW by scrunching in
the upper and lower cutoff frequencies as shown by the "CW" marks on
the two freq. controls. Then with the DYN PEAK switched in you will
get processing enhancement of the signal.

Unless you are an experienced CW operator you may not realize the
necessity of first tuning your receiver itself properly by using the

audio gain up near full and the RF gain backed off to give a comfortable level of audio.

The problem that I have with my receiver, that I think was an atrocious design error on Kenwood's part, is that my CW filter (on the TS-450 its a 200 HZ filter in the 455 kHz IF) is not centered properly in the IF passband for a CW signal, When you tune to get a beat note that is at the same frequency as your transmitting sidetone, the received signal is outside of the filters passband. How about that for stupidity. Of course, it may be that I just don't know how to use it. The IF Shift control does help. It's just a good thing that I don't operate much CW- Hi.

Unusual ROBERTS 1725-8L III REEL TO REEL & 8 TRACK DUB DECK

A Very Unusual deck for 8 Track lovers. This unit was probably made by Akai is my guess for Roberts. Says Made in Tokyo Japan on it.

From the Back of the Unit it states:

MULTI-PURPOSE TAPE RECORDER

4 Track Stereo/Mono Reel to Reel
8 Track Stereo Cartridge
Transfer from reel to Cartridge

The unit appears physically in fair to good condition for its age. I do not have a power cord to fit the unit or manual, so I cannot vouch for its mechanical condition by testing it. It is best to assume it may need some attention. $50 or best offer.

Plus UPS Shipping costs which are not much. I'll pack it free and bring it directly to UPS to get you the lowest shipping rate.

I am looking to get a nice computer controlled scanner rig and I have some general questions on how the ICOM PCR-1000 stacks up against a WinRadio or a handheld (like the AOR 8000 or the Alico DJ-X10 or any other handheld) when using something like Scancat.

I am interested in sensitivity comparisons and software comparisons. Any and all responces will be helpful.

The last question is how nice is a receiver like the AOR 5000 when compaired to these other scanners. Obvously the 5000 is going to be much better, but would you say the it is 4x better.

Thanks for all the help!

2504. KW TS440 PC Interface Details ????

Well Dereck, the best way to get started is to get a vhf or uhf reciever and point a directional antenna toward the sky over time you can monitor galactic noise and you'll see a peak when you pass by the center of the galaxy. You can also build a downconverter and use an HF or shortwave radio. Even the most basic system will cost you at least $100 assuming you have a good shortwave reciever. Plus you need some fair experience with radio and RF to get the thing going.

If your looking to actually monitor 'signals' from pulsars etc you'll need equipment in the thousands of dollars, check out the book Radio Astronomy by John Potter Shields, Its an old SAMS publication but a good primer for you.

Well, in a round about way they do sell HF rigs.

Tech-America started selling the Alinco HF rig and they are owned by Tandy and I think you can order their stuff through Tandy.

In real terms I don't think there is anywhere near a big enough market for RS to start stocking and selling HF rigs. They are a high end expensive item that will not have a very high turnover so most of the stores will not want to stock them.

Dereck

Dereck, the bad news is you're gonna have to build your station. The good news is.....you're gonna have to build your station!

The most critical part of a SETI station is your antenna. Your only realistic option is a dish, and the bigger the better. I wouldn't bother with much of anything under 8 feet.

The receiver depends on what part of the spectrum you are interested in. I believe AOR makes scanners that go up to 2 GHz, and you should be able to find a used one for around $300. I think most SETI activity is in the higher microwave bands, though. I don't know of any commercially available receivers that cover the spectrum above 2GHz, so again, I think you are stuck with building (read: get to build!) your receiver.

You will need to make provisions for steering your antenna... ideally you will set up a computer-assisted system that will find, aim and track the area of interest as it moves across the sky relative to you. Of course, you could settle for the "Armstrong Method!"

Should you or any other SETI researcher happen to run across a radio signal that can't be explained by natural phenomena, I doubt very seriously that it wil be modulated with an alien voice saying "Howdy, yall!!" in perfect English, or Spanish, or Urdu, or Tagalog, or Russian, or SwaHili, you get the picture. You will want a spectrum analyzer, which can be PC based to cut down on the cost. Most likely any signal would be on/off modulated for simplicity's sake.

and would be some recognizeable pattern, though other Frequency or Phase shifted modulation methods might be feasible at slow speeds.

Assuming there ARE any aliens out there trying to get ahold of us, put yourself in their place. You will want to send a signal that will punch through hundreds of light years of space, bouncing around off dust clouds, stars, planets, comets, asteroids, space junk, etc and still be recognizeable as coming from a sentient life-form.. You want a signal that is likely to be recognized, if not understood, by a culture and technology strange and unknown, even bizzarre to your own: something truly universal. Some things are universally constant and should be recognized for what they are by any sentient culture capable of building a radio receiver: structure of atoms and molecules, the concept of Pi, things like that. That's what you'll be looking for, not I Love Lucy reruns interspersed with Herb's Used Spaceships commercials. You will be trying to pick off a data stream out of the background radiation of space, and you will be using something other than a pair of headphones to do it with, I think. You will probably want to write a program that searches for any regularly occurring changes in signal parameters over periods ranging from micsoseconds to days.

The best advice I can give you is to get your ham license, and upgrade, upgrade, upgrade. This is the most painless way I can think of to develop the technical skills you will need for this project, and you will probably find hamming enjoyable for it's own sake even if you become disillusioned with your SETI (Search for ExtraTerrestrial Intelligence) project. You will learn techniques and sources of information that will be of great help, and I don't see why your setup has to cost more than a couple hundred bucks if you do it yourself. If you are a good scrounger, it might not cost anyything at all! (except your time and labor)

Good luck, Dereck. Let us know if you find anybody out there. Serious.

2514. ## Is anyone using the RadioShack "ProbeScope" and willing to share his experience?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-29 00:00:00 UTC
From: tinkerman97@usa.net
Message-ID: <ELyx24.K0I@news2.new-york.net>
Source record: 158052
Cross-posted to: alt.comp.hardware.homebuilt,alt.comp.hardware.pc-homebuilt,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,sci.electronics.equipment

Hello friends,

I'm looking for a lowcost, portable and small osciloscope for simple debuging applications. Although very basic in functionality, the RadioShack "ProbeScope" seems like the ideal tool for what I'm looking for, because:

1. It has a mini display for portable operation.

2. Can be interfaced to a PC for a larger display.

3. Sample rate (20MHz) is about right. The low vertical resultion (6 bits), limited input range and even the tiny 128 buffer depth all seem to be bearable.

It's almost a toy compared to the professionals, but for what I need and considering it's size and cost, I find no better alternative.

Since Radio Shack are not responding to my technical questions in a reasonable time. I need other users help. What I'd like to know is:

1. Is the PC display mode good enough to be useful in the lab for simple tasks (the LCD defenitely isn't, it's too tiny)? Has anyone got a screen capture that he can send via email?

2. Is there any s/w out there that can provide longer sampling intervals or improved functionality?

3. Can the bundled DOS s/w run on an XT class machine (I want to run it on my palmtop!)? Although RS state a minimal CPU requirement of a 386, the other requirements can be met by a simple PC (DOS 3.3, 600K RAM, etc. If not, is there any 3rd party DOS s/w that can do it?

4. Is it still sold at RS and if so, at what price?

5. Most important: are there any QUIRKS I should be aware of about this product?...:-)

Thanks in advance for any help offered.

Note: when Replying, please email me directly in addition to posting here, so no responses are missed. Don't forget to remove the "97" from my email address inserted as an anti-spam counter measure...:-)

Thanks and best regards,
Tinkerman

Having owned a 75A4, A3 and A2 receivers, among other Collins equipment, and keeping in mind that this receiver probably was made in the 1950's, 100 dollars is a fair price. Even if someone found one in an unopened box, you still are dealing with a handful of potential problems, beginning with the mechanical filters. If they are in good condition, the filters might fetch 50-100 dollars, but so what? A good bump and the whole thing might be useless. The "hertmetically sealed" VFO unit in the receiver often needs an overhaul. Let's see the hands of those who want to do that. I had to re-wind the transformer for the passband tuning circuit on mine 20 years ago, and replace a bunch of tubes, etc. etc.

I'll be happy to take any questions about the overhaul of one of these babies, but don't expect wonders. The selectivity is good with the proper filter installed, but they are of course ham-band only. Mixers were typically noisy as hell, and like all super-hets there are birdies all over the place.

LOGic5 and DXBase97 both look like contenders and are both Win95 apps.
I've ordered DXBase97 but haven't received it yet so can't say how
well it works. LOGic has a demo available on their website.

These are the only two true Win95 apps I know of so far; most of the
rest seem to be stuck in the DOS dark ages or are thorougly cheesy and
poorly implemented Windows apps.

Hello. I'm in need of a bit of assistance. I have an old crystal rig that I need to use, on the frequency of 146.52MHz. The rig transmits fine on this frequency, I alligned it with the trimmer capacitor next to the crystal. But the receive is off. It receives at about 146.48MHz There is no adjustment for the receive crystals. Should there be? What could be wrong? When a crystal goes bad, it doesnt go off frequency, does it? If so, does anyone have a 146.52 crystal they want to get rid off?

Speaking of crystals, what is the difference between a TX crystal and a RX crystal? Impediance? The crystals in my rig are labeled with a R and T for TX and RX. Thanks a lot for any help. Please reply to

I am in total disagreement with this gentlemen's position on this matter. I have been a Collins collectors for say 14 years and am still active and an 75A-4 that had been run over by a truck would fetch $100.00 for the remaining parts after you scooped it up with a shovel. The filters for example like the 500 cycle and the 6KC will sell for $175 and $200 respectively and I will pay that without question as long as they do not exhibit any loss from the original spec. If the unit has a 4:1 main tuning knob, that and the gear assembly for they will sell for $150.00 by themselves. In some cases a unit is worth more dead than alive if you part it out.

A late production A-4 will start at $650 in very good condition and go up in price accordingly to as high as $950.00.

Message-ID: <19971230175301.MAA27656@ladder01.news.aol.com>
Source record: 157866

Hi Clark, George, K1RBS. I have an MFJ 259 here, really like it.
Mine started out as a 249, I bought the upgrade kit from MFJ, made it a 259.
(the difference is that the 259 gives a reading indicating the
impedance- handy although not the equal of expensive GR or HP
units). The counter is a handy function, although I seldom use it.
Because of my unit, HRO / Salem has sold five more of these, after
local hams realized how handy they are for antenna work. I would
not go for the earlier unit, (207?) even if it were much cheaper. But,
that's MY opinion. Some people fault MFJ, but based on what I have seen,
particularly the 249/259, they should be congratulated,
it is an outstanding product. Solid state stuff does not tolerate mismatch, and
use of the 259 could save a rig, in addition to improving the performance
on-air.

Hi Ryan,
It is unusual but not unknown to not have a rx adjustment for your
crystal. Yes, crystals do drift due to ageing. Bearing in mind that the
actual crystal frequency will be considerably lower than 146.48, a small
change here will be proportionately larger at the operating frequency.

The reason you have different Tx and Rx crystals is because they employ
a different mixing/multiplication chain to reach the final frequency.
As I said earlier, your rx crystal will not be at 146 MHz but something
much lower in frequency, possibly around 15 MHz or thereabouts.

If you quote the equipment model along with the wanted final frequency
to most reputable crystal manufacturers, they will more than likely
know what crystal to provide. The cost is cheap (in the UK around 7
UKP) it is not worth trying to find one here.

Jim, you just flat don't need a RF Earth ground if you are using a
balanced antenna (a dipole is), fed in balanced fashion (ladder line
and a balanced tuner is). You only need to concern yourself with
an RF Earth ground if you are working an unbalanced antenna
against Earth, IE a ground mounted vertical is an example. And
in that case, you want the good Earth ground at the antenna base,
not way back at the radio, anyway.

So don't concern yourself about trying to achieve a good RF Earth
ground at a second story shack. It is difficult to do at best, and you
don't need it. Now you do need lightning protection. One way to get
that is to let the feeder go down to Earth, attach to a suppressor,
and then come back up to the shack. (Naked gas tubes are available
from Polyphaser which are suitable for suppressing ladder line.)

this kinda thing can happen when your tranceiver doesn't much with the
antenna. I had the similar problem with HTX-242. After I
corrected the antenna line and SWR, the problem resolved.

2539. Can you help make an 11 y/o ham's holiday a little brighter? Help.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-30 00:00:00 UTC
From: spambuster@greeneggs.com
Message-ID: <68bnot$913@elf.wang.com>
Source record: 157878

URGENT:
PLEASE FORWARD THIS MESSAGE TO ALL INTERESTED PARTIES.

Happy Holidays.

The Waltham, Mass ARA, needs your help.

Christie Aponte, WP4MTI, is an 11 year old girl from Puerto Rico. Her mom, Laura (WP4MSO) and Grandfather Earle Blizzard (OZ1LHH) originally hail from the New England area, and are well known to the ham community who populate the 146.64 Waltham MA repeater.

Four years ago, Christie, her mom and dad were injured in a horrible car crash. Although her parents escaped with broken bones, Christie was seriously injured and nearly killed. Her condition was so perilous that she had to be airlifted to Boston Childrens Hospital for surgery. She currently is confined to a wheelchair, and doctors are not sure whether she will ever walk again.

During her initial visit to Boston, Kathy Pate (KA1IYR) and Dave Crocker (W1TMO) befriended her, and did an admirable job of making her feel welcome in a strange city far from home. During this first visit, in spite of all of the stress and distractions associated with her medical rehabilitation, she passed her novice license, and began working on a Technician-class upgrade. She attempted the Technician exam with one of the Boston-area ham clubs, but missed her goal by a couple of questions.

If all of these problems weren't enough, a number of other events added to her already heavy burden.

1. Her three closest friends in this country, namely her grandfather, W1TMO and KA1IYR all passed away within a short period of time.

2. Her favorite dog that stood by her side during the first rehab period died while she was undergoing further surgery.

3. Finally, the family home was burglarized while her mom and dad were visiting her at Childrens'. The thieves stole all of the radio equipment that she inherited from her grandfather. This took Christie off the air, and isolated her from all of her radio friends.

This year, Christie is back at Childrens' for painful spinal surgery, and will most likely remain in the hospital over the holidays. In spite of all of this adversity, she still has a great attitude, and is dedicated to getting well again.

Seeing how her family has little time or money to replace the stolen radios, we've decided to collect donations to replace her stolen ham station.

I'm sure that everyone will agree that no child should have to spend Christmas recovering from major surgery in a hospital far from home, and we're hoping that our gift will let her know that she's not alone in this frightening battle. This gift will allow her to listen and talk to local hams using her mom as a control operator. In addition, the radio will hopefully help her to forget her injuries so that she can concentrate on passing the Technician exam to upgrade her novice license.

If you can help bring some joy to an innocent 11 year-old by contributing $20 (or any amount you choose), please mail a check or money order as soon as you can to:

Anne Weldon
KA1PON
14A EMMETT ST
Marlboro, MA
01752

Please include your name, callsign, address, telephone and an email address with your donation so that we can confirm the receipt of your generosity.

We will post full details regarding the purchase on the WARA web page. Any additional moneys collected will be disbursed in an appropriate fashion.

Please send questions to me at n1aup@amsat.org or leave a message with Joe, W1EK at 617-965-1750. Please postpone hospital visits until Christie is back on her feet.

Thanks, and Happy Holidays!

Kip
N1AUP

Check out the Christie web page for more information.

2540. For Sale: GE Mast II

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-30 00:00:00 UTC
From: Big_Red_One@Juno.com
Message-ID: <34a96e51.108666814@news.bright.net>
Source record: 157879
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,oh.forsale,us.forsale.misc,us.forsale.d,misc.misc,us.misc

For Sale

GE Master II radios 144 to 160 Mhz.

Some have PL encode/decode 100.0/146.2

50 Watt transmit .5 uv or better receive. (ALL WILL BE CHECKED BEFORE

THEY LEAVE HERE THERE WILL BE NO DUDS).

Some may come tuned in the ham band as I have done this to a few to make

shure they work well there.

Currently on Goverment frequencies but tune to 2 meter ham verry easy.

Each package contains:

One radio.

One control cable.

One control head 8 channel.

One microphone.

One speaker.

One transmit/One recive ICOM without crystals.

One PL incode/decode board and hook switch as available.

If you buy 5 or more (limit 25 as that is all I have) you

will receive a compleat service manual.

The cost is 75 dollars plus shipping FIRM!

Crystals can be installed for one frequency tx/rx for 40 dollars.

You are responsible for any additional ICOMs and crystals as there

are not enough to do more. If you order the one channel installed

you must wait 4 to 6 weeks for me to order the crystals from my supplier

and them to ship them to me. The time can be shorter but the

supplier raises the price to me and I to you.

If you want to order your own crystals and install them your self

you can order them for 10 dollars each (20 dollars a pair 1 tx / 1 rx)

from:

Hy-Q International

1438 Cox Ave.

Erlanger KY. 41018

606-283-5000

COD or money orders only no credit.

DO NOT buy JAN or BOMAR crystals as they are shipped off frequency

and usualy fail within 6 months.

Any repeater mods you want are up to you to do.

All orders and shipping are to be handled through Rich KA8CMK at Big_Red_One@Juno.com

way he want's to do it.

Thank you for your time

Wayne L. Anderson

Hi. I have a Pasokon SSTV board for sale. I'm the original owner.
The board is in perfect condition, and includes the software and manual,
and a copy of the original article in QST about the board. Asking $125.
I'll pay shipping and insurance (to the US). If interested, please email
to the address listed below, and we'll swap particulars.

Thanks very much,

Ken

PS This is perfect for an old PC. A 486 and DOS is perfect. Windows
not required.

Help me on this... How much is Phil wanting in US Dollar??? I think I paid $350 back a year plus ago, from someone local and wanting out for a new hobby... Then I added the tone board from someone else who never installed it for (I think) $50... It is the American version, did I do OK??? It makes a great radio and I'm happy. I haven't looked to see what the stores are wanting for a used unit...

2548. YAESU FT-920 Questionable Quality / Crapola

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-30 00:00:00 UTC
From: Sam & Jeannette <klassi@onr.com>
Message-ID: <68c1ll$5p0$1@mari.onr.com>
Source record: 157887

I have an early serial number FT-920. Today I sent it back to Yaesu California for the third time. The first time was for the NB/MONI ground loop design flaw. The second time was due to the tuner circuitry failing. Today the exact same tuner problem started again.

I have never owned a radio with so many problems is so short a time. As a matter of fact, until I bought this Yaesu product, I never had ANY problems with my radios (all Kenwood).

Be warned. My FT-920 has been a disaster. If you decide to buy one, at least go forward with your eyes open.

Sam Stimson

The cost is 75 dollars plus shipping FIRM!

Big Red,
When you exhaust your supply of Master IIs your welcome to the following:

THATS RIGHT COMPLETE GE MASTER IIs FOR LESS THAN $10.00.
(can you buy a mic for that price?????)

LOOKING FOR LARGE QUANTITY PURCHASERS !!!!!!!!!!!
MINIMUM OF 50 UNITS AT A TIME 50 units/$700.00

230+ units TAKE EM ALL FOR $2200.00

Trucking can be arranged !!!!!!!!!!!

If you pick up at our warehouse dock in Medina NY.
(40 miles west of Rochester, 40 miles N.East of Buffalo)
We'll pack em at no extra charge

Actually there is probably closer to 250 units, I'll guarantee at least
230 !!

INCLUDES ALL ACCESSORIES, TRAYS AND CABLES ... READY TO GO !!!!
CHANNEL ELEMENTS, PLs, Noise Blankers etc are in units. Most have 3-4
channels simplex.

QTY= 150+ Low Band Includes Comb #MC64KEW33A
MC74KFW33A
MX74KCU33A

QTY= 80+ High Band Includes Comb #MC56KBU66A
MC56KKU66C
MX66KCU66C
MX66KEU66C
MX66KFU66C

These are recent pulls from a utility company.

This is about 7-8 pallet boxes full of equipment. It is all pretty much
sorted and in pretty good shape.
Some units look like new others obviously look used.
Some units packed in separate boxes (when they pulled the radios theyput

them in the box that the new radios were in).

I have a mint yaesu ft-101zd that is no longer being used. This model
has the built in digital display, orginal manual, mic, matching speaker,
500hz cw filter, 100 watts on 10mtr, 145 on 160mtrs.
Also, I have a Yaesu fl-2100 amp mated to the ft-101zd. Amp does
500watts on cw and is strong, solid and also in excellent condition.
Still has the protective plastic cover on the face.
Asking $400.00 for the ft-101zd and $400.00 for the amp, trade is also
possible.

Mine's been fine and it's an early one-purchased at Dayton '97. The NB/Mon is a legit complaint but I just turn down the monitor gain and it's gone. I'm going to wait a few more months and send it into Yaesu before it's out of warranty. Note I've also got a 1000D and 1000MP and I like 'em all for different reasons. You may want to check out WM7D's web page on the 920. I think if you handle this properly that Yaesu will make good on this radio. I appreciate your frustration-try to hang in there and approach it in a gentlemanly and businesslike manner. Best wishes and happier new year !

Hi Ryan, I saw that another person replied as to the whys... I am wondering if you have the formula for your xtal selections.. something like [f - (if)] /12 for RX or f/9 TX etc..

If the formula for selecting your frequency is a comon one, I should have the crystal you need for the cost of postage. Possibly others as well.

Jim, KB6ZOP

Greetings,

I have an ICOM IC-251A that has be tuned up ICOM. Comes with the manual, new desk microphone, and an IC-SM-5 desk microphone. Only $485 Shipped.

KENWOOD PC-1A Phone Patch Controller with manual and four pin adapter if needed. Good condition, shipped for $60.

KENWOOD TS-520SE with hand microphone,original manual and carton. Excellent shape. Covers 10-160 meters minus WARC. Only $350 shipped.

KENWOOD TH-77A 2/440 Dual-Band Hand Held. Checked by Kenwood recently. Modified for extended transmit and recieve, aircraft/2m/440/800mhz. Includes KSC-7 Desk Charger, BT-6 Battery Case, Rechargeable Battery, orginial manual, container, and modification sheets. Shipped to your door for $295.

VHF ENGINEERING PA140/10 2 meter VHF Amplifier. Large heat sinks. No manual, obtained in a trade. Only FM mode. Shipped for $125.

KANTRONICS KAM PLUS, with Host Master II+ software, only $275 Shipped. This is my second KAM and very little use. MINT condition.

Radio Shack DSP-40 Digital Signal Processor, New in Box, Shipped for $60. One opened, used in excellent condition for $45.

TUCKER T-1000 300 watt Antenna Tuner, (same as Vectronics VC-300DLP), shipped at $120.

Looking for an HF AMP for 10-160 to include WARC/MARS. Will trade towards and depends on the model and age, include $$$ for the difference. Will consider 80A/B and Alpha amps -

Also looking for ICOM IC-706 radio with or without separation kit.

2575. FT920 MOD exp

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-30 00:00:00 UTC
From: ROB JORDAN <simply@digital.net>
Message-ID: <687cdhngb1@ddi2.digital.net>
Source record: 157974

Felix Thank you for sending the mod software to me. I had no problem with it at all it worked as it should. the names of the files are different than what was in the documentation and you might want to edit the doc's to use the correct file names (att0326.exe , att0325.txt). this would stop any confusion. I may be able to explain the problems some have had with the software. I am a computer tech who has programming exp. The eaproms used in this radio can only be written to one time. any attempt to rewrite the tx table will lead to serious problems. in as the menu 33 update has worked on some radios this leads me to believe that some radios have the outside table already loaded. so running this software on them would be BAD!
so the first thing everyone should do is turn on the outside tx table and as per the menu 33 instructions and see if there tx will transmit. If so DONT RUN THIS SOFTWARE!
If not then proceed with the software as outlined in the doc's using the correct file names. (att0326.exe , att0325.txt) . Hope this helps you in doing the ft920 mod.

2578. MFJ-259 as freq counter?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-30 00:00:00 UTC
From: turner@safety.ics.uci.edu
Message-ID: <16981.883442177@safety.ics.uci.edu>
Source record: 157977

I am about to purchase the MFJ antenna analyzer. Cool unit.

However, I don't know whether I ought to purchase the 259 with the built in freq counter or go with a cheaper unit and eventually buy an outboard freq counter.

I like to adjust my own BFO freqs on my Ten Tec rigs, and I like to set the IF shift and PBT's on my rigs, and I wonder if the MFJ works well enough to accomplish these things in the ballpark. I have used the economy Startek (around $200?) and it was fine for these tasks. Wonder if anyone uses their MFJ for such simple tasks around the shack.

Dear RF and Earth (DC?) Ground Experts:

I've been operating for years with low power (<= 100 watts) feeding a G5RV into Coax...into a balun, then ladder line to the antenna. My shack is on the second floor of my house...and I have had no TVI, RFI or RF feedback problems worth mentioning.

Within the next several months, I will be feeding a new 140 foot dipole with ladder line and running high power (1kw+ PEP) to this antenna. Several books have suggested with ladder line & high power how important good grounding is...but the reference material has been vague on exactly what constitutes a good ground...especially from the second floor of a house. Here are my questions:

1. How is a good (earth) ground created for the radio, amplifier, antenna tuner from the second floor?

2. Exactly what constitutes a good "RF" ground for a ladder line fed dipole? How is it best (and reasonably easily) created?

3. Are product like MFJ's 'artificial ground' worthwhile?

4. How can TVI, RFI and RF Feedback minimized when taking ladder line from an antenna directly into your radio shack, to your antenna tuner?

Thank you very much for you help.

73 & happy holidays to all,

Jim Nitzberg WX3B

Hi Brian
As for myself, I use an older Icom IC-735 and am quite satisfied with it. I feed a G5RV that is not high enough, meaning 37 feet and that doesn't keep me from doing European DX from the Montreal area. Beware of the Kenwood TS-440, they really have problems. If you want to go one step up, have a look at Kenwood TS-930S rigs, they are much better than my Icom. The IC-735 goes for about $600. and the Kenwood for about $800. Murray Neece has a TS-930S for sale at $795. including shipping. I would seriously look into it. Hope that helps.

I wouldn't recommend it. They are voltage and temperature demanding: if either isn't just right they change frequency like a preadolescent playing hop-scotch!

They are far from rugged in construction. The on-off switch in particular.

They aren't cheap, comparetively. Add up the cost with all the band modules and see where you are.

Someone with experience with the TS-440 will have to comment on it, but they are rummored to have a fatal flaw in the adhesive used to physically stabilize the pll.

Have you considered the FT-757GX mkII?

Source record: 157990

Hi Bob-

Thank you *SO* much for the information! I really appreciate it.

Your comments on the proper input level confirm what I had about decided must be true. If it was a peak flasher, surely they would have labelled it as such. Thank you for clearing that up for me.

The input signal level seems to be quite important when using the Dynamic Peak function......with the input too low, you don't get anything out, no matter how good the incoming signal is. Almost like an old "noise gate". I guess that a "sophisticated noise gate with dynamically adjusted bandwith" is sorta what it is....

>The NIR mode was designed for speech, so you have to back off the NIR
>setting to avoid having the signal processor removing your wanted
>signal.

Ahhhh! That answers a lot of questions! I wondered why the NIR function didn't seem to cut much ice on CW. Seemed like every time it was "about to achieve something", it would haul off and start cutting out bits of the CW tone itself. So I'd reduce the setting and lose the effect that it seemed I was about to get, in terms of improved signal to noise ratio.

>
>DYN PEAK should be set up to improve sig/noise on CW by scrunching in
>the upper and lower cutoff frequencies as shown by the "CW" marks on
>the two freq. controls. Then with the DYN PEAK switched in you will
>get processing enhancement of the signal.

Thank you very much for that info, too. So, Dynamic Peaking is the main noise reduction mode for CW? Other than bandwidth limiting, of course. And I'm already doing a bit of bandwitch limiting: The receiver is a Drake R-4C with noise blanker [best I've ever seen] switched in and a 250 cycle xtal filter online.

The frustrating part during my latest session with the unit was that the signals that it seemed to really deliver improvement on were the ones I could already copy. And that's not where I need the help. What I want the unit to do for me is to move that "audible but not copyable" DX station from the "just barely poor enough for no copy" catagory to the "just barely good enough to copy" catagory. If it'll give me that, then the $350 is well spent.

>
>Unless you are an experienced CW operator you may not realize the
>necessity of first tuning your receiver itself properly by using the

>audio gain up near full and the RF gain backed off to give a
>comfortable level of audio.

Roger on that.
>
>The problem that I have with my receiver, that I think was an
>atrocious design error on Kenwood's part, is that my CW filter (on the
>TS-450 its a 200 HZ filter in the 455 kHz IF) is not centered properly
>in the IF passband for a CW signal, When you tune to get a beat note
>that is at the same frequency as your transmitting sidetone, the
>received signal is outside of the filters passband. How about that
>for stupidity.

Stupidity taken to the extreme, I'd say. I've never operated a TS-450 so I
can't offer a solution, but I would agree that if the sidetone is a
different frequency from the beatnote and they can't be made the same, and
if there is no other reference point to zerobeat an incoming signal against,
then that is a serious design error.
How would you ever zerobeat an incoming signal?

That's one thing I like about my old Drake C Line: you can have any beat
note that you want by varying the IF shift control. You can make it the
same as the sidetone if you want, or not. And, since the transmitter has a
"spot" position that will let you zerobeat your transmitter against the
incoming signal, it doesn't matter if the sidetone is the same frequency or
not.

Well, again, thank you SO much for the info! I really appreciate it.

JPS is sending me a book and hopefully I'll have it tomorrow. They were
nice as they could be, and were very distressed that the wrong book had been
packed with the unit. Seem like really nice folks.....

73 and GL DX!

Hello--

I own a UHF repeater and wanted to add a link. Therefore, I am looking for a "simple" repeater. If you have a radio that can be easily converted to a repeater and could be used as a link (such as a UHF GE MVP) or a radio already converted (even better) let me know. I am not looking to spend a lot of money, but we can talk. Do not reply to this message directly. Send response to:

rglaser@indiana.edu

Thanks and 73-

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and

feature priority scan and a separate trimmer capacitor for
each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Hello Jim,

You have already experienced the fact that you are not having trouble
with your existing ground system. What you may not realize is how
complicated your actual RF ground path really is.. Note that you
"probably" have a connection from the coax shield, or from the tuner
chassis, or the rig's chassis to your AC housepower ground, which
eventually finds its way to earth via different wavelengths of
"ground" wires that are distributed throughout your house. The many
such wires create "tuning stubs" at a variety of frequencies and cause
the RF impedance seen looking into your "ground" to vary all over the
map with frequency. The effect of this is that you can have

everything from a "good" ground (low impedance) to a "poor" ground (high impedance), depending upon the frequency.

This "RF ground" impedance is somewhat irrelevant if there is no common mode RF trying to flow between your antenna system and that RF ground. So, the "problem frequencies" will be those frequencies where you have a poor RF ground AND RF currents flowing along your feedline and into that ground.

My suggestions for keeping your system free of problems are as follows:

1) Go forward with the plan to have a "balance" antenna with a "balanced" feedline. That's the best way I know of to reduce common mode currents or "antenna currents" in your feedline and ground system. This requires symmetry in dipole dimensions and height above ground and distance from large conductors (other antennas and wires). Theoretically, you can make an RF ground unnecessary.

2) Implement the traditional method of minimizing the effects of common mode currents by using a balun at the transition from balanced line to coax, but keep in mind that the effectiveness of the balun depends on its common mode impedance in relation to the impedance of the common mode path at that point. For example, if the balun offers 500 ohms of common mode impedance, but is placed at a point where the common mode path impedance is 5000 ohms, would it do much good?

3) Common mode current can be shunted off to earth and kept out of your rig and house wiring by judicious placement of the balun at a point low to the ground and earthing the unbalanced side (coax) at that point. This does NOT reduce common mode currents on the feedlilne, it simply provides a path for them that keeps them out of your rig and house. Note that this does not keep the common mode current from radiating and disturbing the radiation pattern of your dipole.

4) Reduce any induction of RF into the coax from balun to rig by running it orthogonal to the dipole. It won't pick up any radiated RF unless it has a component that is parallel to the dipole. You can't do anything about all the RF that will be induced in your house wiring and telephone lines and TV antenna and feedline, etc., but if you have the real estate for it, I have found that keeping the antenna itself 130' feet from the house does wonders for TVI and Telephone interference.

Don't confuse any of the with an adequate ground for lightning and static discharges. That's another problem that should be addressed separately, but an obvious place to work on that problem is right there at the balun where it's within a few feed of earth. I'll leave you to work that out by yourself. I put a coax switch in each line coming into the house that takes the outer shield and inner conductor to the nearest earth rod whenever the antenna is not in actual use.

From: "Kelly D. Leavitt" <kdl@planet.net>
Message-ID: <34A90B19.C96F97F2@planet.net>
Source record: 158002

Hello:
I have already searched the various and sundry mods sites for this info but I cannot find it. I just received one of the TenTec 10m to 2m trasverter kits as a gift. I would like to drive it with my 736 through the full 2m band. However, I need to open up the xmit on the 736 to do this. Does anyone know the appropriate mods to do this?

As far as I know, it is legal to drive a transverter this way.

Thanks in advance,
Kelly

New condition with book and original box.

Has been in case since bought. Also have a miracle baby ant and vinyl case to go along.

Asking 160 + shipping (If you don't like it make me an offer)

160 may sound high. But, you could rebox this unit and I guarantee it could sell for new!

Mark,

The most likely problem with your set is bad electrolytic filter capacitors (part of the high-voltage power supply). These do not age well and go bad faster with disuse. Also, that radio is crammed full of small tubular paper/wax capacitors that don't age well and may need replacing. If the set was working when last used, you probably don't have a bad tube as long as the set was not dropped or banged around. Tubes don't go bad with age.

If you're unfamiliar with replacing or reforming electrolytic caps, try to find a ham that knows tubes or a collector of antique radios in your area. Failing that, try a high-end audio shop or a music shop that repairs guitar amps. They will likely be able to replace the caps for you, at a cost, however.

Try getting a book on old radio repair. While high-voltage is dangerous, you can easily do this job safely if you follow the precautions outlined in all these books. You might even enjoy it! Look at http://www.tubesandmore.com for repair books.

Good luck,
Steve Robertson, KE4OH

This is a very simple matter to build a fixed attenuator in a small
Bud box using two connectors and 3 resistors in either a "Tee" or a
"Pi" configuration. The equations are not difficult and may be found
in several references.

I will give you a "Tee" design that is specifically for a 9.5 db loss,
i.e., 100 watts in and 11.1 watts out, and I will base it on a 50 ohm
(Z) impedance.

R1 and R3 are the series resistors of the "Tee" and R3 is the shunt
resistor.
R1 = [Z1 (N+1)/(N-1)] - R3
R2 = [Z2 (N+1)/(N-1)] - R3
R3 = SQRT(N*Z1*Z2)/N-1

Where Z1=source impedance
Z2=load impedance
N= ratio of power flowing into the attenuator to power delivered to
load.

For our design the equations simplify as follows:
Z1=Z2=50
R1=R2=50(N+1)/(N-1) - R3
R3=2*50*sqrt(N)/(N-1)

For N=9
R3 = 100 * 3 / 8 = 37.5 (which will dissipate 33.3 watts)
R1=R3= 50 * 10/8 -37.5 = 62,5 - 37.5 = 25 ohms
R1 (the input resistor) will dissipate 50 watts, and R2 will dissipate
less than 5 watts)

In order to make the attenuator box symmetrical (independant of which connector is input and which is output) it would be necessary to use 50 watt rated resistors for both R1 and R2.

If you want to make the attenuator using several lower wattage resistors, then a ladder design is more appropriate. I can supply that design upon request. Please specify what wattage of resistors you can obtain and I will design a ladder attenuator that uses resistors at 1/2 their rated wattages (reasonable safety factor).

Hello Paul
Sorry I lost your original post so I will post this as a response to
Mark's post.
The following is a slightly modified version of an article that I
posted recently for a similar request.

I have the TS-450 rather than the TS-850, but I would be very
surprised if there were any differences in the 6 pin connector ACC-1.

In fact, the User's Data for the IF-232C, itself, says that it is
designed for transceivers capable of computer control, such as the
TS-940S and the TS-811/711 series.

I have used the Kenwood IF-232C External Control Interface with it,
and it works fine.

Here's the pinout per my data sheets:

1 Signal Ground
2 Transmit Data (Output) (TXD)
3 Receive Data (Input) (RXD)
4 Transmit Enable (Input) (CTS)
5 Receive enable (Output) (RTS)
6 N/C
Note that the meaning of "Transmit" and "Output" refer to signals from
the transceiver to the PC.

The data sheet also indicates that whereas the PC's serial port is
RS-232C (-12v to + 12v), the Transceiver uses TTL (0 to +5). I guess
that explains why it is you can't just connect the two ports directly
together - Hi.

One other point of interest. As is the case with almost all RS-232 devices, remember that the connection between the Transceiver and the PC MUST connect Transmit Data to Receive Data and vice versa. Likewise the CTS/RTS lines are also cross connected. Well, that's consistent, isn't it?

Don't forget which pins are which on the PC side. Depending on whether you have a 9 pin or 25 pin connector, as follows:

Signal 9pin 25pin

TXD 3 2
RXD 2 3
CTS 8 5
RTS 7 4
GND 5 7

I should point out that the IF-232C unit uses a 4 circuit Opto-isolator chip, a power regulator chip, and two chips for line driver/conversion functions. It does a great job with a cable length of 100 feet, so I'm satisfied that it is noise free. I can't remember for sure what software I used but there were two shareware programs that work fine, and I got them from the QRZ CD-ROM.

If there's anything else you need, don't be bashful.

P.S. I have used two different shareware programs with this interface over a 100' cable and it works fine.

I have an NIR-12 and really like it.

Might not be the best for SWL, tho. Max audio bandwidth is around 3.5 kHz. The new and maxed out Timewave unit (599Z?) has a wider bandwidth and might be a better choice for AM. Plus it is a bit newer technology.

Hi Tim,
Here is my canned answer to your search for the TR7 SL-6000.
Good luck
Tim KF8XW

Drake TR7 and broadcast reception filters
...
In order to get good fidelity on AM broadcast reception you need the SL-4000 or SL-6000, 4 and 6 Kc filters which are hard to come by. You can get good reception of AM broadcasts by a faily simple trick (filter board modification). Take out the filter board (what all the filters are soldered to) and in the position where you would put the 6 kc filter, solder in a 390ohm resistor diagonally across the footprint instead.

The filters only have 2 real pins (in and out) with the others being grounded so its not hard to figure out where the resistor goes. This resistor simply completes the signal path thru the filter board. The resulting bandwidth is about 10-12 kc which is the bandwidth of the previous stage IF amplifier. Anyway you'll get beautiful fidelity by doing this. The additional capability is worth it. Other nearby strong stations will bleed thru over a wide bandwidth but this is a minor inconvenience.

Some owners feel this resistor in some way destroys the fine Drake radio.
I don't see it that way. You're just completing the signal path by inserting the proper resistance of which the actual filter would have had (note, you would have had to solder that new filter in too, so whats the difference).

By the way don't move the 2.3kc filter from the first position on the left as it must be there fo the radio to operate correctly. It is used in both the RECEIVE AND TRANSMIT paths, so must be in that position.

2616. Dual-Bander VFOs [TM-V7]

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-31 00:00:00 UTC
From: Todd Schroder <schroder@erols.com>
Message-ID: <34AA8464.2C8A@erols.com>
Source record: 157817

I just purchased a Kenwood TM-V7 dual-band radio. It is my first 'true' dual-bander (I also have an FT-50.) I am pleased with it so far.

I had assumed that a dual-bander was essentially two FT-50s or such stuffed in a box with big power amps. When it comes to the TM-V7, my assumption was wrong. Although you can receive V/U V/V U/U, you can not receive VHF _and_ UHF on the same VFO. Therefore, I can only receive either VHF channels _or_ UHF channels but not both on the same VFO. For instance, if I want to monitor one channel on the left VFO, and scan all of the other channels (consisting of both VHF and UHF frequencies) on the right VFO. Is this true of all dual-banders or are there units which allow V/U receive on either VFO?

Thanks for your time,
Todd WB3HWN

1/2, 1" flat bar for the cross members
any information would be greatly
>appreciated
thank you Larry

First of all, Larry, I am in the dark as to what constitutes a small tower. Second, understand that I like to build stuff to last a millenium. I have been accused of overbuilding stuff. Third, are you going to weld or use nuts and bolts?

If I were building a towerof 30 to 50 feet, I would use 1 1/2 angle for the corner vertical members and 1 1/4 x 1/4 bar stock for cross pieces, maybe going with 1 1/2 wide for the lower 20 feet of a fifty footer. This is assuming welded construction, of course, which is the only way I would go. Nuts and bolts holding stuff together that I will be climbing on give me the willies. Second, the rule of thumb I would go by is for 1 1/2 feet of width between corners for every ten feet of height, making a fifty footer 7 1/2 feet wide at the base. Of course the tower would taper to whatever size is convenient for housing rotors, etc at the top... a foot square is not unrealistic. The cross members should run diagonally up the sides forming a series of triangles.

One-piece tip-up or sectional construction? Sorry... I won't make a hard and fast reccomendation here. There are a lot of safety issues involved. One thing to consider is how big a truck or tractor you will need to tip up the tower and how much real estate you have. Remember the fourth law of motion... stuff falls. Small stuff hurts when it falls on living things. Big stuff hurts more. Really big stuff hurts really really bad. Towers fall (oops! bad choice of words?) into the really big stuff category. Plan your tower erection before you plan it's construction, with safety being your overriding concern.

My tower would be square for the simple reason that angle iron is 90 degrees and I am comfortable with butt-welded construction. You could go with a triangular structure with the same materials and have abuot 3/4 the weight and still have about 90% of the strength due to the inherent rigidity of the triangle. The base should be very heavy steel, and I would hesitate to use less than 1/2" stock. The reason is: rust! My hypothetical tower would be an unguyed structure with about three feet of it buried in concrete, and it WILL

rust, robbing the structure of strength where it is most needed. Also, stick a couple of pieces of leftover stuff in the base pour. Paint them exactly as you do the tower itself. When you can bust those pieces off with a sledge hammer it will be time to tear down your tower. Hopefully this would be about 50 or 60 years from now.

If you do not have neighbors close by, you might want to use a marine grade epoxy-base paint for a base coat, and a good marine alkyd enamel or chlorinated rubber paint for a topcoat. Be careful... this stuff is a lot more toxic than household latex enamel! Follow the directions TO THE LETTER!

If you use galvanized stock, beware the fumes from burning zinc.. these fumes are somewhat toxic, so make sure you are upwind when you burn or weld.

New to welding? Don't be intimidated by it. Basic burning (cutting with a torch), grinding, and arc-welding techniques can be learned in a couple of weeks if you have an experienced welder to lead you down the right path and critique your practice pieces. Gas welding takes a bit more skill and more time to learn. Stick with arc.
The keyword here is penetration. You want to fuse the two pieces you are welding completely through and through, resulting in a true monolithic joint. Such a joint will sacrifice practically nothing in strength. Try to break your practice welds with a hammer, and look at how well your weld penetrated the joint. You should have practically 100% after welding both sides. You will probably have to cut through the weld to examine it if you have done it right.

Another thing to watch for is pinholes and undercutting. The former is caused by impurities buried in the weld, and the latter by too hot of an arc. When you lose your arc, always chip and wirebrush the slag away from where you will start again. Your finished weld should be a continuous rippled ridge, like a tipped-over stack of dimes and is the result of correct arc distance, current, rod angle, good motion and puddle control, and a host of other factors. If a weld looks good, it probably is good. Pretty welds are usually strong welds, assuming good penetration.

Before you go out and buy a bunch of equipment, allow me to warn you that you will want a DC machine rated at 125 amps for the size material I have mentioned. Rods can be either of the two most popular types, 6011 or 7018. The 6011 is cheaper and you can get buy with a smaller machine, maybe even 100 amps. The 7018 is easier for the novice welder to use, and it lays down a pretty nice bead with very little practice, but costs more and requires higher current. It is also stronger.

Watch your eyes! Not only when you are welding and burning, but also when you are grinding or chipping slag. Slag is almost like glass, and flies orr the weld with incredible velocity.

Make sure you have an experienced welder check out all your equipment before proceeding with the learning process, and use gear in the manner he does. Follow all manufacturer's directions and heed all warnings. Be Safe!

The tower I have described will be plenty strong enough to climb on, and should be OK in an ice storm or heavy winds if you pour a nice big base. It should

last a long time with proper care, and you will have a structure to brag about.
I'm getting misty eyed right now wishing I was building it....

Audrius,

I've read that some of the FT-50's have two incorrect resistors inside
that cause them to drain approximately 10 milliamps while turned off
as opposed to the few microamps that they are supposed to drain.
Yours may be one of those!

Thanks for your response and the others on the size issue.

Hello to all,
I have a Kenwood VS-2 voice unit NEW in the BOX (unused).
I sold my TS-450S before the VS-2 came in the mail. According to the HRO fall/winter catalog the VS-2 will work with the TS-690S, TS-850S, TS-950SDX and of course the TS-450S.
The VS-2 sells in the catalogs for $69.95. I am asking $45.00
The VS-2 comes with the box, instruction manual and the VS-2 still in the factory sealed bag.
I prefer a money order. Add $3.00 for US Post Office Priority mail (2-3 day delivery).

Please e-mail me direct at:
mrusso@hoflink.com

Happy New Year

Thanks, Mark N2FLF

From: "Tom C. Brown, Jr." <tcb@netdoor.com>
Message-ID: <68ef9m$b4r$1@usenet48.supernews.com>
Source record: 157838

Hi David-

I think you'd like the NIR-12. I got one for Christmas but have been slow getting up to speed with it since the wrong book was packed with it.

That error has turned into a real endorsement for JPS's service, though.....they were very distressed to find out that I had the wrong book and sent me one overnite [same day shipment] at their cost. I didn't even have to ask. You can't get customer service any better than that. Really nice folks, too....

Anyhow, last night was the first on-air use of the NIR-12 for me since getting the manual, and it was quite a success!

I [like you] operate almost entirely CW with a very small amount of SSB mixed in, and wanted the unit primarily to change a weak DX signal from being "barely unreadable" to "barely readable". Well, it works!

I was tuning up and down the 160 meter DX window and found a station from England that was right at the noise floor. I could tell that there was a CW signal there, but there was just no way to copy it at that level. You know how 160 is.....even when it's "quiet for 160", it's not *that* quiet! :-) He was about an S4 [avg] but the noise was all over the signal and I just couldn't sort it out by ear. And I already had my R-4C switched to 250 cycle bandpass and the 4-NB noise blanker online.

So, I adjusted the bandpass controls on the NIR-12 as the book recommends [set freq and bandwidth to CW positions] and engaged the Dynamic Peaking subsystem [the MED position proved best for this case] and brought the NIR function up until any further advancement of that control started to "cut up" the signal. Well, at that point, the signal amplitude had been somewhat attenuated, but the noise had been attenuated much more. The signal to noise ratio had been increased enough to take the signal from "zero copy" to "marginal copy".

Hey, that's what I wanted the thing for!!!

It single-handedly made the QSO possible. Without the NIR-12, it was one of those situations where I would not have called the DX station at all because I'd'a never been able to even tell if he had answered me, let alone have a real QSO.

I'm sold!

If you happen to buy one, please let me know and I'll be glad to help you get up to speed with it. Since I started out without a manual, I posted a request for help here on the newsgroup and got LOTS of very good information

from folks in the group. I'm not "experienced" with it yet, but I've already gotten amazing performance from the unit.

The main tip I'd offer to any new owner at this point is this: the NIR control and the input audio level are more critical than I originally thought. A little adjustment can make a lot of difference in intelligibility. Go slow and listen to the changes carefully.

And thanks to all those here on the group that helped me out!

GL David!

73, Tom AE5I

In an e-mail message dated 97-12-31 11:03:18 EST, phil writes:

<< When you mentioned that r-shack protable model adn mentioned it worked in VHF, what does that mean? Does it restrict me @ all with what I can do? You mentioned to communicate long distance Id need a good antennae and a HF 30mHz and under 'copnnection' does this model, the portable one, hjave this feature? There is a HAM repeater in the town where I live (its an 8,000 people, small town, so the repeater has to be within @ five miles of my house)

Thanks!
phil
Hope Im not buggin too much!
>>
Well Phil, VHF is simply any frequency between 30 and 300 MHz. 2 meters is 144 to 148 MHz, so is right in the middle of VHF. VHF is "mostly" line of sight, which is why there are repeaters for VHF and UHF... If you can hit the repeater, and another station that you cannot work can also hit the repeater, then you can work him through the repeater, extending your range.

I must have made a typo... I touch type and sometimes I watch TV while I answer my mail. "copnnection?" hmph. For long distance direct radio communications, you want HF, which is all frequencies between 3 and 30 MHz. The best long distance band is 20 meters, which you need a General or above license to work. However, the Novice/Tech Plus portions of 80, 40, and 15 meters are capable of working the world too. As the sunspot cycle progresses, 15 meters and even 10 meters will open up big-time. If you want to work HF with a Tech Plus or a Novice license, I suggest a combination of 40 and 15 meters. The reason for this is that a half-wave dipole antenna cut for 40 meters is about 1 1/2 wave on 15 meters, and therefore resonant. You can use the same simple wire antenna on both bands, using 40 meters in the evening and early morning, and 15 meters in the afternoon. as the sunspot cycle progresses, 15 will be open later and later into the evening.

Now for VHF, yes a good antenna is needed as well, but there is only just so much you can do with even a great antenna. Remember the upper bands are "primarily" line-of-sight.

try to track down the repeater owner or trustee and get enough information so you can buy a rig that can access the repeater, if that is what you want to do. What a bummer to buy a 2 meter rig only to find out the repeater you were counting on using is up on 70 cm!

There are circumstances when VHF, especially 6 meters but also sometimes 2 meters, can be used to make contacts of hundreds of miles. As you study, upgrade, operate, talk with other hams, and read everything you can get you hands on regarding propogation, you will learn about stuff like sparodic-E,

aurora propogation, meteor trail propogation, diffraction, and also exotic modes like moonbounce. You can also work distant hams via amateur sattelites, but you will want a dual band rig or two rigs... Sattellites use seperate bands for receive and transmit. A repeater can be linked with other repeaters to extend a ham "network" over a couple hundred miles, but this is not done routinely. This is what I mean by "primarily" line of sight; yes, VHF CAN be used for contacting distant stations, but not dependably with simple gear. If you wanna be a world-beater, you need to think strongly about HF.

Do pick up a copy of "Now You're Talking!" at the very first opportunity. It will present info that you need to know but don't know enough to ask yet regarding licensing, station setup, propogation, and operating. Radio Shack should have it. If not, look for the Gordon West book for Novice and Tech, or get it from ARRL.

We really should move this thread back to the newsgroup, so others in your situation can benefit from the discussion as well, and so other hams with a different perspective than my own can give you answers from their point of view. In fact, I think I will post this... hope you don't mind.

Those sites again for the benefit of those who lost the thread when we went e-mail with it are:

http:/www.hky.com/~sanfordb/learn_morse.htm
http://www.dutch.nl/wilbwk/index.htm

These sites have a lot of good links to shareware downloads and other great CW-related and genaral ham-related sites. There are a lot of hints and tried/true methods for getting and increasing code proficiency from those who "been there/done that".

also check http://www.arrl.org/index.html
and /catalog/index.html
and /iands.html
for W1AW practice broadcast schedules, exam sites and dates, license study materials, help for beginners, and joining the league.

73 Phil and group

ps no Phil, you are not being a bother at all. It is a pleasure to help you find your way, but here on the ng other hams can also have the same pleasure, and other new or wannabe hams can benefit from following the thread.

I always wanted to build a small tower 30ft temporary?? for VHF.
I wanted to take aluminum top rail for chainlink fence 10.5 ft long. and tie
it together in a triangle with bolts thru an aluminum
plate or block of some kind. since the ends are tapered the sections could
slide together then be bolted. It would not rust
be light, cheap and portable. since it would ve for vhf it would
not need to hold really large antennas. good luck..

Perhaps your question should be more like this:

Which is better, the FT-1000D or the IC-775.

At least make it a more even playing field...

Pete

>
> Former General Inspector - Signals on the Norfolk & Southern
>
> Gary

Gary, what leads you to this conclusion? My ICOM 706MkII Instruction Manual says nothing of the sort regarding ICOM amplifiers only!

Stan: Look at page 6 of the manual. Pin 2 goes to ground. Pin 3 is labelled HSEND in the book, and it goes to ground when transmitting on the HF through 6 part of the radio. It also acts as an input -- when brought to ground potential (actually -0.5 to +0.8 volts) it will cause that side of the radio to start transmitting. Pin 7 is called VSEND. Like HSEND, it goes to ground when transmitting, and causes the radio to transmit if grounded. Only this time on the 2 meter portion of the radio.

My RF Concepts RFC2-117 can be triggered with either a positive voltage (the default) or by grounding an input (selected with a jumper change). I haven't moved the jumper and connected the 706 to the 2-117 yet, but I certainly plan to do exactly that, and do not plan to have any problems with either the radio, the amplifier, or my warranty...

If you have no luck with a commercially-available unit, they shouldn't be too hard to make. A friend of mine has a 8 watt 160m HT which is a direct conversion/double sideband transceiver. It worked quite well provided you didn't come into contact with the h/held's antenna, which could give a nasty zap!

>> bulky compared to using the 40B battery?

In my opinion, yes it is. I bought both batteries at first, then got rid of the 41 because it made the radio think as a brick. I measured about 3 watts output with the FNB-40 and 5 watts with the FNB-41, and I felt the extra thickness was not worth it for less than a 3 dB increase in output power.

I have the opportunity to buy a near mint Alpha 76PA (3 tube, standard transformer) at a good price. I understand the replacement tubes are expensive and hard to get? The tubes in this amp have hardly been used and show no discoloration and the rubberized chimneys are just like new but I wonder what the average lifespan of them is? Are there any special problems with this amp? Any info would be appreciated as I have to make up my mind in a couple of days.

Thanks

Ed Scissons VE5VX

What test leads do I need for my Heath IO-4540 Scope, please?

I have acquired this scope and hope to learn with it. I have most of the manual, but no info about what test leads are appropriate.

Anyone familiar with this thing and can offer advice?

BTW: I do have a bnc inline "Neg DC Out, Telonic Berkeley, Crystal Detector, Model 8551, .1 - 1500 mHz 3v max." device. Is this somehow useful with the scope? (I'm guessing it would rectify RF so it could be viewed?)

AFAIK, I bought mine two weeks ago, and there's a backorder of 'em...
Probably Dick Smith is replacing their FT-50's with VX1R's (ie. DSE isn't
going to import FT-50's anymore)...

But, I'm just new at this radio game...

The FT-51R can indeed receive in configurations of V/V U/U V/U or U/V on
either side of this radio. I dont remember if it can do it without the
wideband mod or not, (I got it long ago). What it cant do, is receive on
the same band that it is transmitting on while transmitting. the second
you stop xmitting, you can listen to 2 freqs again. (you cant transmit to
the input of a rpt while listening to the output of the rpt at the same
time.) the radio has features whch allow you to set one band as a higher
prioity than the other, which causes the other band to be either the same
volume, half as loud, or totally muted when the priority band is receiving
an actual transmission.

2683. more problems with FT-8100R

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-31 00:00:00 UTC
From: Wilco de Bree <wilcodeb@xs4all.nl>
Message-ID: <34AA0E43.9DDE15A5@xs4all.nl>
Source record: 157940

When using the Crossband Repeater function I have the following problem.
The signal from VHF-in to UHF-out sounds great, but if the signal is
from UHF-in to VHF-out a lot of noise is coming with a poor modulation
out of the speaker. Both signals are strong enough to get a fine signal
by using simplex mode. The antenna has a SWR of 1:1.

Did someone experienced the same problem and what to do about it?

Laws regarding operation of radios capable or receiving police frequencies very state by state. Generally, licensed amateur radio operators are excepted from the general prohibition. In Michigan, all licensed amateur radio operators except Novice class may have "scanners" in their vehicle but my not use them for "unlawful" purposes.

Ed,

The tubes are getting hard to get and new cost about $300 - $400 USD.
Svetlana has started making them but they are in the same price range.

These tubes are not know for their long life. They were short-lived in
commercial practice because of this. They have a short (by amateur
standards) life when used at rated output (less than 2000 hours). Most hams
run them far beyond rated out with the resultant VERY short life. They are
only rated for 500 watts each in PEP service. That says for the 76 PA 1500
watts max. Alot of hams run these amps at 2000+ out, of course they buy
new tubes every year or so...

The 76PA is a very good amplifier. Folks are now converting them to a pair
of 3CX800A7s which have a much longer life span. Check out Dick Byrd's web
page at http://n4uq.home.mindspring.com Lot's of info on Alpha upgrades
here.

Hope this helps.

2695. Re: KW TS440 PC Interface Details ????

Newsgroup: rec.radio.amateur.equipment
Date: 1997-12-31 00:00:00 UTC
From: Al Williams <alw@al-williams.com>
Message-ID: <uFGdxsfF9GA.78@ntdwwaaw.compuserve.com>
Source record: 157952
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

The '97 ARRL handbook has this info in it. There is an article called "A Trio of Transceiver/Computer Interfaces". It has a Kenwood IF box and 2 others (Yaesu and Icom). Would make great comparison.

The Yaesu and Icom boxes are nearly identical. The Yaesu interface is just a 3 wire (TX, RX, GND) RS232 level converter using a MAX232 and some buffering (7417).

The Kenwood uses RTS/CTS handshaking and the polarity is backwards. This makes it easy to optoisolate the thing and that's what the handbook's plan calls for. Other than that, the circuit is just a MAX232 level converter, but you have to convert RTS/CTS also.

Hope that helps. You can find a brief description of the handbook and all that at http://ourworld.compuserve.com/homepages/Al_Williams/book.htm
